## Acknowledgments

This report is based on statistics gathered and analyzed as part of the National Residential Information Systems Project on Residential Services (RISP). The authors wish to thank the Administration on Developmental Disabilities (ADD), its Commissioner Pat Morrissey, and our Project Officer, Jennifer Johnson, for ongoing support of this project and its various activities. We also appreciate the supplemental support received from the Center on Medicare and Medicaid Services. This and other projects of the Research and Training Center on Community Living are greatly assisted by the core support of the National Institute on Disability and Rehabilitation Research, and our Project Officer, Dawn Carlson. Many people other than the chapter authors played important roles in acquiring, analyzing, and describing the data summarized in this report. Brian Burwell of the MEDSTAT Group generously provided ICF-MR payments from CMS 64 forms that are summarized in Chapter 9.

As always, we are totally indebted to the more than 300 state and individual facility respondents who provided the statistics used in this report. Clearly this report would not be possible without their knowledge, expertise and generous assistance. Some of these talented individuals are listed below. A special thanks also to the CEOs and staff of all the 183 large public residential facilities surveyed.

#### State Residential Services

## Number and Size of Residential Settings

The number of state residential settings decreased in Fiscal Year 2004. On June 30, 2004 states were directly operating 2,587 residential settings housing persons with intellectual disabilities and related developmental disabilities (ID/DD), 157 less than in the previous year. Of these 2,553 were facilities, special units or other settings primarily serving persons with ID/DD and 34 were facilities primarily serving persons with psychiatric disabilities. Nine-tenths (91.0%) of the state ID/DD settings had 15 or fewer residents, a proportion that decreased slightly from June 2003 (91.4%).

On June 30, 2004 every state except Alaska, District of Columbia, Hawaii, Maine, New Hampshire, New Mexico, Vermont, and West Virginia was operating at least one large state ID/DD facility. New Hampshire closed its only large (16 or more residents) state ID/DD facility in January 1991. In 1994 Vermont, Rhode Island and the District of Columbia closed the last of their large state ID/DD facilities, but in 2004 Rhode Island reported three state ID/DD facilities, each with 16 or more residents. New Mexico closed its last large state facility in 1995 and Alaska did the same in 1997. In 1999, Maine's last large facility dropped below 16 residents and West Virginia and Hawaii closed the last of their large state ID/DD facilities.

The number of state community residential settings decreased in FY 2004 and New York remained by far the largest operator of state community residences. State community settings (15 or fewer residents) decreased by 6.2% (157 settings) to a total of 2,324 in Fiscal Year 2004. At the end of Fiscal Year 2004, New York had 1,005 state community settings or 43.2% of the national total.

#### Number of Residents

The population of large state ID/DD facilities continues to fall. The population of large state ID/DD facilities on June 30, 2004 was 41,653, a decrease of 2.8% from June 30, 2003, continuing a trend first

evident in Fiscal Year 1968. Between Fiscal Years 1980 and 2004 large state ID/DD facilities' average daily populations decreased by 88,968 (67.9%) to 42,120 individuals. More than eighty percent (41) of all states reduced the average daily populations of their large state ID/DD facilities by 50% or more during the period.

The population of state community residential settings decreased in Fiscal Year 2004. During Fiscal Year 2004 the number of persons residing in state community settings (15 or fewer residents) decreased 4.6%, to an end of year total of 12,350 persons. The average number of residents per state community setting increased slightly to 5.3 from the 2003 level of 5.2 residents. New York accounted for three-fifths (60.8%) of all residents of state community settings.

Nationally, the population of large state ID/DD facilities per 100,000 of the general population continues to fall. On June 30, 2004 there were 14.2 persons in large state ID/DD facilities per 100,000 of the general U.S. population. This compares with 15.2 in 2003; 16.1 persons in 2001; 18.0 in 1999; 19.0 in 1998; 20.0 in 1997; 23.5 in June 1995; and 99.7 in June 1967. Placement rates in 11 states were 150% or more of the national average, while in 17 states they were half or less of the national average (including 0 in 8 states).

Large state ID/DD facility average daily populations were cut in half in the U.S. and in most states between 1990 and 2004. The average daily number of persons with ID/DD living in large state ID/ DD facilities decreased by 50.1% between Fiscal Year 1990 and Fiscal Year 2004. The largest proportional decreases in large state ID/DD facility average daily populations were, of course, in Alaska, the District of Columbia, Hawaii, Maine, New Hampshire, New Mexico, Vermont, and West Virginia which closed all their large state ID/DD facilities. In addition, 23 other states reduced their large state ID/DD facility populations by more than 50% over the fourteen-year period. **Rates of large state facility depopulation have slowed in the last three years**. The average daily population of large state facilities decreased by 5.2% from the beginning to the end of the Fiscal Years 2002-2004 period. This was the slowest decrease of any three year period in more than 30 years.

#### Admissions, Discharges, and Deaths

Admissions to large state ID/DD facilities increased in 2004. In Fiscal Year 2004 an estimated total of 2,215 persons with ID/DD were admitted to large state ID/DD facilities, an increase of 4.6% from the previous year. Admissions were equal to 5.3% of the average daily population of these facilities during the year. Four states reported no admissions to their large state ID/DD facilities. Nine states reported admissions exceeding 10% of their average daily population.

**Discharge rates of large state ID/DD facilities decreased in 2004.** In 2004 an estimated total of 2,534 persons with ID/DD were discharged from large state ID/DD facilities, a decrease of 5.4% from 2,679 in 2003. Discharges were equal to 6.0% of the year's average daily population of those facilities (as compared with 6.2% in 2003. In 2004, 3 states reported discharges that equaled 20% or more of the average daily population of their large state ID/DD facilities. Fifteen states with large state ID/DD facilities had discharges less than 5% of their average daily population.

The death rate among residents of large state ID/DD facilities in 2004 (2.0%) was within the range evident throughout the past decade. In 2004 a total of 887 persons with ID/DD died while residing in large state ID/DD facilities. The 2.1% death rate of 2004 is above the 2.0% death rate of 2003 and 1.8% in 2002. Death rates were 2.0% in 2001, 1.9% in 1999 and 2000, 1.7% in 1998, 1.7% in 1996, 1.5% in 1994, 1.4% in 1992 and 1.4% in 1990. The small but steady increases in institutional death rates in recent years may be associated with the aging of large state ID/DD facility populations.

#### Expenditures

In 2004 expenditures for care in large state ID/DD facilities continued to increase and reached a national annual average of \$138,996 per person. Between 2003 and 2004 average annual expenditures per resident in large state ID/DD facilities increased

6.0% from \$131,122 to \$138,996 (or an average of \$381 per day). The increase controlled for inflation was 3.2%. Twenty-five states reported annual expenditures per resident exceeding the national average. The increase between 2003 and 2004 (6.0%) was more than the 4.3% increase from 2002 to 2003. The average annual increase for the period 1990-2004 (6.7%) remained well below the 15.0% average annual increase between 1970 and 1989.

#### Facility Closures

The closure of large state ID/DD facilities continues. Four large ID/DD facilities were closed or consolidated in Calender Year 2004; two in Alabama, one in Georgia and one in Missouri. Between 1996 and 2004, 49 large state ID/DD facilities were closed, an average of 6.1 closures per year. This compares with an average of 1.25 per year between 1976 and 1979, 3.5 per year between 1980 and 1983, 2.75 per year between 1984 and 1987, 8.75 per year between 1988 and 1991, and 12.5 per year between 1992 and 1995. Florida, Georgia, Indiana, Ohio and Pennsylvania project that each will close another large state ID/DD facility in 2005.

#### **Resident Characteristics**

The number of children and youth in large state ID/DD facilities continues to decrease substantially more rapidly than the state ID/DD facility populations as a whole. On June 30, 2004 an estimated 1,771 state ID/DD facility residents (4.3% of the total) were 21 years or younger. This compares with 1,983 (4.5%) in June 2002, 2,130 (4.5%) in June 2000, 6,944 (8.7%) in June 1991, 54,120 (35.8%) in June 1977 and 91,590 (48.9%) in December 1965. Children who were 14 years or younger made up only 0.6% of state ID/DD populations in 2004 as compared with 2.3% in 1991. At least 26 states had no large state facility residents who were less than 15 years old.

Large state ID/DD facility populations are overwhelmingly made up of non-elderly adults and increasingly of middle-aged adults. On June 30, 2002 85.9% of large state ID/DD facility residents were between 22 and 62 years old. This compares with 60.5% in 1977, 73.1% in 1982, 84.3% in 1991, 87.1% in 2000 and 86.3% in 2002. Three-fifths (59.9%) of state ID/DD facility residents in 2004 were in the 40-62 year age range. This compares with 19.2% in 1977, 27.3% in 1987, 42.7% in 1996, 52.7% in 2000 and 55.4% in 2002. The number of large ID/DD facility residents of 63 years and older has decreased by about 1,500 since 1977, even as the proportion of "aged" residents has increased from 3.7% to 9.8% of all residents. On June 30, 1977 there were 5,590 persons 63 years or older in large state ID/DD facilities; on June 30, 2004 there were an estimated 4,082. However, as populations of large state ID/DD facilities have been reduced by more than 72% over the same period, the proportion of persons 63 years and older has increased substantially (3.7% in 1977, 6.0% in 1987, 8.8% in 1998, 9.2% in 2002 and 9.8% in 2004).

More than three-fifths (61.6%) of large ID/DD facility residents have profound cognitive impairments, but the proportion has decreased slightly in recent years. On June 30, 2004, 61.6% of all residents of large state ID/DD facilities were reported to have profound intellectual disablities. This compares with 45.6% in 1977, 63.0% in 1987, 64.6% in 1998, 62.0% in 2000 and 62.3 in 2002. Persons with mild or moderate intellectual disabilities made up 20.7% of state facility residents on June 30, 2004. This compares with 26.8% of state institution residents in 1977, 17.0% in 1987, 17.1% in 1998, 20.0% in 2000 and 20.3% in 2002. On June 30, 2004 nearly half of all state ID/DD facility residents (45.4%) were persons with profound intellectual disabilities 40 years old and older.

The proportion of large state ID/DD facility residents with significant functional impairments has remained generally stable in recent years. On June 30, 2004, 36.8% of state facility residents were reported to be unable to walk without assistance. This compares with 23.3% in 1977, 29.5% in 1987, 35.7% in 1996 and 37.0% in 2002. In 2004, 53.6% of state facility residents were reported to be unable to toilet themselves independently. This compares with 34.1% in 1977, 46.6% in 1987, 57.0% in 1996 and 56.1% in 2002.

Almost half (47.9%) of large state facility residents have 2 or more sensory, neurological or behavioral conditions in addition to intellectual disabilities. On June 30, 2004 12.4% of large state ID/ DD facility residents were reported to be functionally blind and 6.4% were reported to be functionally deaf. Seizure disorders were reported for 42.7% of residents and 18.1% were reported to have cerebral palsy. More than half (52.3%) of all residents were reported to have some form of behavior disorder and 62.2% were reported to have a psychiatric condition. About 47.9% of all residents were reported to have 2 or more of these conditions. These proportions are considerably great than in 1977, when 6.0% of state institution residents were blind, 3.6% were deaf, 32.5% had epilepsy, 19.3% had cerebral palsy and 25.4% were reported to have a behavior disorder, but have not changed appreciably since 1987. in 2004, 50.0% of large state facility residents were reported to be taking prescribed medications for mood, anxiety or behavioral problems.

**Males remained a substantial majority among large state facilities' residents.** Males made up 63.1% of state facility populations in 2004. Males have made up a majority of state facility populations since the first national survey reporting gender statistics in 1904 when 53.1% of state institution residents were male. That proportion has very gradually increased over the years to 57.0% in 1977, 57.7% in 1987, 60.0% in 1996 and 62.8% in 2002.

#### All State and Non-State Residential Services

## Number and Size of Residential Settings

The number of residential settings for persons with ID/DD is growing very rapidly. On June 30, 2004 there were an estimated 148,520 residential settings in which persons with ID/DD received residential services from state operated or state licensed residential service providers (excluding psychiatric facilities, nursing homes and people receiving services while living with family members). Since 1977 the number of settings in which people receive residential services has grown more than thirteen-fold. In comparison, on June 30, 1977 there were 11,008 state licensed or state operated residential service settings; on June 30, 1987 there were 33,477; on June 30, 1995 there were 84,532; and on June 30, 1998 there were 104,765. Of all residential service settings on June 30, 2004, 2,553 were operated or served by state agencies, with the remaining 145,967 residential settings served by nonstate agencies.

Most residences licensed or operated by states for persons with ID/DD were small and almost all people living in small residences were served by nonstate agencies. Of the 148,520 total residential settings on June 30, 2004, an estimated 147,460 (99.2%) had 15 or fewer residents and 140,584 (95.3%) had 6 or fewer residents. The estimated 145,136 nonstate settings with 15 or fewer residents made up 98.4% of all settings with 15 or fewer residents. The 139,963 nonstate settings with 6 or fewer residents made up virtually all (98.9%) of the settings with 6 or fewer residents.

Most large residences were also operated by nonstate agencies. Nonstate agencies operated 831 (78.4%) of the total 1,016 facilities with 16 or more residents. This compares to 80.8% in 1977, 82.7% in 1987 and 85.6% in 1999.

#### Number of Residents

Between 1977 and 2004, there was a steady increase in the total number of persons with ID/DD receiving residential services. Between 1977 and 2004 the total number of residential service recipients grew 69.6%, from 247,780 to a reported 420,202. Total population increases (both nonstate and state settings) were limited to places with 15 or fewer residents, the populations of which increased by an estimated 310,630 between 1977 and 2004. Total populations of facilities with 16 or more residents decreased by 138,208 persons between 1977 and 2004. Between 2003 and 2004 residents of settings with 15 or fewer residents increased by an estimated 21,247 persons, while residents of facilities with 16 or more residents decreased by 3,326.

The national average rate of placement in residential settings for persons with ID/DD in 2004 was 143.1 persons per 100,000 of the general population. Twenty-four states reported residential placement rates (persons served per 100,000 residents of the state) at or above the national average of 143.1. The highest rate (305.8 per 100,000 state residents) was in North Dakota. The lowest placement rate (56.7 per 100,000) was reported by Georgia. Nine states reported placement rates 150% or more of the national average and four states reported placement rates 50% or less of the national average. The national average placement rate of 143.1 in 2004 was higher than the 2003 rate of 142.9 and the 1977 rate of 118.8.

In 2004 about 83.5% of the persons with ID/DD receiving residential services lived in places with 15 or fewer residents, 70.2% lived in places with 6 or fewer residents, and 46.2% lived in places with 3 or fewer residents. On June 30, 2004, residences of 15 or fewer persons housed an estimated 351,054 residents (83.5% of all residents). Settings with 6 or fewer residents housed 294,996 residents (70.2% of all residents) and settings with 3 or fewer residents 193,931 (46.2% of all residents). Of the 329,807 persons living in places with 15 or fewer residents, 338,704 (96.5%) lived in settings operated by nonstate agencies. The 289,456 persons living in nonstate settings with 6 or fewer residents made up almost all (98.1%) of the 294,996 people living in places with 6 or fewer residents.

A substantial majority of persons with ID/DD who received residential services from nonstate agencies lived in smaller settings, while a substantial majority of persons who lived in state residences lived in large facilities. On June 30, 2004 nine-tenths (92.5%) of the 366,199 persons receiving residential services from nonstate agencies lived in settings of 15 or fewer residents, and nearly fourfifths (79.0%) lived in settings with 6 or fewer residents. More than three-fourths (77.1%) of the 69.148 persons living in state operated settings were in facilities with 16 or more residents. Of the 69,148 residents of residential settings with 16 or more residents, 41,653 (60.2%) lived in state facilities. In 1977, 74.6% of the 207.356 residents of facilities with 16 or more residents lived in state facilities.

#### Interstate Variability

Only one state reported a majority of persons with ID/DD receiving residential services lived in facilities of 16 or more residents. On June 30, 2004 over two-thirds (70.2%) of the residents of all settings in Mississippi lived in facilities with 16 or more residents. Nationally, 16.5% of all residential service recipients lived in settings of 16 or more residents.

In 46 states a majority of persons with ID/DD received residential services in settings with 6 or fewer residents. On June 30, 2004 more than half of the residents of settings for persons with ID/DD in all but 5 states lived in settings with 6 or fewer residents. In most states one-half or more of the residents lived in settings of 3 or fewer.

## State and Nonstate Residential Settings by Type

Most people receiving residential services are residents of "congregate care settings." Congregate care is provided in settings owned, rented or managed by the residential services provider, or the provider's agents in which paid staff come to the settings to provide care, supervision, instruction and other support. They include, but are not limited to ICFs-MR. An estimated 269,351 persons with ID/DD lived in congregate care settings on June 30, 2004 (64.1% of all residential service recipients). A majority of these persons (201,421 or 74.8%) lived in settings with 15 or fewer residents and over one-half of those 142,918 (53.1%) lived in settings with 6 or fewer residents.

The number of people living in host family/foster care is slowly increasing. An estimated national total of 39,857 persons with ID/DD lived in host family/foster care settings on June 30, 2004. This represents a 12.9% decrease from one year earlier. Virtually all (99.95%) host family/foster care residents lived in homes with 6 or fewer residents. Between June 30, 1982 and June 30, 2004 the estimated number of people in host family settings increased from approximately 17,150 to 39,857 (132.4%).

About 25.5% of persons receiving ID/DD residential services live in their "own homes" that they own or lease. An estimated national total of 107,157 persons with ID/DD receiving residential services and supports lived in homes that they owned or leased for themselves. The number of persons living in homes of their own increased 18.3% between June 30, 2003 and June 30, 2004. Between 1993 and 2004 the estimated number of people living in homes of their own nationally increased by 216.2% as the movement toward consumer controlled housing and supported living continued.

