

Fact Sheet
People with Intellectual or Developmental Disabilities Living in Nursing Homes in
December 2000
7/16/2002

Analysis by Sheryl A. Larson and K. Charlie Lakin

This table shows the results of a preliminary analysis of the CMS Minimum Data Set. Data for the last two quarters of 2000 were analyzed to develop this table. This analysis used very conservative definitions of mental retardation and developmental disabilities. Individuals were identified as having MR/DD only if the admission screening said the person had MR/DD or ICD codes in the data file indicated that the person had Mental Retardation, Spina Bifida, Down Syndrome, Autism, Edward's syndrome, Klinefelters Syndrome, Patau's syndrome, Phenylketonuria, Microcephaly, Anecephalus, Sex Chromosome Anomaly, Congenital Hypothyroidism, Tuberous Sclerosis, Prader-Willi Syndrome, Cornelia de Lange, Bardet-Biedl. Individuals with epilepsy, cerebral palsy and hydrocephalus were identified separately. The final column of the table shows the combined number of people with MR/DD, epilepsy, cerebral palsy or hydrocephalus.

Based on this analysis, we estimate that 35,155 individuals who lived in nursing homes in December 2000 had either mental retardation or developmental disabilities. The proportion of nursing home residents who had MR/DD ranged from 1.3% in Florida to 4.3% in Arkansas. Future analyses of this data set will examine the impact of using more complex definitions to identify individuals with intellectual or developmental disabilities.

State	Total Nursing Home Residents	Total with MR/DD		Total with Epilepsy		Total with Cerebral Palsy		Total with Hydrocephalus		Total with MR/DD, Epilepsy, CP and/or Hydrocephalus