The number of people with ID/DD receiving residential services living in settings of 3 or fewer persons continues to increase. An estimated 193,931 (46.2%) of persons receiving residential services in 2004 were living in homes of 3 or fewer residents. This was more than 12 times as many as in 1982. Among 42 states for which these data were available, persons with ID/DD living in settings of 3 or fewer persons ranged from 16.3% to 94.1% of all persons with ID/DD receiving residential services.

#### Patterns of Change in Residential Service Systems: 1977-2004

The number of residential settings in which people received services increased much faster than the total number of service recipients. Between 1977 and 2004, the total number of residential settings in which people with ID/DD received residential services grew from 11,008 to an estimated 148,520 (1,249.2%), while total service recipients increased by 69.6%, from about 247,780 to an estimated 420,202 individuals.

The nation moved from large facility-centered to community residential services. In 1977, an estimated 83.7% of the persons with ID/DD receiving residential services lived in residences of 16 or more people. By 2004, an estimated 83.5% lived in community settings of 15 or fewer people, and 70.2% lived in residential settings with 6 or fewer people.

The role of the state as a residential service provider dramatically declined. In 1977, 62.9% of all residential service recipients lived in state residential settings. By 2004, 12.9% of all residential service recipients lived in state residential settings.

States reported a large number of service recipients living in their family homes. In 2004, an estimated 503,641 persons received services in their family homes. This equals 54.5% of all persons receiving ID/DD residential services in or out of their family homes. States reported that recipients of ID/ DD family-based services in states ranged from 5.3% to 84.3% of all service recipients.

On June 30, 2004, there were an estimated 88,841 persons waiting for residential services. Based on reports of 37 states it was estimated that 88,841 persons not presently receiving ID/DD services outside their family homes are waiting for such services. It would require an estimated 21.1% growth in available residential service capacity to provide residential services to all of the persons currently waiting. The required expansion of individual state residential service systems to meet present needs ranged in the reporting states from 0.0% to 151.1%.

#### Medicaid Funded Services

#### Intermediate Care Facilities for Persons with Mental Retardation (ICFs-MR)

The total number of ICFs-MR between 2003 to 2004 decreased by 110 facilities. On June 30, 2004 there were 6,535 ICFs-MR nationwide, as compared to 6,645 in 2003. Average ICF-MR size in 2004 was 16.0 residents; this compares with 186 residents in 1977; 74.5 residents in 1982; 37 residents in 1987; 22.5 residents in 1992; 17.5 residents in 1997 and 16.1 residents in 2003.

In 2004, the population of ICFs-MR continued to decrease. Between 1982 and 1994 the ICF-MR program was notable for its stability in the number of persons served. On June 30, 1994 there were 142,118 persons living in all ICFs-MR. This compares with 140,684 on June 30, 1982. By June 1999 the total ICF-MR population had decreased to 117,917. The June 2004 population of ICFs-MR was 104,526, a decrease of 2,539 (2.4%) from the previous year.

Populations of large ICFs-MR have continued to decrease steadily. On June 30, 2004 there were 63,834 persons living in ICFs-MR of 16 or more residents (61.1% of all ICF-MR residents). This represented a 45.5% decrease from the 117,147 persons in large ICFs-MR in 1988 and a 51.1% decrease from 130,767 residents of large ICFs-MR in 1982. The 2004 population of large ICFs-MR included 41,068 residents of state ICFs-MR and 22,766 residents in nonstate ICFs-MR. Between June 30, 1988 and June 30, 2004, large state ICF-MR populations decreased 51.7% (from 85,064), while large nonstate ICF-MR populations decreased by 29.0% (from 32,083).

Almost all residents of large state and nonstate residential facilities live in ICFs-MR. In 2004, 92.3% of persons living in all large state and nonstate facilities lived in ICF-MR units, and 98.6% of people living in state facilities of 16 or more residents lived in ICF-MR units.

In 2004, only 4 of 10 ICF-MR residents were living in state facilities. On June 30, 2004, 40.2% of all ICF-MR residents were living in state facilities. This compares with 44.9% in June 1996; 63.2% in June 1987; and 87.5% on June 30, 1977. The decreased concentration of ICF-MR residents in state facilities is associated with the general depopulation of large state ID/DD facilities and the increase in the number of community ICFs-MR. On June 30, 2004 there were 41,068 persons in ICF-MR units of large state ID/DD facilities (39.3% of all ICF-MR residents). This compares with 53,372 persons in June 1997 (42.1% of all ICF-MR residents); 88,424 persons in June 1987 (61.2% of all ICF-MR residents), and 107,081 persons in June 1982 (76.3% of all ICF-MR residents).

The number of residents of community ICFs-MR decreased slightly in 2004. On June 30, 2004 there were 40,692 persons with ID/DD living in community ICFs-MR with 15 or fewer residents. This represents a slight decrease of 0.2% from June 30, 2003. Community ICFs-MR continued to house many more than the 25,328 persons on June 30, 1987, and the 9,985 persons on June 30, 1982. On June 30, 2004, 47.3% of residents of community ICFs-MR lived in facilities with 6 or fewer residents. Between June 1982 and June 2004 the total number of persons with ID/ DD living in ICFs-MR of six or fewer residents increased from 2,572 to 19,251. Between June 2003 and June 2004 the number of people living in ICFs-MR of 6 or fewer residents increased by 189 residents (1.0%).

A relatively small proportion of persons with ID/DD in community settings live in ICF-MR certified residences. Nationally, on June 30, 2004 only 11.6% of the persons in settings with 15 or fewer residents lived in ICFs-MR. Persons living in settings with 7 to 15 residents were far more likely to live in ICFs-MR than persons living in settings of 6 or fewer residents; 21,441 (38.2%) of the 56,058 persons living in settings with 7 to 15 residents lived in ICFs-MR, as compared with 19,251 (6.5%) of the 294,996 living in settings with 6 or fewer residents.

In FY 2004 total ICF-MR expenditures were more than in FY 2003. In Fiscal Year 2004 total federal and state expenditures for ICF-MR services were 11.9 billion dollars. This was an increase from 11.5 billion dollars in FY 2003. Comparable expenditures were 10.0 billion in 1997, \$8.8 billion in 1992, \$5.6 billion in 1987, \$3.6 billion in 1982 and \$1.1 billion in 1977.

Per resident ICF-MR expenditures in 2004 continued to increase. In 2004 the average expenditure for end of year ICF-MR residents was \$114,132. This compares with the 2003 average of \$107,161. The average 2004 expenditure for average daily residents in ICFs-MR was \$112,762, or 166.2% of the average per resident expenditure of 15 years earlier. States varied substantially in expenditures per endof-year ICF-MR resident, from more than \$160,000 per year in thirteen states to less than \$80,000 per year in ten states. Total ICF-MR expenditures per person in the general population averaged \$40.62 per year nationally. Five states spent over twice the national average.

#### Medicaid Home and Community Based Services (HCBS)

**Growth in HCBS recipients continues.** On June 30, 2004 there were 424,855 persons with ID/DD receiving HCBS, an increase of 5.6% over the 402,438 recipients on June 30, 2003. Between June 30, 1990 and 2004, the number of HCBS recipients grew by 385,017 persons (966.5%) from 39,838 HCBS recipients and the number of states providing HCBS increased from 42 to 51. Forty-eight states increased their number of HCBS recipients by 1,000 or more between 1990 and 2004.

The number of people receiving HCBS is more than four times the number living in ICFs-MR. On June 30, 2004 the number of HCBS recipients (424,855) was 406.5% of the number of persons living in ICFs-MR (104,526). Only ten years earlier on June 30, 1994 the number of ICF-MR residents (142,118) was greater than the number of HCBS recipients (122,075).

The number of people receiving residential services outside the family home with HCBS financing is more than twice the number living in ICFs-MR. Of the 51 states with HCBS programs, 45 were able to report, in whole or part, the residential arrangements of their HCBS recipients on June 30, 2004. Based on these reports it is estimated that in June 2004 HCBS financed residential arrangements for 240,469 persons with ID/DD outside the homes of parents or relatives. This estimated number of individuals receiving HCBS-financed residential services was well more than twice the number of ICF-MR residents.

Expenditures for Medicaid HCBS recipients continue to grow and show substantial interstate variability. In Fiscal Year 2004 expenditures for Medicaid HCBS recipients were 15.5 billion dollars for 424,855 recipients, a per end of year recipient average of \$36,497 per year. Expenditures adjusted for average daily HCBS recipients were \$37,486 per person. This represents a 76.4% total or 5.5% average annual increase in per average daily recipient average expenditures between Fiscal Year 1990 (\$21,246) and Fiscal Year 2004. The states with the highest per recipient expenditures in Fiscal Year 2004 were Delaware (\$74,048), Maine (\$72,299) and Rhode Island (\$76,667). The states with the lowest per recipient expenditures in Fiscal Year 2004 were Delaware (\$14,796) and Mississippi (\$15,338).

#### ICF-MR and HCBS Combined

Growth in the total number of ICF-MR and HCBS recipients has continued at a steady rate. The combined total of 529,381 ICF-MR and HCBS recipients on June 30, 2004 represented a 12.8% average annual increase between June 30, 1992 and June 30, 2004. Between 1992 and 2004 the combined total of ICF-MR and HCBS recipients grew by an average 26,722 persons per year. Combined totals of ICF-MR and HCBS recipients increased at an annual average of about 4,995 persons between 1982 and 1987 and by about 8,000 persons per year between 1987 and 1992. On June 30, 2004, HCBS recipients made up 80.3% of the combined total of 529,381 ICF-MR and HCBS recipients, as compared with just 16.4% on June 30, 1987.

On June 30, 2004 community ICF-MR residents and HCBS recipients made up 88% of all community and institutional residents funded by the ICF-MR and HCBS programs. On June 30, 2004 residents of community ICFs-MR (15 or fewer residents) and HCBS recipients made up 87.9% of all ICF-MR and HCBS recipients. That compares with 85.9% in June 2002, 81.9% in June 2000, 78.3% in June 1998; 57.8% in June 1993 and 33.0% in June 1988. In all states most of the combined ICF-MR and HCBS recipients were receiving community services.

There remains remarkable variation among states in ICF-MR and HCBS utilization rates. On June 30, 2004 there was a national ICF-MR utilization rate of 35.6 ICF-MR residents per 100,000 persons in the United States. The highest individual state ICF-MR utilization rates were 134.8 in District of Columbia and 120.5 in Louisiana. The highest utilization of large ICFs-MR were in Arkansas (46.6), Illinois (49.6), Iowa (53.8), Louisiana (54.3), Mississippi (70.2), and Ohio (42.5). State HCBS utilization rates varied from more than twice the national average of 144.7 per 100,000 residents in three states to less than half of the national average in five states. On June 30, 2004 nationally there was an average combined ICF-MR and HCBS utilization rate of 180.3 per 100,000 of the population. Individual state utilization rates for the combined programs varied from the highest rates in Iowa (345.7), Minnesota (336.6), New York (315.4), North Dakota (516.3), South Dakota (335.8), Vermont (315.9) and Wisconsin (329.5) to the Iowest rates in Kentucky (77.8) and Nevada (64.4).

Medicaid expenditures are disproportionately greater for persons in ICFs-MR than HCBS recipients. The annual Medicaid expenditures per average daily recipient of ICF-MR services was \$105,796 as compared to \$37,486 per each HCBS recipient. As a result, nationally in Fiscal Year 2004, HCBS recipients made up 80.3% of the total HCBS and ICF-MR recipient population but used only 56.5% of the total Medicaid HCBS and ICF-MR expenditures. In FY 2004 total HCBS expenditures were greater than total ICF-MR expenditures in 36 states.

**Differences in state benefits from Medicaid spending continues.** Almost any measure of each state's relative benefits from Medicaid funding yields significant interstate differences. Indexing Fiscal Year 2004 federal reimbursements for ICF-MR and HCBS programs in each state by federal income tax paid by residents of each state, 7 states received over twice their relative federal income contributions tax back in benefits per \$1.00 contributed, Iowa (\$2.14), Louisiana (\$2.62), Maine (\$3.64), Mississippi (\$2.16), New Mexico (\$2.99), North Dakota (\$3.16), Vermont (\$2.05), West Virginia (\$3.50) and Wyoming (\$2.46). By the same measure four states received back less than half their relative contributions, California (\$0.48), Colorado (\$0.46), District of Columbia (\$0.44) and Nevada (\$0.35).

#### Nursing Home Residents

The number of persons with ID/DD in Nursing Facilities continues to remain relatively stable nationally but with major variations across states. On June 30, 2004 there were an estimated 32,899 persons with ID/DD in Medicaid Nursing Facilities. This compares with an estimated 35,005 in June 2003 and 38,799 on June 30, 1992. Nationwide, in 2004, 7.3% of all persons with ID/DD receiving residential services and 5.9% of all with ID/DD receiving services through Medicaid ICF-MR, HCBS or Nursing Facility programs were in Medicaid Nursing Facilities. The percentage of residential service recipients in nursing facilities varied from less than 5% in 19 states to more than 20% in 2 states.

# Introduction and Methodology

#### Introduction

The National Residential Information Systems Project (RISP) on Residential Services of the Research and Training Center on Community Living began in 1977. It has operated on a nearly continuous basis since then. This project gathers and reports statistics on persons with intellectual disabilities and related developmental disabilities (ID/DD) receiving residential services, both state and nonstate, Medicaid-funded and non-Medicaid funded programs in the United States, including residential services operated specifically for persons with ID/DD, as well as persons with ID/DD who are living in state psychiatric facilities. This particular report provides such statistics for the year ending June 30, 2004, as well as comparative statistics from earlier years.

Section 1 of this report presents statistics on state residential services for Fiscal Year 2004, with comparative trend data from earlier years. Chapter 1 presents statistics that were compiled and reported by various state agencies. The data collection in Chapter 1 represents a continuation of a statistical program originated by the Office of Mental Retardation Coordination (now the Administration on Developmental Disabilities) in 1968 which gathered statistics on state ID/DD residential facilities with 16 or more residents. It has since been expanded to include statistics on smaller state ID/DD residential settings (those with fewer than 15 residents) and on state psychiatric facilities which house persons with intellectual disabilities and related conditions. The addition of state psychiatric facilities was begun for Fiscal Year 1978, and the smaller state residential settings were added in Fiscal Year 1986. As indicated at various points throughout this report the statistics gathered as part of the National Residential Information Systems Project since Fiscal Year 1977 have also been linked to a longitudinal data base developed by the project including statistics on residents and expenditures of individual large (16 or more residents) state ID/DD residential facilities on June 30, 2004. That data base begins with the first census of state ID/DD residential facilities carried out as part of the U.S. Census of 1880.

Section I, Chapter 1 also presents the Fiscal Year 2004 statistics as part of the longitudinal trends in state residential facility populations, resident movement, and expenditures for state residential facility care since 1950. A brief historical review of these

and other preceding surveys since 1950 can be found in Lakin, Hill, Street, and Bruininks (1986). For a more detailed review, including surveys and statistics since 1880, see Lakin (1979).

Section I, Chapter 2 presents information on average and end of Fiscal Year 2004 populations of state residential facilities for persons with ID/DD, average per diem expenditures during Fiscal Year 2004 by large state residential facilities and patterns of large state residential facility closure. It provides a listing of all large state residential facilities that have operated since 1960, including those that closed in or before 2004, and those that are scheduled to close in Fiscal Year 2005. These statistics were gathered through the survey of individual state facilities including traditional state ID/DD residential facilities and ID/ DD units contained within state psychiatric or other "mixed use" residential facilities.

Section I, Chapter 3, presents information on the characteristics and movement of residents of large state ID/DD facilities. These statistics were gathered in a survey of all large state ID/DD facilities and continues a line of biannual surveys conducted since 1977. Longitudinal trend data are provided. Section I, Chapter 4, presents information on staffing patterns, characteristics, and outcomes in large state ID/DD facilities. These statistics, too, come from the survey of all large state ID/DD facilities.

Section II of this report presents combined statistics on the total numbers of persons with intellectual disabilities and related developmental disabilities in both state and nonstate residential settings. Statistics in this section have been compiled and reported by individual state ID/DD agencies. This data set was designed in cooperation with state agencies to permit the most comprehensive possible data collection while maintaining congruence with administrative data sets maintained in each of the states. It should be noted that in certain states a significant amount of state effort is required to compile the requested statistics, sometimes including separate surveys of substate regions. Occasionally the demands of such data collection activities preclude a state's reporting completely for a particular year. In such states statistics from the most recent data collection point have been substituted for Fiscal Year 2004 data. When earlier data are substituted, they are so indicated in the tables presented.

Section II provides longitudinal trend statistics on total (i.e., state and nonstate) ID/DD residential service systems on the individual state and national levels. Section II, Chapter 5 provides data on total state residential services systems (i.e., services provided by both state and nonstate agencies). These statistics are reported by state/nonstate operation and by size of residential settings on June 30, 2004. State services include those described in Chapter 1 with the exception of the psychiatric residential facilities, which are excluded in Section II's focus on the individual state and national ID/DD residential services systems. Although nonstate settings are almost entirely privately operated, in a few states local government agencies also operate residential programs. These local government programs are included with private programs in a nonstate category because typically their relationship with the state with respect to licensing, monitoring and funding is more like that of a private agency than that of a state program. In addition to state/nonstate operation, four residential setting size distinctions are provided: 1 to 3 residents, 4 to 6 residents, 7 to 15 residents and 16 or more residents. These size categories were established because they were most congruent with the data that the individual states were able to report.

Chapter 6, presents statistics reported by the various states on residents living in different types of residential settings of state and nonstate operation. Four separate categories of residential settings are identified. These were developed after consultation with state respondents during a 1986 feasibility study of states' abilities to report residents by setting type. Without question this area presents states with the greatest reporting challenge. States have in total literally hundreds of different names for residential programs and many of these programs have aspects which make them subtly different from similarly named programs in other states. Even in using just the four broad residential setting categories identified below, a few state data systems do not permit the breakdowns requested. Therefore in some states some residential settings and their residents must be subsumed in the statistics of another setting type.

Chapter 7 presents Fiscal Year 2004 statistics along with longitudinal statistics from earlier years to show the changing patterns of residential services for persons with ID/DD from 1977 to 2004. This presentation of statistics focuses on overall residential service utilization as well as the utilization of residential settings of different state/nonstate operation, size and type.

Section III focuses on the utilization of the Medicaid program to sponsor long-term care services for persons with intellectual disabilities and related developmental disabilities. Chapter 8 describes the evolution of Medicaid involvement in services for persons with intellectual disabilities and related conditions and the specific programs funding residential services for persons with ID/DD. Chapter 9 provides statistics on June 30, 2004 utilization of these Medicaid programs. It also presents Fiscal Year 2004 statistics within the longitudinal context of changing Medicaid utilization. This presentation also includes Medicaid residential services program utilization within the entire system of residential services for persons with intellectual disabilities and related conditions.

Section IV provides state-by-state trends in residential services. Chapter 10 in this section provides individual state summaries from 1977 to 2004 of changes in residential services by facility size, service recipients per 100,000 of state population and other descriptors for use in monitoring trends and comparing states.

#### Methodology

The contents of this report primarily derive from two data collection activities. The first is a four-part survey of designated state agencies and key respondents to gather aggregated state statistics. The second is a survey of administrators of all large (16 or more residents) state ID/DD facilities.

#### State Survey Data Collection

A four-part survey questionnaire for state agency statistics for Fiscal Year 2004, was mailed with a cover letter to each state's intellectual disabilities/ developmental disabilities program director and the state's designated "key data informant" in July 2004. Part 1 of the questionnaire was on state residential services including state ICFs-MR. Part 2 gathered statistics on nonstate residential settings and residents with intellectual disabilities and related developmental disabilities including nonstate ICFs-MR. Part 3 contained questions on Medicaid Home and Community Based Services. Part 4 requested the number of persons with ID/DD on waiting lists for residential services. Telephone follow-up began two weeks after the questionnaires were mailed to confirm the individual(s) in each state agency who had accepted responsibility for compiling the statistics for each part of the survey. Direct contacts were then made with each key data manager to answer questions about the data requested.

Data on nursing facility residents was reported based on invidual state responses from a survey sent separately from the original survey. All but two states were able to provide data as of June 30, 2004. FY 2003 data was reported for these states. West Virginia was unable to provide data.

Additional follow-up telephone calls to promote initial response and to clarify and edit the statistics on returned questionnaires continued and summaries of the data from each state were verified with each state. Reporting and special notes on state data were completed by the end of May 2005. Compiling statistics from states on the four-part survey took an average of four telephone conversations involving up to four different people in each state. In several states contacts were made with two or more of the intellectual disabilities/developmental disabilities, mental health and Medicaid agencies to gather the required statistics.

Limitations are encountered when gathering statistics at the state level. Most notable among these are the variations that sometimes exist in the types of statistics maintained by the various states and the specific operational definitions governing certain data elements. For example, in a few states data on first admissions, discharges, and deaths were not available according to the specific survey definitions. In a few other states the state statistical systems were not wholly compatible with the uniform data collection of this project. General problems in the collection of that data are presented in the discussion accompanying each table in the body of the report and/or in notes at the foot of tables.

## Individual State Residential Facility Survey

Data in Chapters 2, 3 and 4 of this report presents results from a survey of each large (16 or more) state ID/DD residential facility or unit operating on June 30, 2004.

The survey used was a comprehensive study of demographic, diagnostic, functional and behavioral characteristics of large state facility populations, of persons moving in and out of the facilities, and of administrative aspects (e.g. expenditures, salaries, staffing) of the facilities.

As in the past, this survey was conducted in cooperation with the Association of Public Developmental Disabilities Administrators (formerly the National Association of Superintendents of Public Residential Facilities for the Mentally Retarded).

#### Historical Statistics on State Residential Facilities

The longitudinal data presented here are derived from the following sources: 1) state ID/DD and psychiatric facilities for the years 1950 to 1968 come from the National Institute of Mental Health's surveys of "Patients in Institutions;" 2) state ID/DD facilities for FYs 1969 and 1970 come from surveys conducted by the Office on Mental Retardation Coordination, now the Administration on Developmental Disabilities; 3) large state ID/DD facilities for 1971 through 1977 come from the surveys of the National Association of Superintendents of Public Residential Facilities for Persons with Mental Retardation, now the Association of Public Developmental Disabilities Administrators: 4) psychiatric facilities for 1969 to 1977 come from the National Institute of Mental Health's surveys of "Patients in State and County Mental Hospitals;" and, 5) large state ID/DD and psychiatric facilities for the years 1978 through 2004 come from the ongoing data collection of this project.

# Section 1

Status and Changes in State Residential Services

## Chapter 1

#### Current Populations and Longitudinal Trends of State Residential Settings (1950-2004)

Kathryn Coucouvanis, Robert W. Prouty, Robert H. Bruininks, and K. Charlie Lakin

This chapter presents statistics by state and size of state residential settings serving persons with intellectual disabilities and related developmental disabilities (ID/DD). Data on resident populations, resident movement, and costs are presented for Fiscal Year (FY) 2004 and national longitudinal trends are provided for FYs 1950 through 2004. FY 2004's size of residence statistics are provided in detail for state residential settings with 3 or fewer residents, 4 to 6 residents, 7 to 15 residents and 16 or more residents and for persons with ID/DD residing in large state psychiatric facilities. Longitudinal population statistics are provided for large (16 or more residents) state ID/DD facilities and psychiatric facilities.

FY 2004 data for all ID/DD community settings and large state facilities, and psychiatric facilities come from the annual survey of all states conducted by this project. The longitudinal data presented here are derived from the list of "References and Data Sources," which includes specific citations for the surveys and statistical summaries used to complete this longitudinal data set. A description of these sources is in the "Introduction and Methodology." A detailed description of these surveys can be found in Lakin (1979).

#### Number of State Residential Settings

Table 1.1 presents statistics by state on the number of state residential settings serving persons with ID/ DD in the United States on June 30, 2004. The statistics are broken down for state ID/DD settings with 1-3 residents, 4-6 residents, 7-15 residents, and 16 or more residents, for state psychiatric facilities, and total large state facilities and all state settings.

On June 30, 2004, states reported a total of 2,587 state residential settings serving persons with ID/DD, a decline of 157 from the previous year. Of these, 2,553 were settings primarily for persons with ID/DD. Of the 2,553 state ID/DD settings, 2,324 had 15 or fewer residents; 229 had 16 or more residents. All

states except Alaska, District of Columbia, Hawaii, Maine, New Hampshire, New Mexico, Vermont, and West Virginia operated at least one large (16 or more residents) state ID/DD facility on June 30, 2004. Ten states reported at least one psychiatric facility housing persons with a primary diagnosis of ID/DD in units other than special ID/DD units (the latter being counted among the ID/DD facilities). States (excluding Indiana and New Jersey) reported a total of 34 psychiatric facilities with residents with ID/DD as compared with 32 on June 30, 2003.

On June 30, 2004, 20 states were serving persons with ID/DD in state "community" settings (with 15 or fewer total residents). There were 2,324 community residential settings staffed by state employees on June 30, 2004, including 703 (30.2%) housing 7-15 residents, 885 (38.1%) housing 4-6 residents and 736 (31.7%) housing 3 or fewer residents.

The greatest number of state community residential settings was in New York (1,005 settings). New York operated 43.2% of all such settings in the United States on June 30, 2004. More than one-half (52.7%) of New York's state community residential facilities had between 7 and 15 residents. In June 2004, of the 1,319 state community ID/DD residential settings outside of New York more than four-fifths (86.9%) had 6 or fewer residents.

#### Residents with ID/DD of State Settings

Table 1.2 presents the number of persons with ID/ DD living in state ID/DD residential settings and psychiatric facilities on June 30, 2004. On June 30, 2004 there were 54,404 persons with ID/DD living in state residential settings. This represented a decrease of 1,756 (-3.1%) from the 56,160 residents on June 30, 2003. Of this population, 54,003 (99.3%) persons were residents of settings specifically designated for persons with ID/DD and 401 (0.7%) persons were residents of psychiatric facilities.

<sup>\*</sup> a state setting is a residence in which the persons providing direct support to the residents are state employees

## Table 1.2 Persons with ID/DD Living in State Residential Settings on June 30, 2004 by State

e = estimate

Of the 54,003 persons living in state ID/DD settings on June 30, 2004, 5,540 (10.3%) were in settings of 6 or fewer residents, with 3,686 (66.5%) of them concentrated in three states (Connecticut, Massachusetts and New York). Of the 6,810 (12.6%) persons in settings with 7 to 15 residents, 5,318 (78.1%) were in New York. There were 41,653 persons in state facilities of 16 or more residents in June 30, 2004, a decrease from 42,835 a year earlier. More than two-fifths (40.3%) of the total of large state facility residents lived in five states (California, Illinois, New Jersey, New York and Texas), each with more than 2,200 residents of such facilities.

The decrease in the number of residents of large state ID/DD facilities continued a trend first evident in FY 1968. The 2.8% rate of decrease between June 30, 2003 and June 30, 2004 compares with decreases of 2.8% in FY2003; 4.1% in FY2002; 3.0% in FY2001; 3.6% in FY 2000; 4.6% in FY 1999; 6.1% in FY 1998; 6.0% in FY 1997; 6.0% in FY 1996; 5.6% in FY 1995; 5.8% in FY 1994; and 6.4% in FY 1993. A factor in the slowing rate of deinstitutionalization is the number of states (8) that have no one left in large state ID/DD facilities and cannot, therefore, continue to contribute to further population reductions.

## Change in Average Daily Population: 1980-2004

Table 1.3 presents summaries of the average daily population of large state ID/DD facilities by state for FYs 1980, 1985, 1990, 1995, 2000, 2003 and 2004 and the percentage of change in average daily population between 1980, 1985, 1990, 1995, 2000, and 2004, respectively. The average daily population is the sum of the number of people living in a facility on each of the days of the year divided by the number of days of the year. In FY 2004, the average daily population of large state ID/DD residential facilities was 42,120 people, a reduction of 1,169 (2.7%) from the 43,289 average daily population in FY 2003.

Average daily populations of large state ID/DD facilities decreased by 88,968 (-68.1%) between 1980 and 2004. More than three-fourths (78.4%) of the states reduced their populations in large state ID/DD facilities by more than 50% during the period. In 17 states, Alabama, Alaska, Colorado, District of Columbia, Hawaii, Maine, Maryland, Michigan, Minnesota, New Hampshire, New Mexico, New York, North Dakota, Oregon, Rhode Island, Vermont, and West Virginia decreases were 80% or more.

In the first five years of this period (1980-1985) average daily population of large state ID/DD facilities decreased by 21,474 (16.4%) or an annual average decrease of 4,295 residents (3.3% per year). In the next five years (1985-1990) large state ID/DD facilities' average daily populations decreased by 25,225 (23.0%) or an annual average decrease of 5.045 residents (4.6%). Between 1990 and 1995 average daily populations of large state ID/DD facilities decreased by 20,684 (24.5%) or an average of 4,137 (4.9%) residents per year. Between 1995 and 2000 the average daily populations decreased by 15.833 (24.9%) or an annual average decrease of 3,167 (5.0%). In the last four years between 2000 and 2004, the average daily populations decreased only 12.0% and the annual average decrease of 1,438 (3.0%) was less than half the annual decrease of five years before.

All states reduced their average daily population of large ID/DD facilities between 1990 and 2004. In 32 states the average daily population decreased by more than 50% over the 14 year period. Fourteen states reduced their average daily populations by more than 75% between 1990 and 2004 (Alabama, Alaska, Colorado, District of Columbia, Hawaii, Maine, Michigan, Minnesota, New Hampshire, New Mexico, Oregon, Rhode Island, Vermont, and West Virginia).

#### Average Daily Residents with ID/DD in Large State ID/DD and Psychiatric Facilities

Table 1.4 reports average daily population of residents with ID/DD in large state ID/DD facilities and psychiatric facilities in selected years, 1950-2004. The gradual depopulation of large state residential facilities for persons with ID/DD has been occurring on a national basis since 1967. Nationally, there has been a decreasing total residential population of large state residential facilities for all types of mental disability (i.e., psychiatric and ID/DD) since 1956. Although the total population in state psychiatric facilities peaked in 1955, the number of persons with a primary diagnosis of intellectual disability in state psychiatric facilities continued to increase until 1961. In 1961, there were nearly 42,000 persons with a primary diagnosis of intellectual disability in such facilities. The combined total of persons with ID/DD in both large state ID/DD and psychiatric facilities in 1961 was 209,114. By 1967, the number of persons with ID/ DD in state psychiatric facilities had decreased to 33,850, but the total number of persons with ID/DD in all large state facilities had increased to 228,500

(194,650 of whom were in large state ID/DD facilities.) This was the highest total ever.

e = estimate

Since 1967, the number of persons with ID/DD in all large state residential facilities has decreased very significantly. During this period the number of persons with ID/DD in state psychiatric facilities decreased much more rapidly than did the number of persons in large state ID/DD facilities. The different rates of depopulation reflect a number of factors. For one, the depopulation of state psychiatric facilities occurred earlier and more rapidly than the depopulation of state ID/DD facilities. Between 1960 and 1980 the total populations of state psychiatric facilities decreased by about 75% (Zappolo, Lakin & Hill, 1990). This rapid depopulation and frequent closing of facilities has contributed to major reductions in residents with all types of disability, including ID/DD. Relatedly over the years, many large state residential facilities

became primarily dedicated to populations with ID/ DD or developed independent ID/DD units on the grounds of what were historically public psychiatric facilities.

These changes were prompted by Medicaid legislation in the late 1960s and early 1970s that allowed states to obtain federal cost-sharing of institutional services to persons with ID/DD in Intermediate Care Facilities-Mental Retardation (ICFs-MR) and in nursing homes, but excluded residents of facilities for "mental diseases" from participation in Medicaid, except for children and elderly residents. Distinct units for persons with ID/DD within psychiatric facilities could become ICF-MR certified. Many were and those units within the definitions employed in this study are now classified among the large state ID/DD residential facilities.

The average daily number of persons with ID/DD in large state ID/DD facilities in FY 2004 (42,120) was only 21.6% of the average in large state ID/DD facilities in 1967, and the average of persons with ID/DD in all large state residential facilities (42,514) was only 18.6% of the 1967 average. Figure 1.1 shows the relative contribution of state ID/DD and state psychiatric facilities to the total average daily population of residents with ID/DD in all large state residential facilities.

#### Residents with ID/DD of Large State ID/ DD and Psychiatric Facilities per 100,000 of the General Population

Indexing the population of large state facilities by the general population of states or the U.S. at a given time permits a better picture of the relative use of these settings for persons with ID/DD. This statistic is referred to here as the "placement rate." Placement rate is reported for the end-of-year population in Table 1.5 and is shown as a trend based on the annual average resident populations in Table 1.6 and Figure 1.2.

Residents with ID/DD of state residential settings per 100,000 of the general population on June 30, **2004.** Table 1.5 indexes the population of persons with ID/DD living in state residential settings June 30, 2004 by 100,000 of each state's general population. The national placement rate for all state residential settings was 18.5 residents per 100,000 members of the general population. This represented a reduction from 27.9 on June 30, 1995; 26.4 on June 30, 1996; 23.6 on June 30, 1998; 20.8 on June 30, 2001; 19.7

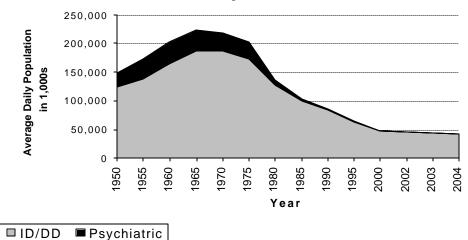

Figure 1.1 U.S. Trends in Average Daily Population with ID/DD in Large State ID/DD and Psychiatric Facilities, 1950-2004.

on June 30, 2002 and 20.0 on June 30, 2003. The decrease in the national placement rate for all state residential services was the result of a decrease in the placement rates in state ID/DD settings of all sizes.

Four states had more than twice the national average placement rate for large state ID/DD facilities on June 30, 2004 (Arkansas, Louisiana, Mississippi, and New Jersey). Among the 43 states still operating large state ID/DD facilities, eight states had less than one-third the average placement rate for such facilities on June 30, 2004 (Alabama, Arizona, Colorado, Michigan, Minnesota, Nevada, Oregon and Rhode Island). Connecticut, Mississippi, New York and Rhode Island had the highest placement rates in state community settings of 15 or fewer residents (each six or more times the national average). Connecticut and Rhode Island had the highest placement rates in small state settings of 6 or fewer residents (21.0 and 26.1 per 100,000 of the state population, respectively).

U.S. Trends in Average Residents with ID/ DD in Large State Facilities per 100,000 of the General Population.

Table 1.6 and Figure 1.2 present trends in the average annual placement rates per 100,000 of the total U.S. population for large state ID/DD and psychiatric facilities. Since 1967, there has been a substantial decrease in the number of people with ID/DD in large state residential facilities, especially when it is adjusted for the growing total U.S. population. The placement rate of persons with ID/DD in all large state facilities (ID/DD and psychiatric) peaked in 1965 at 115.8 per 100,000 of the general population. This compares with 14.9 in FY 2004, only 12.9% of the 1965 rate. The highest placement rate in large state ID/DD

facilities was in 1967. That year's placement rate of 98.6 was more than six times the 2004 rate of 14.3%.

The decrease in the placement rate in large state psychiatric facilities between 1973 and 2004 partly reflects changing definitions. During that period some settings historically serving psychiatric populations, either through official or operational designation, became facilities primarily serving persons with ID/DD. Others developed administratively distinct ID/DD units within traditional psychiatric facilities. The most important factors in the decreasing numbers of persons with ID/DD in psychiatric facilities have been the major changes in philosophy about appropriate placements for people with ID/DD and federal cost-sharing services provided in facilities certified to participate in the Intermediate Care Facility for Persons with Mental Retardation (ICF-MR) program. The statistics in Figure 1.2 show clearly a substantial decrease in the rate of placement of persons with ID/DD in state residential psychiatric facilities.

## Slowing Rates of Large State Facility Depopulation

Despite continuing reductions in large state facility populations, it was notable that the period of Fiscal Years 2001-2004, experienced the smallest reductions in large state facility residents with ID/DD in more than 30 years. This was both in terms of numerical reductions and in percentage rates of decline. Figure 1.3 shows the average annual reductions in average daily populations (ADP) of large state facilities in 3-year periods beginning in Fiscal Year (FY) 1968, the first year in which U.S. state institution populations decreased. The final period shown is actually four years, FY 2001-2004, but is comparable in that

Population           State         (100,000)         1-6         7-15         1-1           AL         45.30         0.0         0.0         0           AK         6.55         0.0         0.0         0           AR         27.53         0.0         0.0         0           CA         358.94         0.0         0.0         0           CO         46.01         1.4         4.8         6           CT         35.04         21.0         8.0         29           DE         8.30         0.0         0.0         0           GA         88.29         0.7         0.0         0           ID         13.93         0.0         0.0         0           IL         127.14         0.0         0.0         0           IA         29.54         1.3         0.0         0           IN         62.38         0.0         0.0         0           IA         45.16         2.1         0.0         2           ME         13.17         0.9         0.8         1           MD         55.58         0.0         0.0         0	Settings	— <u> </u>	Total Large

<sup>3</sup> does not include NJ, NY, VA psychiatric facilities

<sup>4</sup> does not include IN or NJ psychiatric facilities

the numerical decreases and the percentage decreases are computed as annual averages within the period. Decreases in ADP during each period are computed as the percentage of the population decrease for the ADP of the immediately preceding year. As shown the average annual reduction in state institution ADP in the FY 2001-2004 period (1,506 people) was by far the smallest of any period since state institution populations began to decrease in FY 1968; barely one-half (57.1%) of the next smallest averages for a 3-year period (2,636 in FY 1968-1970). As a proportional decrease, the FY 2001-2004 average annual decrease (3.1%) was smaller than any period since FY 1971-1973 (2.3%), 30 years earlier. The FY 2004 decrease of 1,169 (2.7%) was even smaller than the annual average of 2001-2003.

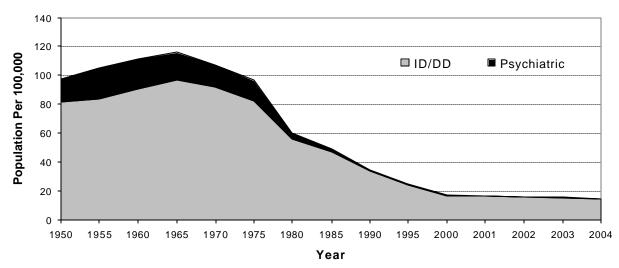

Movement of Residents in Large State ID/ DD Facilities in FY 2004

Table 1.7 presents statistics on the admissions discharges, and deaths among residents of large state ID/DD facilities during FY 2004. Admissions, discharges, and deaths are also indexed as a percentage of the average daily residents of those facilities.

Admissions. During FY 2004, a total of 2,215 persons with ID/DD were reported admitted to large state ID/DD residential facilities. This number was equal to 5.3% of the year's average daily population of those same facilities. In addition to the eight states not operating large state ID/DD residential facilities in FY 2004, four states (Arizona, Delaware, Nevada and

# Table 1.7 Movement of Persons with ID/DD In and Out of Large State ID/DD Facilities in Fiscal Year 2004 by State

DNF = did not furnish NA = not applicable

<sup>1</sup> RI now has 3 state facilities of 16+ residents

e = estimate

<sup>2</sup> does not include short-term admissions/discharges

<sup>3</sup> does not include Georgia

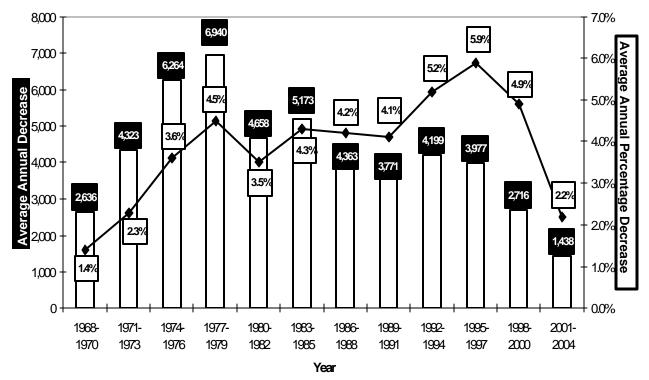

Figure 1.3 Decreases in State Institution Average Daily Populations in Three and Four-Year Periods, 1968-2004

Wisconsin) reported no admissions during FY 2004. Nine states reported admissions equaling or exceeding 10% of the year's average daily population (Colorado, Georgia, Idaho, Michigan, Minnesota, Montana, Oregon, South Dakota and Washington).

**Discharges.** During FY 2004, a total of 2,534 persons with ID/DD were reported discharged from large state ID/DD residential facilities. Discharges equaled 6.0% of the average daily population of large state ID/DD residential facilities during the year. Of the 43 states still operating large state ID/DD residential facilities, three states (Minnesota, Montana and Washington) reported discharges equal to 20% or more of their average daily residents.

**Deaths.** During FY 2004, a total of 887 people with ID/DD died while residing in large state ID/DD residential facilities. Deaths equaled 2.1% of the average daily population of the large state ID/DD residential facilities. The 2004 death rate of 2.1% was within the general range of recent years. Three of the 43 states with large state ID/DD facilities reported no deaths during the year (Maryland, Minnesota and Nevada). Total FY 2004 deaths in large state ID/DD residential facilities were 14 more than in FY 2003.

Longitudinal Movement Patterns in Large State ID/DD Residential Facilities

From the beginning of this century until the mid-1960s, resident movement statistics of large state ID/DD residential facilities indicated relatively stable movement patterns. During that period first admissions and discharges both steadily increased, but populations of large state ID/DD facilities grew as first admissions substantially outnumbered discharges. During this same period readmissions remained relatively low because once placed in a state facility, people tended to remain there. From 1903 to 1967 the annual number of deaths in large state ID/ DD facilities increased substantially, but death rates (deaths as a percentage of average daily population) decreased steadily from 4.1% to 1.9%. Table 1.8 presents movement patterns over the period 1950-2004.

By the mid-1960s these historical patterns began to change. In 1965 the number of first admissions to large state ID/DD facilities began to decrease, dropping below the increasing number of discharges by 1968. The number of readmissions increased substantially throughout the 1970s as return to the facility was a frequently used solution to problems in com-

munity placements. From 1980 to 2004, readmissions were reduced fairly steadily, but have remained a substantial, although recently decreasing, proportion of total admissions (35.7% in 1991, 30.7% in 1994, 28.4% in 1998, 26.7% in 2000, 27.1% in 2002 and 23.5% in 2004). From 1980 through 1998, total admissions (first admissions and readmissions) remained fairly consistently between 2,000 and 3,000 fewer than the number of discharges. In 1999 the difference decreased to 1,000 and since 2000 has fallen in the range of 319 to 636. Between FY2000 and 2004 about one-quarter of all people leaving large public facilities did so through death. In FY2004 deaths constituted 25.9% of the combined deaths and discharges.

Distinctions are no longer being made in the annual state survey between new admissions and readmissions because the increasing rates of large state ID/DD facility closures, consolidations, and resident transfers have made such distinctions less easily obtained from state reporting systems. Table 1.8 and Figure 1.4 show that between FY 2003 and FY 2004 overall admissions to large state ID/DD facilities increased from 2,117 to 2,215 persons, respectively.

In the past 20 years, the number of discharges has decreased greatly and by 2004 they were far fewer than the numbers of the 1970s when discharges were consistently between 14,000 and 17,000 per year. In the last 5 years, including FYs 2000 through 2004, discharges have remained in a range of about 2,400 to 2,800. In 2004 there were 2,534 total discharges, 145 fewer than in 2003.

Deinstitutionalization literally connotes a process of discharging people from large residential facilities, but Figure 1.4 shows clearly that it has also encompassed important successes in reducing placements into such facilities. The resident movement patterns shown in Figure 1.4 indicate that this latter "preventative" policy (i.e., reducing admissions to large state ID/DD facilities) has actually accounted for relatively more of the reduction in large state ID/DD facility populations over the past two decades than has the number of discharges, although both clearly have played important roles. Figure 1.4 also shows overall decrease in both admissions and discharges over the past two decades. Total deaths reported for 2004 increased slightly (1.6%) from 2003, with the rate of deaths (deaths during the year as a percentage of average daily residents) about the same as the rate of 2003. In 2004, the number of deaths as a percentage of average daily residents was 2.1% as compared with 2.0% in 2003, 1.8% in 2002, 2.0% in 2001, 1.9% in 2000, 1.9% in 1999, 1.7% in 1998, 1.4% in 1997, 1.7% in 1996, and 1.7% in 1995.

### Annual Per Resident Expenditures

**Fiscal Year 2004 per resident expenditures for all residential settings.** Table 1.9 summarizes the expenditures for state ID/DD residential settings with 1-6, 7-15, and 16 or more residents. Data on the average daily expenditures for large state ID/DD residential facilities were reported by all states. All states with state ID/DD settings of 7-15 residents except Connecticut reported an average daily expenditure per resident for those settings and all states with ID/DD settings of 1-6 residents except Connecticut and Iowa reported an average daily expenditure per resident for those settings.

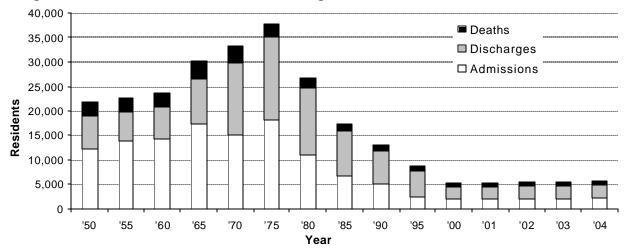

Figure 1.4 Movement Patterns in Large State ID/DD Facilities, 1950-2004

Average per resident daily expenditures in large state ID/DD residential facilities varied considerably across the United States with a national average of \$380.81. Twenty states reported costs in large state ID/DD residential facilities that exceeded \$400.00 per day in FY 2004 (California, Colorado, Connecticut, Delaware, Idaho, Indiana, Massachusetts, Michigan, Minnesota, Montana, New Jersey, New York, North Dakota, Oklahoma, Oregon, Pennsylvania, Tennessee, Washington, Wisconsin, and Wyoming). Among the 43 states operating large state ID/DD residential facilities in FY 2004, 25 reported annual expenditures per resident above the national annual average of \$138,995.65 per person per year. Mississippi reported the lowest average daily expenditure per resident for large state ID/DD residential facilities (\$222.00 per day or \$81,030 per year) and Minnesota the highest (\$853.59 per day or \$311,560.35 per year).

Between FYs 2003 and 2004 the average daily expenditure per resident of large state ID/DD residential facilities increased by \$21.57 (6.0%). This increase in per person expenditures was slightly more than the average of just less than 6% per year since FY 1990. Adjusted for changes in the Consumer Price Index the FY2004 increase was 3.2%. Increases in expenditures in recent years contrast with the 1980s in which expenditure increases for large state ID/DD residential facilities averaged about 11.6% per year, in part because fewer and fewer residents were sharing the fixed costs of a stable number of facilities. Closure of some 137 large state ID/DD residential facilities and special ID/DD units between 1988 and 2004 and consolidation of other facilities contributed to reducing the effects of these fixed costs in average per resident expenditures. (These closures and consolidations are described in Chapter 2.)

National average expenditures for state community ID/DD residential settings were \$347.28 per resident per day in settings of 6 or fewer residents, and \$390.87 in settings with 7-15 residents. Nationally, the average per diem of state ID/DD residential settings with 1-6 residents was less, and that of settings with 7-15 residents was more, than that of large state facilities with 16 or more residents. Of the fifteen states reporting both community and large state ID/ DD setting expenditures, the average per diem expenditures in large state ID/DD facilities were higher than the average per diem expenditures in the state community settings in twelve states. Kentucky, North Carolina and Rhode Island reported higher per diem costs in community settings.

Longitudinal trends of large state facility expenditures. The per person expenditures for residents with ID/DD of large state ID/DD facilities have increased dramatically since 1950, when the average per person annual expenditure for care was \$745.60. As shown in Table 1.10, even in dollars adjusted to 2004 dollars to control for changes in the Consumer Price Index over this period, average expenditures for care in 2004 (\$138,995.65 per year) were nearly 24 times as great as in 1950.

Figure 1.5 shows the trends in large state ID/DD facility expenditures in both actual and adjusted dollars (\$1=2004) between 1950 and 2004. In terms of 2004 "real dollar" equivalents, the average annual per resident expenditures in large state ID/DD facilities increased from about \$5,825 to \$138,996 during the 54 year period. That rate of increase represents an

annual, after inflation, compounded growth of 5.7% per person per year. However, in the 1990s and beyond the rate increases have slowed substantially. Between FYs 1990 and 2004 states reported a 34.2% real dollar increase in large state ID/DD facility expenditures, an average of 2.4% annually. This compares to an average real dollar increase of 8.1% per year during the 1980's.

Major factors in reducing the rate of growth of large state ID/DD facility expenditures have been the large number of facility closures (see Chapter 2 of this report), greater control of expenditures for public institutions in state human service budgeting, and a reduction of the effects of other factors that had been contributing to the steady cost increases such as the growing proportion of persons with severe impairments. For example, between 1977 and 1996 the proportion of residents with profound mental retardation increased from 45.6% to 64.9%, but from 1996 to 2004 it actually decreased slightly to 61.6%.

In addition, the upward pressure on expenditures of the Intermediate Care Facility for Persons with Mental Retardation (ICF-MR) program has largely abated as virtually all state facility units have been certified. The ICF-MR program (described in Section III) offers federal cost-sharing through Medicaid of 50-80% of state facility expenditures under the condition that facilities meet specific program, staffing, and physical plant standards. The ICF-MR program has significantly contributed to and cushioned the impact of rapidly increasing large state facility costs. For example, in 1970, one year before enactment of the ICF-MR program, the average annual per resident real dollar (\$1=2004) expenditure in large state ID/DD facilities was about \$21,906.02. By 1977, more than 70% of all large state facilities were certified as ICFs-MR and average annual real dollar costs had more than doubled to \$50,292.68 a 122% increase in 7 years. Between 1970 and 2004, large state ID/DD residential facilities' real dollar expenditures grew by 514.8%, but the states' share of the increased real dollar expenditures for large state facilities was less than onethird of the total as the ICF-MR program paid an average of 59.74% of large state facility costs that in 1970 were paid exclusively by the states. Court decisions and settlement agreements also had significant impact on large state facility expenditures with their frequent requirements for upgrading staffing levels, adding programs, improving physical environments, and, frequently, reducing resident populations.

# Chapter 2

# Large State ID/DD Residential Facilities, 1960-2004, Individual Facility Populations, Per Diem Costs, and Closures in 2004 and Projected in 2005

Kathryn Coucouvanis, Robert W. Prouty, K. Charlie Lakin

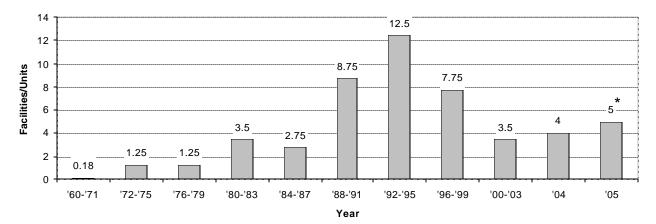

This chapter summarizes information on each of the large (i.e., 16 or more residents) state ID/DD facilities and special ID/DD units in psychiatric facilities that have operated since 1960. It includes their present and projected operational status, populations, and costs. Responses were obtained from 183 of 184 surveyed facilities.

Large State ID/DD Residential Facilities Operating and Closing, 1960-2004

Table 1.11 presents a state-by-state breakdown of the total number of large state ID/DD facilities and ID/DD units operated since 1960, and the number closed and projected to be closed between 1960 and December 2005. Since 1960, 39 states have closed one or more facilities to a total of 173 closures. Nine states (Alaska, Hawaii, Maine, New Hampshire, New Mexico, Rhode Island, Vermont, and West Virgina) with a total of 22 large state ID/DD residential facilities have closed all of them. Twelve states with a total of 38 large state ID/DD residential facilities have neither closed a facility since 1960 nor have plans to do so. More than two-thirds (26) of the facilities operated in these 12 states are located in Arkansas, Louisiana, Mississippi, and South Carolina. Total Large State ID/DD Facility Closures

Figure 1.6 shows the number of large state ID/DD facilities and ID/DD units in large state facilities primarily serving other populations that have closed since 1960, including projected closures by the end of 2005. As shown, between 1960 and 1971 only two large state ID/DD facilities were closed in the United States, an average of 0.18 per year. Between 1972-1975 there were a total of five closures, an average of 1.25 per year. There were five closures in the period between 1976-1979, an average of 1.25 per year. There were 14 closures between 1980-1983, an annual average of 3.5 per year. Between 1984-1987, there were 11 closures, an average of 2.75 per year. In the years 1988-1991, closures increased rapidly to a total of 35, an average of 8.75 per year. Closures averaged 12.5 per year between 1992-1995 (50 total). There were 31 closures in the years 1996-1999, an average of 7.75 per year. Between 2000 and 2003, a total of 14 closures averaged 3.5 per year. In 2004 five facilities were closed or consolidated. Five facilities (one each in Florida, Georgia, Indiana, Ohio and Pennsylvania) are projected to close by the end of 2005.

<sup>1</sup> two facilities opened in 2000 \*through calendar 2005

<sup>2</sup> three facilities opened in 2000

<sup>3</sup> includes a facility in LA first reported in 2003

<sup>4</sup> includes 4 facilities previously reported as one

 $^{\rm 5}$  includes only developmental centers operated by NY State Office of ID/DD

<sup>6</sup> Harold Jordan (TN) is now reported as part of Clover Bottom

The number of facility closures annually has varied over time from none to a high in 1994 of 21. In only four other years have there been 10 or more closures: 1988 (14), 1992 (10), 1996 (11), and 1998 (11). Thirty-nine percent of all closures occurred in those five years.

#### Individual Large State ID/DD Facility Populations and Per Diem Rates

Table 1.12 provides information about the 357 state ID/DD residental facilities operating since 1960, including the populations, resident movement and per diem rates reported by 182 of the 183 large state residential facilities that remained open to serve persons with ID/DD on June 30, 2004. The total number of residents with ID/DD in individual large state facilities on June 30, 2004 ranged from a high of 792 residents in California's Sonoma Developmental Center to 25 or fewer residents in eight state facilities.

The reported per diem rates ranged from \$183.00 to \$853.59. Some variations in reported costs can be noted between the facility statistics and the aggregated, state-reported statistics in Table 1.9. The differences derive from variations in accounting for all state versus individual facility expenditures, including variations in the absorption of state agency administrative expenditures into the rates reported by the states, exclusion of costs of some off-campus services in the individual facility rates, and other variations in cost accounting.

#### Changes in Populations of Large State ID/ DD Facilities

Of the 183 large state ID/DD residential facilities with 16 or more residents on June 30, 2004, 49 (26.6%) reported an increase in population between June 30, 2003 and June 30, 2004, 44 (89.8%) of which reported an increase of 10% or less. Among the remaining 5 facilities, the increases ranged from 15.3% to 30.7%.

In the same period, 114 facilities reported a reduction in their population. Of these, 90 (78.9%) reported decreases of 10% or less, 15(13.2%) reported decreases between 10.1% and 20%, and 9 (7.9%) reported decreases between 21% and 72%. Twentyone facilities reported no change in their resident populations.

Table 1.13 presents the large state facility population change by state. Of the 42 states operating large facilities on June 30, 2004, 37 reported a decrease in their population of persons with ID/DD: 33 (89.2%) reported a decrease of less than 10%, 3 (8.1%) re-

ported a decrease of 10-20%, and one state (2.1%) reported a decrease of more than 40%. Four states reported increases in the populations of their large state facilities, ranging from 2.2% in Colorado to 8.4% in Wyoming. One state, Idaho, reported no change.

Nationally, annual decline in population of large state residential facilities for persons with ID/DD averaged 2,222 from 1996 to 2004, from a total of 58,320 in June 1996 to 40,542 in 2004.

# **Chapter 3**

# **Characteristics and Movement of Residents of Large State Facilities**

### K. Charlie Lakin, Robert W. Prouty, Kathryn Coucouvanis and Soo Yong Byun

This chapter provides information about the characteristics and movement of residents of large state residential facilities for persons with intellectual disabilities/developmental disabilities (ID/DD) in FY 2004. It is based on a survey of all large state-operated facilities for persons with ID/DD with 16 or more residents or distinct ID/DD units for 16 or more persons within large state facilities primarily serving other populations. A description of the state facility survey is provided in the "Methodology" section ("Individual State Residential Facility Survey").

**Characteristics of Residents** 

Table 1.14 presents a summary of selected age, diagnostic and functional characteristics of residents of large (16 or more residents) state ID/DD residential facilities for persons with ID/DD (hereafter "large state facilities") on June 30 of 1977, 1987, 1998, 2000, 2002 and 2004.

### **Age of Residents**

There has been a continuing aging of the population of residents of large state facilities since 1977. Age statistics are based on reporting large state facilities for June 30 of 1977, 1987, 1991, 1996, 1998, 2000, 2002 and 2004. These statistics are based on

# Table 1.14 Characteristics of Residents of Large State ID/DD Facilities fromJune 30, 1977 through June 30, 2004

NC = statistic not collected in that year

The 2004 data are based on reports of large state facilities housing 81.5% to 86.3% (depending on the characteristic) of the 41,653 large state facility residents on June 30, 2004. Response rates obtained in earlier years shown ranged from 76.0% to 91.5%.

the reports of state facilities housing 81.5% of all residents on June 30, 2004 (and between 76% and 91.5% in earlier years). As shown in Table 1.14, the proportion of children and youth (birth to 21 years) living in large state facilities declined from 35.8% of all residents in 1977 to 4.3% of all residents in June 2004. Despite the substantial increase in the proportion of residents 63 years and older in large state facilities, from 3.7% in 1977 to 9.8% in 2004, the total number of residents 63 and older actually decreased by about 1,310 residents (to an estimated 4,082) between 1977 and 2004.

The most notably changing age cohort of state facility residents in recent years has been that of "middle age" persons (40-62 years). Between 1991 and 2004 this group grew from 32.5% to 59.9% of all large state facility residents, as the demographics of the "baby boom" became increasingly evident. In June 2004, 69.7% of all large state facility residents were 40 years or older. This compares to 22.9% in June 1977, 33.3% in June 1987, 50.4% in June 1996 and 64.6% in June 2002.

Despite the rapid proportional growth in persons 40 years and older, between June 30, 1996 and June 30, 2004, the actual number of individuals 40 years and older living in large state facilities decreased by more than 400 persons. The overall decrease in large state facility residents who were 40 years or older was entirely attributable to the decreased number of residents who were 63 or older. In June 2004 the estimated number of residents in the 40-62 group was almost exactly the number as estimated

in June 1996 (24,905 and 24,903 respectively), while and the number of persons 63 or older decreased by about 410. As will be evident from admission statistics presented later, the shifts among the age categories during the last eight years was primarily because the stable residential population of the large state facilities grew older and "aged out" of the young adult category (22-39 years) and into the middle-aged category. Middle-aged individuals being admitted to large state facilities contributed relatively little to these shifts.

As shown in Figure 1.7, the June 30, 2004 estimate of 1,771 children and youth (0-21 years) making up 4.3% of the large state facility population nationwide reflects the dramatic decreases during the second half of this century and particularly the past quarter century. In 1950, 48,354 of the 124,304 large state facility residents (38.9%) were 21 years or younger. By 1965 the population of children and youth had increased to 91,592 and made up 48.9% of all large state facility residents. Subsequent annual decreases brought the population of children and youth to 54,098 (35.8%) in 1977, 12,026 (12.7%) in 1987, 6,908 (8.7%) in 1991, 2,916 (5.0%) in 1996, 2,130 (4.5%) in 2000, 1,983 in June 2002 (4.5%) and eventually to 1,771 in June 2004 (4.3%).

### Level of Intellectual Disability

Table 1.14 also presents a breakdown of the reported level of intellectual disability of residents of large state facilities on June 30 of 1977, 1987,

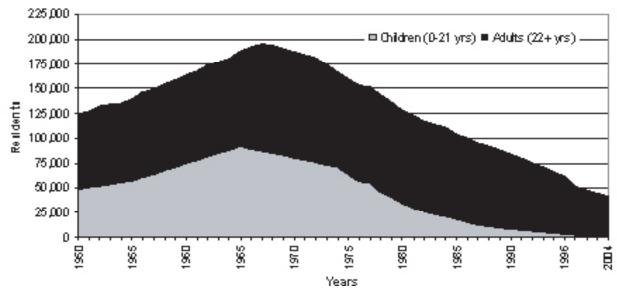

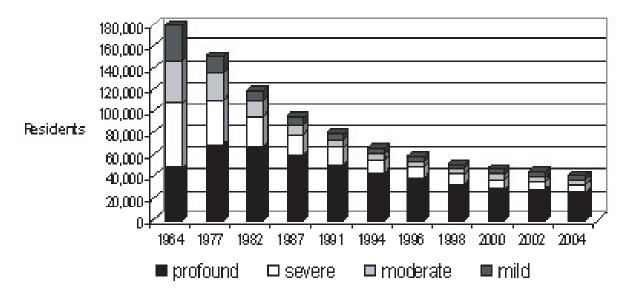

Figure 1.7 Total and Childhood (0-21 Years) Populations of Large State ID/DD Facilities, 1950-2004

1996, 1998, 2000, 2002 and 2004. In 2004, based on the reports of facilities housing 81.5% of all large state facility residents, there were an estimated 4,268 large state facility residents with mild or no intellectual disability (10.2% of all residents) as compared with an estimated 15,716 in 1977, 6,818 in 1986, 4,316 in 1996, and 3,913 in 1998. Between 1998 and 2000 the proportion and total number of state institution residents with mild or no intellectual disability increased by about 900 persons but has slowly decreased at a rate about equal to overall facility depopulation, and 4,826 in 2000 and 4,583 in 2002. It is notable that the proportion of persons with mild or no intellectual disabilities in large state facilities, after having decreased by each year since 1962, from 20.7% in 1962 to 7.4% in 1996, began increasing in 1998 (to 7.6%) and continued to 2000 (to 10.2%). Since then it appears to have stabilized at about 10.2% to 10.4% of all residents. There were approximately 355 more persons with mild or no intellectual disabilities in large facilities in June 2004 than there were in June 1998.

Between 1996 and 2004 populations of persons with moderate and severe intellectual disability decreased slightly more rapidly than large state facility residents as a whole. The proportion of large state facility populations with profound intellectual disabilities increased substantially from 1977 to 2004, from 45.6% residents to 61.6% of all residents, but between 1996 and 2004 that proportion decreased (from 65.9% to 61.6%).

Despite the general increases in the proportion of residents with profound intellectual disabilities between 1977 and 2004, their actual numbers decreased by about 43,250 people, from 68,907 to an estimated 25,660 people. Between June 30, 1987 and June 30, 2004 the number of large state facility residents with profound intellectual disability decreased by almost 34,000 people or 57.0%. Between June 1996 and June 2004 residents with profound intellectual disability decreased by about 12,800 persons.

Figure 1.8 shows the same basic statistics as those in Table 1.14 with the addition of 1964 and 1982 surveys (Scheerenberger, 1965, 1983). It shows that between 1964 and 1977, while large state facility populations decreased by about 38,500 residents, the number of residents with profound intellectual disabilities actually increased by about 20,000. During the same period the number of large state facility residents with mild, moderate, severe or no intellectual disabilities decreased by nearly 50,000 people from 131,100 to 82,000. However, since 1977 and more notably since 1987, persons with profound intellectual disabilities have been decreasing among large state facility populations at rates similar to, indeed slightly faster than, persons with less severe intellectual impairments.

### Figure 1.8 Level of Intellectual Disability of Residents of Large State ID/DD Facilities on June 30 of Selected Years, 1964-2002

#### **Functional Characteristics**

Table 1.14 also shows the percentage of residents of large state facilities reported to have functional limitations in various important activities of daily living. In this study, each of the large state facilities surveyed was asked to report the number of their residents who: 1) "cannot walk without assistance or supervision," 2) "cannot communicate basic desires verbally," 3) "cannot use the toilet without assistance or supervision," 4) "cannot feed self without assistance or supervision" and 5) "cannot dress self without assistance or supervision." National statistics for 2004 are shown in Table 1.14 with comparable statistics from 1977, 1987, 1996, 1998, 2000, 2002 and 2004.

Between 1987 and 1996 there was an increasing proportion of large state facility residents with functional limitations requiring assistance. Between 1996 and 2004 the proportions of residents reported to require assistance with activities of daily living remained quite stable. In 2004, 36.8% of large state facility residents were reported to need assistance or supervision in walking and 54.9% to be unable to communicate basic desires verbally. Over half (53.6%) of large state facility residents were reported to be unable to use the toilet independently without assistance or supervision. Half (51.0%) were reported to be unable to feed themselves without assistance or supervision. More than three-fifths (59.8%) of residents were reported to need assistance or supervision in getting dressed.

Between 1987 to 2004 there were increases in the percentage of residents with substantial limitations in toileting themselves (46.6% to 53.6%) and feeding themselves (37.8% to 51.0%). Again, however, the proportion of residents with limitations in these areas were lower in June 2004 than in June 1998. As will be shown subsequently, there was considerable interstate variation around these averages.

#### Age by Level of Intellectual Disability

Table 1.15 shows the distribution of residents of large state facilities by age and level of intellectual disability. Facilities housing 81.5% of all residents on June 30, 2004 reported this distribution. Clearly middle-aged residents (40-62 years) were more likely to have profound cognitive limitations than residents who were relatively younger or older. Only 57.0% of residents 63 or older and 56.1% of residents 22-39 vears had profound intellectual disabilities as compared with 67.1% of 40-54 year olds and 64.1% of 55-62 year olds. Children and youth (0-21 years and young adults 22-39 years) tended to have less severe intellectual disabilities than the general population of residents. This continued a trend beginning in 1998 with a notable increase in the number of adolescents and young adults (15-21 years) with mild or moderate intellectual disabilities between June 1998 and June 2004, from an estimated total of 695 (adjusted for non-reporting) in 1998 to 811 in 2004.

One of the most remarkable demographic statistics is that a substantial majority of large state facility

# Table 1.15 Distribution of Residents of Large State Facilities by Level of Intellectual Disability and Age on June 30, 2004

NA= not applicable (state without large state facilities)

DNF= data not furnished or insufficient reporting (60% or fewer of residents included)

residents (54.4%) are non-elderly adults (ages 22-62 years) with profound intellectual disabilities. Over three-quarters (75.1%) of large state facility residents are adults between 22 years and 54 years old.

### **State-by-State Resident Characteristics**

State-by-state statistics on resident characteristics are based on aggregated data on all reporting large state facilities in each state. State breakdowns are provided only for states in which the reporting facilities for any specific characteristics housed at least 60% of all large state facility residents.

#### **Gender of Residents**

Table 1.16 shows the distribution of large state facility residents by gender. In all states but Delaware, the majority of residents were male. Nationally, 63.1% of residents were male, with states ranging from lows of less than 55% in Arizona, Delaware, Pennsylvania and Wyoming to more than 75% in Colorado and Michigan. The proportion of male large state facility residents has slowly increased in recent years (57.0% in 1977, 57.4% in 1982, 59.0% in 1989, 58.5% in 1991, 59.3% in 1994, 60.0% in 1996, 60.4% in 1998, 61.0% in 2000, 62.8% in 2002 and 63.1% in 2004).

#### Age Distribution of Residents

Table 1.17 presents the state-by-state age distribution of residents in large state facilities on June 30, 2004. The table shows the great variability across states in the ages of residents. Differences were particularly notable in the number of children and youth (0-21 years) and the number of older residents (55 years and older).

Nationwide, 4.3% of all large state facility residents were 21 years or younger. Eight states reported 10.0% or more of their large facility residents as being in the 0-21 year age range (2 more than in 2002, but fewer than the number in 1991). In 1996 and 2004, 47 states reported statistics for at least 60% of the total large state facility population in both years. In all but 11 of these states there was a reduction in the proportion of residents 21 years and younger or total closure of large public facilities. There was an actual decrease in the number of residents 21 years and younger in all but 3 states.

Nationally 23.6% of large state facility residents were 55 years and older, as compared with 14.9% in 1996, 16.8% in 1998, 18.4% in 2000 and 20.4% in 2002. Individual states ranged from more than a quarter of all residents being 55 years and older in

 Table 1.17 Age of Residents of Large State Facilities by State on June 30, 2004

NA = not applicable (state without large state facilities) DNF = did not furnish data or insufficient reporting (50% or fewer of residents included)

12 states to less than 10% of all residents in this age range in 5 states.

On June 30, 2004 large state facility residents between 40 and 54 years of age made up 46.1% of all residents, a proportion that increased from 26.2% in 1991, 35.5% in 1996, and 44.2% in 2002. In the same period (1991-2004) the proportion of all residents 40 years or older increased from 39.5% to 69.7% of large state facility residents nationally. The proportion of large state facility residents who are 40 years or older is substantially greater than the 44.3% of the general U.S. population in this age range, but it is clearly being influenced by the same demographic trend, the aging of the "baby boom" generation.

In contrast, children and youth (birth to 21 years), made up about 29.4% of the U.S. population, but only 4.3% of the large state facility population. One reason for the disproportionately low rates of large state facility placements among children and youth are the relatively low overall rates of out-of-home placement of children and youth. In 1997 it was estimated that only 7.7% of all persons with ID/DD in all public and private out-of-home placements were between birth and 21 years (Lakin, Anderson & Prouty, 1998).

A more specific factor with respect to large state facilities is the concerted effort by most states to restrict the admission of children to them. This is particularly evident at the younger ages. In twenty-nine of 49 reporting states there were no large state facility residents younger than 15 years and in 11 additional states children 14 years or younger made up less than 1% of all residents. Nationwide, 20.9% of the population is made up of persons 14 years and younger, but only 0.6% of large state facility populations and 4.3% of all admissions to large state facilities in FY 2004 were persons 14 years and younger. In 1965 the majority of persons admitted to large state facilities were 11 years of age or younger (NIMH, 1966).

Persons 63 and older made up about 14.0% of the U.S. population, and 8% of the large state facility population. A primary reason for the lower proportion of persons 63 years and older in large state facilities than in the general population is the continued high use of nursing facilities for the long-term care of older persons with a primary diagnosis of intellectual disabilities and developmental disabilities. The estimated 4,082 persons 63 years and older in large state facilities in 2004 was considerably less than the 12,200 persons 63 and older with a primary

NA= not applicable (state without large state facilities)

DNF= data not furnished or insufficient reporting (60% or fewer of residents included)

diagnosis of intellectual disabilities in nursing facilities based on the total 2004 nursing facility residents in this survey and the estimated 37% of nursing home residents with a primary diagnosis of intellectual disability who were 63 years or older as estimated in the 1985 National Nursing Home Survey (Lakin, Hill, and Anderson, 1991).

### **Level of Intellectual Disability**

Table 1.18 presents the state-by-state distributions of residents of large state facilities by reported level of intellectual disability. Thirty-nine states are reported; 8 states are not included because they operated no large state facilities at the time of this survey. In one state the large state facilities reporting this statistic had less than 60% of the total state facility population and was excluded.

In Table 1.18 persons reported not to have intellectual disabilities have been included in the "mild" intellectual disabilities group. Nationally 61.6% of large state facility residents were indicated to have profound intellectual disabilities. In all but 12 states a majority of the large state facility residents were reported to have profound intellectual disabilities.

Nationwide, 20.7% of residents were reported to have mild or moderate intellectual disabilities. In 16 states, persons with mild or moderate intellectual disabilities made up more than a quarter of large state facility populations; in 9 states less than 10%. As shown in Table 1.14 the proportion of residents with mild intellectual disabilities has increased modestly nationwide in recent years, related in part to the increasing proportion of residents indicated to have psychiatric and behavioral disorders. In 2004 62.2% of large state facility residents were reported to have psychiatric disorders and 52.3% to have behavioral disorders, an increase from 31.0% and 45.7% respectively since 1996.

### **Selected Additional Conditions**

Table 1.19 presents the reported prevalence of selected secondary conditions of large state facility residents.

**Blind.** Nationwide, 12.4% of large state facility residents were reported to be functionally blind in June 2004 (defined as having little or no useful vision). This compares with 12.6% in 1991, 15.3% in 1996, and 13.5% in 2002. Fourteen states reported 15% or more residents to be functionally blind.

**Deaf.** Nationally, 6.4% of large state facility residents were reported to be functionally deaf (having little or no useful hearing). This compares with 5.6% in 1991, 7.4% in 1996 and 6.6% in 2002. Seven states reported more than 10% of residents being functionally deaf.

**Epilepsy.** Nationwide, 42.7% of large state facility residents were reported to have epilepsy. This compares with 44.6% in 1991, 46.1% in 1996, and 45.0% in 2002. Thirty of 40 states reported prevalence rates for seizure disorders among large state facility residents of between 30% and 60%.

**Cerebral Palsy.** Nationwide, 18.0% of large state facility residents were indicated to have cerebral palsy. This compares to a reported rate of 21.6% in 1991, 22.6% in 1996, and 19.4% in 2002. The reported prevalence of cerebral palsy varied from state to state. In 13 of 39 reported states a quarter or more of large state facility residents were reported to have cerebral palsy.

**Behavior Disorder.** Individual large state facilities were asked to report the number of their residents with behavior disorders. *Behavior disorder* was defined simply as "behavior that was sufficiently problematic as to require special staff attention." The absence of a definition expressed in behavioral terms of frequency or severity may account for some of the deviation among states from the national average of 52.3%. In 11 states, 60% or more of large state facility residents were reported to have behavior disorders; in 9 states less than 40% of the large state facility residents were reported to have behavioral disorders. The reported prevalence of behavioral disorders has increased from 40.7% to 52.3% between 1987 and 2004.

**Psychiatric Condition.** Individual facilities were also asked how many of their residents have *psychiatric disorders* defined as "requiring the attention of psychiatric personnel." Nationwide, 47.9% of large state facility residents were reported to be receiving psychiatric attention for psychiatric conditions. This statistic was first collected in 1994 when a prevalence of 30.6% was reported. It has steadily increased in each survey since: 31.0% 1n 1996, 34.3% in 1998, 42.0% in 2000, 45.7% in 2002, and 47.9% in 2004. Twenty-seven of 40 reporting states reported rates between 35% and 65%.

**Multiple Conditions.** In all 62.2% of large state facility residents were reported to have two or more of the above conditions in addition to intellectual disabilities. Twenty-five states reported 60% or

NA = not applicable (state without large state facilities) DNF = data not furnished or insufficient reporting (50% or fewer of residents included)

more of their of large state facility residents as having multiple conditions.

**Medications for Mood, Anxiety, or Behavior.** Half (50.0%) of all residents of large state facilities are reported to receive prescribed medications for mood, anxiety or behavior problems. Rates of medication fell between 35% and 65% in 25 of 39 reporting states.

# Selected Functional Assistance Needs of Residents

Table 1.20 presents selected functional limitations of residents of large state ID/DD facilities.

**Walking.** Nationwide, 36.8% of residents of large state facilities were reported to need assistance or supervision in walking. This was relatively similar to the 32.4% reported in 1991, 35.7% in 1996, and 37.0% in 2002. Reported rates varied from 0.0% in Minnesota to more than half of all residents in 10 states.

**Dressing.** Nationwide, 59.8% of large state facilities residents were reported to need assistance or supervision in dressing. This compares with 61.1% in 1991, 66.1% in 1996, and 62.6% in 2002. In 18 states two-thirds or more of large state facility residents were reported to need assistance dressing. Only ten states reported less than 50% of their large state facility residents in need of assistance or supervision in dressing.

**Eating.** Nationwide, 51.0% of large state facility residents were reported to need assistance or supervision feeding themselves. This compares with 50.9% reported to need assistance in feeding themselves in 1996 and 51.4% in 2002. Sixteen states reported that 60% or more of their large state facility residents needed help or supervision in eating while 10 states indicated that 40% or less of their large state facility populations needed assistance or supervision in eating.

**Understanding.** Nationwide, 30.0% of large public facility residents were reported not to be able to understand simple verbal requests. States ranged from less than 20% of residents not understanding simple requests in 12 states to more than 50% in 6 states.

**Communicating.** A total 54.9% of large state facility residents were reported to be unable to communicate their basic desires verbally. This compares with 59.4% in 1996, and 58.1% in 2002. Fourteen states reported more than two-thirds of their large state

facility residents could not communicate verbally; 6 states reported less than 50% of their large state facility residents could not communicate their basic desires verbally.

**Toileting.** Nationwide, 53.6% of large state facility residents were reported to need assistance or supervision with toileting. This was an increase from the 46.6% reported in 1987, but slightly less than the 57.0% reported in 1996 and the 55.9% reported in 2000. Sixteen states reported more than two-thirds of large state facility residents needing assistance with toileting; 10 states reported less than 40% of large state facility residents needing assistance or supervision with toileting.

# **Residents in Movement**

# New Admissions by Age and Level of Intellectual Disability

Table 1.21 presents the distribution of persons newly admitted to large state facilities in FY 2004 by their age and level of intellectual disability. Data reported in Table 1.21 were supplied by large state facilities with 87.4% of reported admissions. As shown in Table 1.20 persons newly admitted to large state facilities in FY 2004 presented a different profile from the general large state facility population on June 30, 2004. In general they were considerably younger and less severely cognitively impaired than the general population. For example, 4.3% of the total large state facility population was 0-21 years old as compared with 31.8% of the new admissions. While 3.7% of the general large state facility population was made up of persons 15-21 years, 27.3% of new admissions were in this age group. In contrast, while persons 40 years and older made up 69.7% of the large state facility populations, they made only 30.0% of the new admissions. Of course, the relatively higher proportion of young people in the new admission category as compared with general facility population reflects the fact that most people entering residential programs do so in adolescence or young adulthood. In general, between 1987 and 2004, the proportion of children and youth (0-21 years) among new admissions has not changed appreciably, ranging between 31%-35%. Newly admitted middle aged and older residents (40 years and older) have also remained quite stable between about 23.0% and 30.0% of all new admissions.

Newly admitted large state facility residents in FY 2004 were much more likely to have mild intellectual disabilities or and considerably less likely to have profound intellectual disabilities than the

# Table 1.20 Selected Functional Needs of Residents of Large State Facilities by State on June 30, 2004

NA = not applicable (state without large state facilities) DNF = data not furnished or insufficient reporting (50% or fewer of residents included)

general large state facility population. Persons with mild intellectual disabilities made up 45.7% of new admissions as compared with 10.2% of the general large state facility population. Higher proportions of persons with mild intellectual disabilities among new admissions has been a notable trend in recent years (43.2% in 2002, 42.0% in 2000, 37.8% in 1998, and 31.1% in 1996).

Persons with profound intellectual disabilities made up only 20.3% of new admissions as opposed to 61.6% of the total large state facility population. Persons with profound intellectual disabilities made up 19.9% of new admissions in 2002, 18.9% in FY 2000, 24.5% in 1998, and 28.7% in 1996.

Children and young adults (birth to 39 years) with mild or no intellectual disabilities (ID) made up 36.6% of all new admissions in FY 2004. This was an increase in the proportion of children and young adults with mild ID among new admissions from 2002 (35.6% of all new admissions), 2000 (33.9% of all new admissions), 1998 (31.0%) and 1996 (25.7%). As will be seen in Table 1.23, children and young adults also make up a higher proportion of discharges, indicating that large state facilities continue to function as relatively short-term entry and/or "crises response" points for state residential services systems.

### **Readmissions by Age and Level of Intellectual Disability**

Table 1.22 presents the distribution of persons readmitted to specific large state facilities in FY 2004 by their age and level of intellectual disability. The large state facilities reporting data for Table 1.22 had

87.3% of all reported readmissions. The profile of readmissions shown in Table 1.22 is more similar to that of new admissions than of the general population, although, as would be expected, is older than that of the new admissions (e.g., 45.7% as compared with 30.0% being 40 years or older). As with new admissions there was a relatively high proportion of persons with mild or no intellectual disabilities (37.4% as compared with 10.2% in the general large state facility population) and a relatively low proportion of persons with profound intellectual disabilities (25.9% as compared with 61.6% in the general large state facility population). Readmissions in 2004 broke pattern from what had been a growing proportion of persons with profound intellectual disabilities among readmissions (26.5% of readmissions in 1991, 33.9% in 1996 and 37.6% in 2000). If the previous pattern reflected growing numbers of former residents who had moved to community settings which were unable to meet their needs, perhaps the decrease in the proportion of readmissions with profound intellectual disability reflects improved community service capacity.

While persons readmitted were slightly older than new admissions, they tended to be younger than the general large state facility population (e.g., 16.9% vs. 4.3% were 21 years or younger; 2.4% vs. 9.8% were 63 years or older). The proportion of children and youth (0-21 years) among all readmissions (16.9%) was not much different than 19.0% in 1989, but the estimated total number of children and youth readmitted to large state facilities decreased from an estimated 292 in 1989 to an estimated 88 (adjusted for non-reporting) in 2004, as total readmissions were substantially reduced.

Level of Intellec-			Chro	nological A	ge in Years				Total (%

Table 1.21 New Admissions to Large State Facilities by Age and Levelof Intellectual Disability in the Year Ending June 20, 2004

Note: Statistics on new admissions by level of intellectual disability include 1,480 of (87.4%) of 1,694 total new admissions among reporting state facilities in FY 2004. Statistics reported by individual facilities in this table include "transfers" from other large state facilities (see Table 1.24

# Discharges by Age and Level of Intellectual Disability

Age. Table 1.23 presents the age distributions and level of intellectual disabilities reported for 2,185 people discharged from large state facilities in the year ending June 30, 2004. Table 1.23 is based on reports from facilities with 86.2% of all discharges in FY 2004. The age distribution of large state facility discharges was considerably more similar to the age distribution of the general large state facility population than were the persons admitted. Persons between the ages of 22 and 54 made up 66.6% of discharges and 72.1% of the general large state facility population. Persons 55 and older made up 23.6% of the general population and 14.3% of the persons discharged. Like children and youth (0-21 years) admitted to large state facilities, the proportion of children and youth being discharged was substantially greater than the proportion of children and youth in the general large state facility populations (19.0% of discharges as compared to 4.3% of the general population). Although large state facilities continue to admit substantial numbers of children and youth, they appear to be generally quick to discharge them.

**Intellectual Disability.** The levels of intellectual disability of persons discharged tended to fall in a range between that of persons being admitted during FY 2004 and the general population of those same large state facilities. Persons with profound intellectual disabilities made up 38.6% of discharges, as compared to 21.6% of combined new admissions and readmissions and 61.6% of the general large state facility population. Persons with mild or no intellectual disabilities made up 30.8% of discharges, 43.8% of combined new admissions and

readmissions and 10.2% of the general large state facility population. Overall, persons discharged outnumbered persons admitted (new and readmitted) in the reporting facilities by about 14.4%. Persons with severe and profound intellectual disabilities discharged outnumbered these admitted by 102% (426 persons). In notable contrast, there were 22.2% more admissions than discharges of persons with mild and moderate intellectual disabilities during FY 2004.

# **Persons in Movement in 1989 through** 2004

Figure 1.9 compares the number and distribution by level of intellectual disability of newly admitted, readmitted and discharged residents of individual large state facilities in FYs 1989, 1996, 2002 and 2004. Admission patterns were generally similar during these years, although there were steadily fewer persons in each of these categories, in large part because the June 30, 2004 population of large state facilities was 45,761 persons fewer than in June 1989. In 2004, the estimated total of new admissions and readmissions (2,215) was 41.4% of the number in 1989 (5,337). Discharges in 2004 (2,534) were 41.4% of those in 1989 (6,122). This general pattern of decreasing movement into and out of large state facilities has been evident for many vears. For example, the combined new admissions and readmissions in 2004 were just 19.9% of the total in 1980 (11,141); discharges in 2004 (2,534) were just 18.6% of the discharges in 1980 (13,622).

In 1989, 26.9% of combined new admissions and readmissions had mild or no intellectual disabilities as compared to 43.8% in 2004. In FY 2004, 21.6% of new admissions and readmissions had profound intellectual disabilities as compared to 34.7% in

# Table 1.23 Discharges from Large State Facilities by Age and Level ofIntellectual Disability in theYear Ending June 30, 2004

Note: Statistics on discharges by level of intellectual disability include 2,185 (86.2%) of 2,534 total discharges among reporting facilities in FY 2004. Statistics reported by individual facilities in this table include "transfers" to other large state facilities (see table 1.26).

1989. Among discharges there has been a trend for persons with profound intellectual disability to make up a decreasing proportion: 49.1% in 1996, 40.8% in 2000, and 38.6% in 2004.

### **Previous Placement of New Admissions**

Table 1.24 summarizes the previous place of residence of persons admitted to large state facilities for the first time in FY 2004. Statistics are provided for FYs 1985, 1989, 1994, 1998, 2002 and 2004. As was evident in each of the years shown, a very frequent place of immediate prior residence for persons admitted to one large state facility was another large ID/DD facility of 16 or more residents (25.4% of 2004 new admissions). In 2004 the combined new admissions from psychiatric and correctional facilities made up 18.3% of all new admissions. Since 1987 this proportion has remained in the range of about 16% to about 29% of all new admissions.

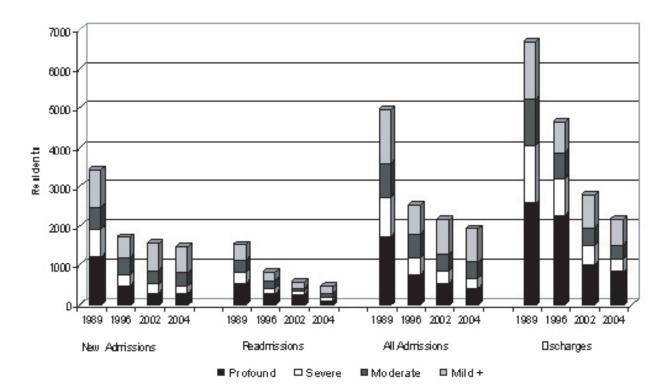

In 2004 the proportion of newly admitted persons coming directly from their family homes (21.7%) continued at a level that has been maintained for a decade, but substantially lower than in years before 1994 (e.g., 39.2% in 1985). A primary factor in this reduction has been the decrease of placements of children and youth in the large state facilities.

FY 2004 saw continuation of increasing rates of new admissions coming from community foster/host family homes, group homes or semi-independent and supported living settings (24.0% as compared with 21.7% in 2002, and 18.2% in 1996). It should be noted, however, that the actual numbers of people admitted from these community residential arrangements decreased between 1989 and 2004 as total admissions decreased.

### **Previous Placement of Readmissions**

Table 1.25 presents the previous place of residence of persons readmitted to large state facilities from 1985 to 2004. Persons readmitted to large state facilities in FY 2004 most frequently came from community residential settings (42.9%), including group homes with 15 or fewer residents (29.8%) foster or host homes (1.4%), semi-independent or supported living arrangements (10.7%) or board and care homes (1.0%). This was generally in line with previous years (40.5% in 2002, 41.8% in 1998, and 38.6% in 1994). About 14.3% of readmissions came from psychiatric and correctional facilities, generally consistant with previous years. Persons readmitted from the home of their parents or other relative was unusually low (9.5%) in 2004. This may in part be the product of the older ages of readmissions, but was otherwise unexpected.

New Residence of Discharged Residents. Table 1.26 shows the new place of residence of people leaving large state facilities in FY 2004, and, for comparative purposes, in FYs 1985, 1989, 1994, 1998, and 2002. In 2004, 63.6% of all persons discharged from large state facilities for whom subsequent placement was reported (i.e., excluding unknown) went to live in group homes, foster/host family homes, semi-independent supported living arrangements or board and care homes of 15 or fewer residents. This compares with 57.7% in 2002 and 69.5% in 1998. Another 9.5% of discharged residents whose placement was known went to the homes of family members. An estimated 18.5% of persons discharged from large state facilities went to other large state or non-state facilities of 16 or more residents. This was more than the 10.9% in

# Table 1.24 Previous Place of Residence of Persons Newly Admitted to LargeState Facilities in Fiscal Years 1985 through 2004

	Fiscal Years (%)

# Table 1.25 Previous Place of Residence of Persons Readmitted to Large StateFacilities in Fiscal Years 1985 through 2004

Note: Statistics on previous placements for readmissions in Fiscal Year 2004 are based on the reports of large state facilities reporting 462 of 521 (88.7%) all estimated readmissions.

2002, 11.1% in 1998, 16.4% in 1994, and 17.1% in 1985. Post discharge placement patterns were fairly stable between 1985 and 2004 in terms of proportional distributions. FY 2004 was notable in the substantial increase in the number of people leaving large state institutions only to go to other large public or private institutions. In FY 2004, an estimated 19.8% of persons discharged went to other large ID/ DD or psychiatric institutions, the largest proportion since 1989. In actual numbers, the estimated 1,612 discharges to community residential settings was less than the 1,762 discharges to community settings in 2002 and far less than the estimated 3,269 in 1989, 3,081 in 1994, and 2,177 in 1998.

Nursing home placements, an estimated 139 people in 2004 (adjusted for unknown), were substantially less than the 354 people in 1987, the year in which the OBRA nursing home reforms were enacted (see Section III for a description.) But in 2004, the proportion of all discharges going to nursing homes continued its steady increase above the 2.0% rate that was obtained in 1989 right after the passage of the OBRA 1987 nursing home reforms. Since 2000, the adjusted rates of nursing facility placements have been 3.5%(2000), 4.6% (2002), and 5.5% (2004), perhaps reflecting in part the aging population of large state facilities.

# Table 1.26 New Place of Residence of Persons Discharged from Large StateFacilities in Fiscal Years 1985 through 2004

	Fiscal Years (%)

Note: Statistics on new placements for people discharged in Fiscal Year 2004 are based on the reports of large state facilities reporting 2,242 (88.5%) of 2,534 total estimated discharges.

# Chapter 4

# Staffing Patterns, Characteristics and Outcomes in Large State Residential Facilities in 2004

### Sheryl A. Larson, Soo-Yong Byun, Kathryn Coucouvanis and Robert W. Prouty

This chapter summarizes statistics on staffing patterns, characteristics and outcomes of staffing in large state residential settings. The data were gathered in the survey of large state residential facilities in all states. A description of the state facility survey is provided in the "Methodology" section ("Individual Large State Facility Survey").

### Number of Full-Time Equivalent Staff Members in Various Positions

A total of 154 large public facilities reported their number of full-time equivalent staff members in each of several positions as of June 30, 2004. Table 1.27 provides a state-by-state breakdown by position. The facilities reported employing 586 full-time equivalent physicians, 7,637 nurses (e.g., registered nurses, licensed practical nurses), 2,017 teachers or teacher's aides, 965 psychologists, 811 occupational or physical therapists, 425 speech and language specialists or audiologists, and 2,387other licensed direct support providers. They also employed 50,311 direct support professionals (aides and technicians) who directly provided care, treatment or training services to residents. Finally, they employed 8,263 people who directly provided care, treatment or training services to residents but who were not direct support professionals (aides or technicians) nor were they licensed professionals (i.e., Qualified Mental Retardation Professionals). In addition to people who directly provided care, treatment or training services, these facilities employed 4,789 administrative or management employees and 19,855 support personnel including laundry, maintenance, dining, business office and similar positions.

The states employing the largest number of direct support professionals in aide/technician roles were Texas with 6,316; New Jersey with 3,671; North Carolina with 3,065; and Illinois with 2,882. The largest numbers of administrators or managers were employed in Texas (750), Virginia (475), and Illinois (310). The 154 facilities reporting data about the number of staff members by category housed 86% of residents of large state facilities. Table 1.27 presents the estimated U.S. totals based on the reporting facilities. Assuming the same staffing ratios in non-reporting facilities, it is estimated that state facilities in the United States employ a total of 58,818 direct support professionals (aides or technicians), 23,213 support personnel, 5,599 administrators and managers, 17,333 licensed direct support employees and 9,660 non-licensed employees in other direct support roles. It is estimated that large state residential facilities had 114,624 full-time equivalent positions on June 30, 2004, 5,378 more than 2002.

# Percent of Full-Time Equivalent Staff in Various Positions

Table 1.28 shows the proportion of staff in large state residential facilities in each of several different positions. Overall, the largest proportion of staff members were employed as direct support professionals (51.3% of all FTE employees). The next largest category was support personnel (20.3%). Other categories included physicians (0.6%), nurses (7.8%) teachers/teacher aides (2.1%), psychologists (1.0%), occupational or physical therapists (0.8%), speech and language specialists/audiologists (0.4%), other QMRP positions (2.4%), other care or treatment personnel (8.6%), and administrative/management personnel (4.9%).

There were substantial variations among states in the relative proportion of staff in various positions. The proportion of physicians ranged from 0.0% in Arizona, Minnesota, Nevada, and South Dakota to 1.7% in California. Nurses ranged from 3.3% of employees in South Dakota to 10% or more in five states (California, Georgia, Kentucky, Massachusetts, and Washington). The teacher/teacher aide category was not used at all by sixteen states. Arkansas reported a

Facilities not reporting numbers for all categories are not included on this table

high of 11.0% of its employees in this category. All of the reporting states employed psychologists. However, in 20 states, fewer than 1.0% of employees were in the psychologist category. Only Colorado (2.7%), Minnesota (2.2%), Mississippi (2.8%), and Nevada (2.1%) reported that more than 2.0% of employees were psychologists. The proportion of employees in the occupational or physical therapist category ranged from 0.0% (3 states) to 15.1% in Oregon. The proportion of employees who were speech or language specialists or audiologists ranged from 0% in Arizona to 1.8% in Colorado and 2.3% in Oregon. The proportion of employees who were other types of Qualified Mental Retardation Professionals ranged from 0.9% in Iowa and Oregon to 5.3% in South Dakota and 5.9% in Missouri.

The proportion of staff in the direct support professional (aides, technicians) category varied substantially by state ranging between 24.1% of all full-time equivalent employees in Wisconsin to 70.4% in New York. Ten states had less than 50% of their staff in aide or technician roles, 18 states had between 50% and 60%, and the rest had more than 61% of their staff contingent in those roles.

The proportion of administrative/ managerial staff ranged from 0.5% in Kansas to 14.8% in Nebraska. Michigan and Virginia also had more than 10% of the staff contingent in the administrative or management category. Finally, the proportion of the employees reported in the support personnel (not direct care) category ranged from 6.9% in Oregon to 49.6% in Wisconsin.

The distribution of staff by job roles was similar in 2004 to 2002. There were small increases in the proportions of direct support professionals (aides and technicians) and support personnel during this period.

#### Ratio of Staff to Residents

As Table 1.29 shows, the average large public residential facility employed 0.21 FTE nurses per resident, 1.40 FTE direct support professionals (aides and technicians) per resident, and 2.72 FTE total employees per resident. These ratios have been increasing steadily for many years. In 1989, the ratio of direct support professionals to residents was 0.96

NA = not applicable (state without large state facilities) DNF = did not furnish (Braddock & Mitchell, 1992). The ratio was 1.27 in 2000, 1.34 in 2002, and 1.40 in 2004.

The ratio of nurses to residents ranged from 0.08 in Arizona and South Dakota to 0.43 in Indiana. Thirteen states had nurse to resident ratios of less than 0.20 while seven states had ratios over 0.30. The ratio of direct support professionals (aides and technicians) to residents ranged from 0.85 in Wisconsin to 3.61 in New York. California (0.91), Ohio (0.93) and Wisconsin (0.85) had ratios less than 1.0 while Indiana (2.58), Minnesota (3.31), New York (3.61), Oregon (3.05) and Tennessee (2.60) had more than 2.5 direct support professionals (aides and technicians) per resident. The total number of full time equivalents per person served ranged from 1.69 in Ohio to 6.30 in Indiana. Seven states employed more than four FTE staff per resident (Indiana, Minnesota, New York, North Carolina, Oregon, Tennessee, and Wyoming) while two employed fewer than two per resident (Illinois and Ohio).

#### Personnel Costs in Large State Residential Settings

A total of 143 large state residential settings reported both their total operating budget and their personnel budget. Table 1.30 shows a state-by-state breakdown of the total operating budget for July 1, 2003 to June 30, 2004 (which includes personnel costs, and operating costs). The total budget for the 143 facilities that reported was \$4.839 billion in FY 2004. Of that, \$3.965 billion or 81.9% was spent on personnel costs (including fringe benefits). Capital expenses (e.g., remodeling, construction and repairs) were excluded from these analyses. The total estimated operating and personnel budgets for all 183 large state residential settings was \$5.857 billion including an estimated \$4.798 billion spent on personnel costs. Estimated operating and personnel costs were calculated based on the ratio of residents in 143 reporting facilities to all residents of all 183 facilities.

Personnel costs as a percent of all costs, ranged between 63.0% of all costs in Mississippi and 89.2% in New York. Four states reported total personnel costs below 70% of all costs (Colorado, Mississippi, Nevada and Tennessee). Twenty-seven states reported personnel costs averaging more than 80% of all costs.

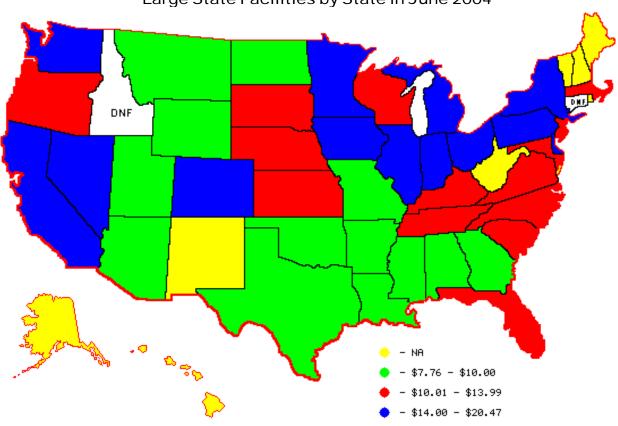

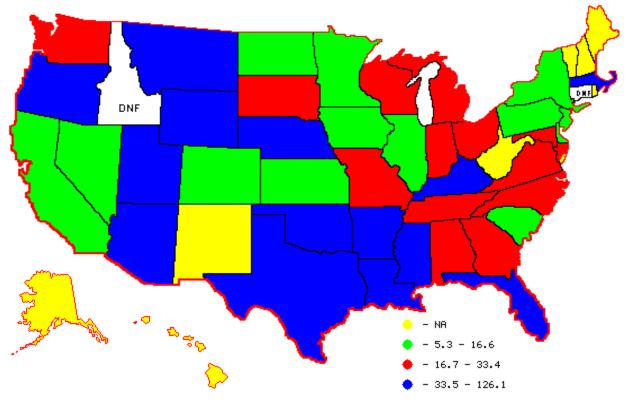

Figure 1.10 Average Wages for Direct Support Professionals in Large State Facilities by State in June 2004

Figure 1.11 Direct Support Professional Turnover Rates in Large State Facilities by State in FY 2004

#### Wages and Benefits

Table 1.31 shows state by state changes in wages and benefits for direct care staff (aides/technicians) from 2000 to 2004. The mean starting wage for direct care staff increased from \$9.19 in 2000 to \$9.69 in 2002 and \$10.12 in 2004. Between 2002 and 2004, direct care starting wages increased 5.2%. Between 2000 and 2004, direct care starting wages increased an average of 10.2%. Similar increases were seen for mean wages for direct care staff. Mean wages were \$10.81 in 1998, \$11.57 in 2000, \$12.33 in 2002 and \$12.53 in 2004. Between 2002 and 2004 mean wages for direct care staff increased 1.6%. Between 2000 and 2004, mean wages for direct care staff increased 8.3%.

In 2004, wages for direct support professionals varied widely across the states. Starting wages ranged from \$6.61 per hour in Louisiana to \$17.01 per hour in California. Average reported wages for direct support professionals ranged from \$7.76 per hour in Mississippi (\$16,141 per year for full-time employees) to \$20.05 per hour in California (\$41,704 per year for full-time employees). Starting wages were below \$7.00 per hour in two states (Louisiana and Wyoming) and above \$13.00 per hour in four states (California, Iowa, Michigan and Minnesota). Average wages were below \$9.00 per hour in Georgia, Louisiana, Mississippi, and Wyoming and above \$18.00 per hour in California.

The biggest changes in starting wage between 2002 and 2004 were in Indiana (24.8% increase) and Mississippi (11.6% increase). Only Arizona, Kentucky and Ohio saw decreases in the average starting wage. The biggest changes in average wage between 2002 and 2004 were in Pennsylvania (24.5% increase) and Wyoming (16.2% increase), California (17.0% decrease) and New York (14.0% decrease).

Figure 1.10 shows average wage for each state. The highest wages are in the darkest shade and were concentrated in the Midwest, Northeast and west coast states. The lowest wages are in the lightest shade and were found among mostly southern and Rocky Mountain states.

The number of hours direct support professionals had to work to be eligible for paid time off (e.g., sick, vacation, holiday) ranged from 1.0 to 40.0 hours per

week. The average nationally was 25.0 hours per week. A person employed halftime or less could earn paid leave in 16 states (down from 18 states in 2002).

#### **Turnover and Vacancy Rates**

Several different staffing outcomes were measured in the surveys of large public residential facilities. As Table 1.32 shows, in 2004 the average state facility reported direct support professional turnover rates of 28.5%. The average turnover rate has increased slightly from 27% in 2000, to 28% in 2002 and 28.5% in 2004. Turnover rates in 2004 ranged from 5.3% in Colorado to 126.1% in Kentucky. Kentucky (126.1%), Louisiana (53.7%) and Oregon (65.5%) reported the highest turnover rates in 2004. Colorado (5.3%), Iowa (9.6%), New York (9.8%) and Pennsylvania (9.8%) reported turnover rates of less than 10% per year for direct support professionals. Between 2002 and 2004, 16 states reported declines in their turnover rates for direct support professionals, while 21 states reported increases.

Figure 1.11 shows difference in turnover rates by state. The highest turnover rates could be seen in the South and in the Rocky Mountain states. The lowest turnover rates were observed in the Midwest, Southwest, and portions of the Northeastern United States.

At the time of this survey in 2004, vacancy rates for direct care positions averaged 5.8%. This was slightly higher than the 5.6% vacancy rate in 2002 but lower than the 7.7% vacancy rate in 2000. The lowest vacancy rates were reported in Alabama (with no vacancies at the time of the survey). The highest vacancy rates were in Delaware (21.3%), Kentucky (17.4%), Wyoming (14.9%) and Montana (13.6%).

#### Administrator Work Concerns

Administrators were given a list of common workforce concerns and asked to mark up to three as their biggest concern (See Table 1.33). Overall, the biggest concerns for administrators in 2004 were direct care staff turnover (reported by 54% of all administrators), finding qualified direct care staff (51%), direct care staff motivation (36%) and direct care wages and benefits (32%). Between 2002 and 2004 the proportion of administrators reporting concerns about finding qualified staff, direct care staff training and development, leaving by new employees within six months of hire, and morale declined. Concerns about staff motivation, wages and benefits, and coworkers getting along increased during the same period.

There were four items on which administrators in different geographic regions reported different levels of concern. On three of those items a follow-up test revealed the nature of those differences. Specifically, administrators in the West were much more concerned about finding qualified direct care staff than administrators in the other regions. Administrators in the Northeast were significantly more concerned about direct care staff training and development than were administrators in the South (54% vs. 20%). Finally, administrators in the South were significantly more concerned about direct care staff training and benefits than administrators in the other regions.

Table 1.34 Frontline Supervisor Staffing Outcomes in Large State Facilities by State on June 30, 2004

NA = not applicable (state without large state facilities)

DNF = did not furnish

#### Frontline Supervisor Characteristics

Frontline supervisors (FLS) are staff members whose primary job is to supervise direct support professionals (aides and technicians). On June 30, 2004, there were 5,486 frontline supervisors in the 146 facilities that reported this information. The average number of direct support professionals (aides and technicians) per frontline supervisor was 12.2.

Table 1.34 summarizes vacancy rates, turnover, and salaries for FLS positions in large state facilities. At the time of the 2004 survey, 6.6% of frontline supervisor positions were vacant. This is lower than the rate of 7.6% reported at the time of the 2002 survey. Vacancy rates for FLS ranged from 0% in Alabama, Colorado, Minnesota, Montana, Oregon, and Washington to 23.1% in Kentucky.

In 2004, the overall turnover rate for frontline supervisors was 17.5%. This is markedly higher than the 2002 rate of 12.5% and the 7.9% rate in 2000. Turnover rates for FLS ranged from 0% in Colorado, Montana and Oregon to 66.6% in Arkansas. Fourteen states reported turnover rates for FLS of under 10% while Arizona, Kentucky and Pennsylvania reported FLS turnover rates of 30% or higher. Overall, FLS turnover rates increased between 2002 and 2004 in twenty states.

In 2004 the average starting salary for a frontline supervisor in a large state residential facility was \$27,397 while the average salary was \$33,299. The average starting salary increased by \$228 between 2002 and 2004. However the average salary for all frontline supervisors actually declined from \$33,430 in 2002 to \$33,299 in 2004. The increase in turnover rates for supervisors could well be related to the stagnation of average wage for that job classification.

In 2004, average FLS starting salary ranged from \$18,988 in South Carolina to \$39,633 in California. Fifteen states reported starting salaries in the \$30,000 to \$40,000 range, while four states (Louisiana, Mississippi, North Dakota, and South Carolina) reported starting salaries of less than \$20,000 for this position. In 2004, average FLS salaries ranged from \$21,299 in Mississippi to \$57,002 in Minnesota. Average FLS salaries exceeded \$40,000 per year in California, Delaware, Illinois, Iowa, Maryland, Michigan, Minnesota, Nevada, Ohio, Oregon, and Washington.

#### Factors Associated with Turnover

Analyses of the characteristics of state residential facilities were conducted to identify factors associated with differences in turnover rates. Simple Pearson Correlation Coefficients were computed to analyze basic relationships between the outcomes of interest and the factors hypothesized to be associated with them. Then a multiple regression analysis was used to identify variables that accounted for differences between facilities in turnover rates. Several variables were created for these analyses. Case mix refers to a composite measure of intensity of supports. The people in each facility were given a score ranging from one to 15 on this scale. The level of intellectual disability was ranked on a 5- point scale (1 =no intellectual disability, 5 = profound intellectual disability). The average level of intellectual disability for all facilities was 4.1 (SD = 0.80). Challenging behavior was measured using two variables. People received 2.5 points for a diagnosis of mental illness, and 2.5 points for having a specific planned intervention for challenging behavior. The average score for all residents in the facilities on diagnosis of mental illness was 1.20 (SD = 0.60). The average score for challenging behavior was 1.30 (SD = 0.68). Finally, residents received one point for not being able to walk without assistance, dress without assistance, eat without assistance, for having more than one davtime toileting accident per month, and for not communicating by talking. The average number of adaptive skills for which residents needed assistance was 2.32 (SD = 1.11). These three average scores were summed to create a single case mix score for each facility. The scale for case mix has a theoretical range of 3 to 15 points per facility. The average facility had a case mix score of 8.89 (SD = 1.53). The range was from 2.13 to 12.18.

A second variable was created to measure the number of services provided by staff from each facility directly to persons who did not reside at the facility. Table 1.37 summarizes the services provided by staff directly to persons with ID/DD who reside in the community, and services that provide indirect supports to such persons through provision of training or technical assistance to community provider agencies. For this analysis, the number of services offered directly was used as a potential predictor of turnover. The final variable that requires explanation are the region designations. The regions were identified based on the U.S. Census Bureau designations. If the facility was in a specific region it was given a value of 1 for that region. For example, Georgia was coded 1 for the South region and 0 for the other three regions. If the facility was not in that region it was given a value of 0.

As Table 1.35 shows, six variables were significantly correlated with the turnover rates in large state facilities. Turnover was higher in facilities with higher vacancy rates for direct support professionals, was higher in facilities with higher vacancy rates for frontline supervisors, was higher in facilities with higher frontline supervisor turnover, was higher in facilities lower average wages for staff members, was higher in facilities in the South region, and was lower in facilities in the Northeast region.

As Table 1.36 shows, turnover of direct support employees was predicted in a multiple regression analysis by direct support vacancy rates and average wage for full time direct support professionals. Once those variables were considered region, per diem and frontline supervisor turnover did not significantly add to the model to predict DSP turnover. Altogether, the five variables tested accounted for an adjusted 30.5% of the variability in turnover rates among public residential facilities.

#### Table 1.35 Correlates of Direct Care Staff Turnover in Public Residential Facilities

## Community Services Provided By Public Residential Facilities

Large public residential facilities continue to provide an array of direct and indirect services to people with intellectual and developmental disabilities who do not live on the grounds of the institution. Table 1.37 summarizes the percent of public residential facilities offering each of the listed services. In 2004, the most frequently offered services provided directly to persons with ID/DD who lived in community settings were behavioral assessment and intervention (provided by staff from 40% of the reporting facilities), respite care (38%), dental services (34%), assistive technology assessment and intervention (30%) and crisis support services (30%).

As the capacity of community service providers to support individuals with intellectual and developmental disabilities has increased, the role of the institution in providing direct services to community residents has declined. In 2004, public residential facilities offered an average of 4.0 services directly as compared with 4.9 services in 2002 and 5.5 services in 2000. Twenty-one percent of the facilities did not offer any direct services to individuals not residing in the facility. The percent of facilities offering direct services to non-residents declined for all but one of the category of community services (assistive technology assessment and intervention).

Public residential facilities also offered training and technical assistance to community providers or residents in several areas. In 2004, the average facility offered training or technical assistance to non-residents in 2.5 areas. This is a decline from 3.6 areas in 2002 and 4.1 areas in 2000. The most common services provided indirectly by public residential facilities through training or technical assistance in 2002 were behavioral supports and intervention (offered by 33% of facilities), crisis supports and services (26%), and assistive technology assessment and intervention (22%). The proportion of facilities offering indirect services declined in all but two categories (dental services and sex education). The biggest declines were in behavioral assessment and intervention, assistive technology assessment and intervention, and consultant health services.

Note the category supportive services was dropped from the survey in 2004. In 2002 only 1% of facilities reported providing director indirect services in that category.

# Section 2

Status and Changes in Total State Residential Service Systems

# Chapter 5

## Services Provided by State and Nonstate Agencies in 2004

Kathryn Coucouvanis, Robert W. Prouty, and K. Charlie Lakin

This chapter provides statistics on all residential services that were directly provided or licensed by states for persons with intellectual disabilities and related developmental disabilities (ID/DD). These statistics are reported by state, operator (state or nonstate agency), and residential setting size as of June 30, 2004. Residential services data for 2004 are compared with similar statistics from June 30, 1977, 1982, 1987, 1992, 1997, 2002 and 2003. The statistics in this chapter do not include psychiatric facilities or nursing facilities, but do include residential services financed under the federal Medicaid program, most notably the Intermediate Care Facilities for Persons with Mental Retardation (ICFs-MR) and Home and Community Based Services (HCBS) programs. Statistics on psychiatric facility residents with ID/DD are reported in Chapter 1 and statistics on nursing facility residents with ID/DD are reported in Chapter 9. They are excluded here because of this chapter's focus on services provided within the designated ID/DD service systems of each state.

#### Number of Residential Settings

Table 2.1 presents statistics by state, operator, and size on the number of individual residential settings in which people received state licensed or state provided residential supports for persons with ID/DD on June 30, 2004. It excludes services provided to people living with their natural or adoptive families. Statistics on persons with ID/DD receiving services in their family home are provided in Chapter 6.

There were an estimated 148,520 distinct residential settings in which persons with ID/DD were receiving residential services on June 30, 2004. Of the total 148,520 residential settings, an estimated 145,967 (98.3%) were operated or supported by employees of nonstate agencies and 2,553 (1.7%) were operated or supported by state agencies. In all, an estimated 141,584 (95.3%) settings had 6 or fewer residents, 5,876 (4.0%) settings had 7 to 15 residents and 1,060 (0.7%) settings had 16 or more residents. Virtually all residential settings with 6 or fewer residents were operated or supported by nonstate agencies (98.9%), as were most of those with 7 to 15 persons (88.0%) and with 16 or more residents (78.4%).

## Number of Persons Receiving Residential Services

Table 2.2 presents statistics by state, operator, and setting size on the number of people with ID/DD receiving residential services on June 30, 2004. It excludes services provided to persons with ID/DD living with their natural or adoptive families (see Chapter 6).

On June 30, 2004 a total of 420,202 persons with ID/DD were receiving residential services sponsored by state ID/DD agencies. Of these, 366,199 (87.1%) were served by nonstate agencies. Virtually all of the estimated 294,996 persons in settings with 6 or fewer residents (98.1%) and an overwhelming majority of those in settings with 7 to 15 residents (87.9%) received services from nonstate agencies. In contrast, 60.2% of all persons in facilities with 16 or more residents were served by state agencies, even though 78.4% of facilities with 16 or more residents were operated by nonstate agencies.

California and New York had by far the largest numbers of persons receiving residential services (52,441 and 45,203 respectively). California, Illinois, and Texas reported the largest number of persons living in facilities of 16 or more residents (6,281, 6,959 and 6,855, respectively). Illinois had the largest number of persons living in large nonstate facilities (4,084 or 14.9% of the national total). California and New York reported the largest number of persons living in nonstate residential settings of 15 or fewer persons (46,160 and 34,248, respectively). California, Michigan, and New York had the largest number of persons living in nonstate residential settings of 6 or fewer persons (44,547, 19,445, and 20,628, respectively).

#### **Relative Size of Residential Settings**

Table 2.3 presents statistics summarizing the relative size of the residential settings for persons with ID/DD across the states. It shows the extreme variability among states on three measures of relative size of residential settings.

Average residential settings size. On June 30, 2004 there was an estimated average of 2.8 persons with ID/DD living in each "non-family" residential service setting for persons with ID/DD in the United States. The average number of persons with ID/DD per residential setting ranged from five or more in two states to two or fewer in nine states. Seventeen states were at or over the national average. Figure 2.1 shows changes in the average number of residents with ID/ DD per residential setting between 1977 and 2004.

**Percentage living in small residential settings.** Table 2.3 shows the percentage of all persons reported to be receiving residential services in each state on June 30, 2004 who were living in residential settings with 15 or fewer residents, with 6 or fewer residents, and with 3 or fewer residents. Nationally, an estimated 83.5% of reported residents lived in settings with 15 or fewer residents. In 39 states, 75.0% or more of all residential service recipients lived in places with 15 or fewer residents, while in only one state (Mississippi) did less than 50% of residential service recipients live in places with 15 or fewer residents live in settings of residential service recipients live in places with 15 or fewer residents with 15 or fewer residents. Nationally, on June 30, 2004, an estimated 70.2% of reported residents lived in settings with 6 or fewer residents, and an estimated 46.2%

Figure 2.1 Average Number of Persons with ID/DD per Residential Setting on June 30, 1977, 1982, 1987, 1992, 1997, and 2004

lived in settings with 1-3 residents. In 26 states more than 75.0% of all persons receiving residential services lived in settings with 6 or fewer residents. In four states, less than 50% of all residential service recipients lived in settings of 6 or fewer residents. (Figure 2.2 shows these variations on a state-by-state basis.)

Number of Residential Service Recipients Per 100,000 of General Population

Table 2.4 and Figure 2.3 present statistics on the number of persons with ID/DD receiving residential services per 100,000 of each state's general population on June 30, 2004. On June 30, 2004 there were a reported 143.1 persons with ID/DD receiving residential services per 100,000 of the U.S. population. Georgia had the lowest overall residential placement rate per 100,000 state citizens (56.7). North Dakota had the highest overall placement rate, with 305.8 persons receiving residential services per 100,000 of the state population. In all, 26 states reported placement rates below the national average, with four states (Alabama, Arizona, Georgia, and Nevada) reporting rates less than 50% of the national average. Of the 25 states at or above the national average, nine states (Idaho, Iowa, Maine, Michigan, Minnesota, New York, North Dakota, South Dakota and Wisconsin) reported rates greater than 150% of the national average. North Dakota and South Dakota had rates of more than 200% of the national average. While states varied substantially in the number of persons with ID/DD receiving residential services per 100,000 of the state's population, half of the states (25) fell within the range of the national average plus or minus one-third.

On June 30, 2004 there were an estimated 119.5 persons per 100,000 of the U.S. population receiving residential services in settings with 15 or fewer residents. A total of 12 states had placement rates that were more than 150% of this national average. Three states reported rates more than twice the national average (Maine, North Dakota and South Dakota). The estimated national average placement rate for settings with 6 or fewer residents was 100.5 residents per 100,000 of the general population. Two states reported rates more than twice the national average (Maine and Minnesota).

The national placement rate for facilities of 16 or more residents was 23.5 residents per 100,000 of the national population. Five states (Arkansas, Illinois, lowa, Louisiana, and Mississippi) reported a rate more than twice the national average. Figure 2.3 shows

#### Persons Presently Not Receiving Residential Services on Waiting Lists for Residential Services

Table 2.5 summarizes statistics reported by states on the actual or estimated number of people with intellectual disabilities and related developmental disabilities (ID/DD) not receiving residential services who were on waiting lists for such services on June 30, 2004. These statistics are presented as raw numbers and as percentages of the total number of all persons receiving and waiting for services. As shown, 36 states provided statistics on the number of persons waiting for residential services on June 30, 2004. Among these states a total of 69,250 persons were reported to be waiting for services. Estimates for the U.S. as a whole were made based on the same ratio of persons waiting for residential services to persons receiving residential services in the 15 states not reporting waiting list data as in reporting states. Florida was, however, excluded from this basis of estimate because of its usually large and disproportionate number of persons waiting for service. Based on reporting states on June 30, 2004, an estimated national total of 88,841 persons with ID/ DD were waiting for residential services.

Statistics from reporting states indicate that current residential services capacity would need to be expanded by an estimated 21.1% to create residential services for all the people presently on waiting lists for them. This does not include growth in specific types of services needed to serve persons wishing to move from one type of residential setting to another (e.g., a large facility to a community residence).

Six states (California, Hawaii, Idaho, North Dakota, Rhode Island and Vermont) reported having no persons with ID/DD who were not presently receiving services who were known to be waiting for residential services. In contrast, fourteen states reported waiting lists of such length that their residential services programs would need to be expanded by more than one-quarter to accommodate presently identified needs. # Chapter 6

# Number of Residential Settings and Residents by Type of Living Arrangement

Kathryn Coucouvanis, Robert W. Prouty, and K. Charlie Lakin

This chapter describes residential settings for persons with intellectual diasbilities and related developmental disabilities (ID/DD) by setting type. Four separate types of residential settings have been developed to conform to state ID/DD reporting systems. These include:

**Congregate Care:** A residence owned, rented, or managed by the residential services provider, or the provider's agent, to provide housing for persons with ID/DD in which staff provide care, instruction, supervision, and other support for residents with ID/DD (includes ICF-MR certified facilities).

**Host Family/Foster Care:** A home owned or rented by an individual or family in which they live and in which they provide care and support for one or more unrelated persons with ID/DD.

**Own Home:** A home owned or rented by one or more persons with ID/DD as their personal home in which personal assistance, instruction, supervision, and other support is provided to them as needed.

**Family Home:** A home owned or rented by a family member of a person with ID/DD in which the individual with ID/DD resides and in which the individual receives care, instruction, supervision and other support from persons other than family members and/or from family members who are paid.

#### Congregate Care Settings and Residents

Table 2.6 presents statistics on congregate care residential settings and persons with ID/DD living in these settings on June 30, 2004, by size and state, for all 50 states and the District of Columbia. Of the estimated total 49,182 congregate care residential settings, 47,965 (97.5%) had 15 or fewer residents and 40,972 (83.3%) had six or fewer residents. California (5,753), New York (5,389), and Pennsylvania (3,393) accounted for almost one-third (29.5%) of the total congregate care residences, while three states reported fewer than 100 such settings.

Of the estimated 269,351 residents of congregate care settings 201,421 (74.8%) lived in settings with 15 or fewer residents and 142,918 (53.1%) lived in settings with six or fewer residents. Seven of the reporting states, California (31,566), Illinois (16,753), Michigan (12,271) New York (33,909), Ohio (10,165), Pennsylvania (13,423), and Texas (15,467) accounted for 133,554 (49.6%) of the estimated total congregate care residents.

## Host Family/Foster Care Settings and Residents

Table 2.7 presents statistics on host family/foster care ("host family") settings and persons with ID/DD living in such settings on June 30, 2004, by size and state. One state had no host family settings. Forty-one states reported the number of host family settings by each size and forty-six reported the resident populations of each size. There were a reported U.S. total 14,646 host family settings and 39,857 residents. Based on the reporting states, it was estimated that there were a total of 24,786 host family settings in the United States.

Of the states reporting host family settings, only New Hampshire and New York reported settings of more than 6 individuals (a total of 3 settings combined). Of the 39,857 persons with ID/DD reported in host family settings, all but 19 lived in settings with six or fewer residents. Idaho (885), Massachusetts (1,000), New Hampshire (813), New York (1,916), Vermont (828) and Wisconsin (1,748) accounted for over one-fourth (29.0%) of the estimated total host family settings. Twelve states reported 100 or fewer host family settings.

Fourteen states (California, Idaho, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, North Carolina, Oregon, Pennsylvania, Texas, Vermont, and Wisconsin) accounted for al-

<sup>3</sup> estimate based on ratio of homes to residents in states reporting both total homes and total residents

most three-fourths (74.2%) of the estimated national total of 39,857 recipients of host family care. Eight of the states with host families reported fewer than 100 persons in host family settings.

#### **Own Home Settings and Residents**

Table 2.8 presents statistics on the number of homes owned or leased by persons with ID/DD who were receiving residential services and the number of persons with ID/DD living in their own homes on June 30, 2004 by size and state. Thirty-six states reported on June 30, 2004 that 28,691 houses and apartments were owned or rented by persons with ID/DD who received residential supports. The greatest number of homes owned or leased by persons with ID/DD in reporting states were reported in Missouri (2,262) and Wisconsin (5,254). From the ratio of homes to residents in the 36 states reporting both, it was estimated that nationally a total of 74,062 homes were owned or rented by residential service recipients with ID/DD.

States reported that a total of 107,157 persons lived in their own homes. California (16,784), Michigan (5,970), New York (7,711), Pennsylvania (4,996) and Wisconsin (5,254) reported more than one-third (38.0%) of the national total of 107,157 people living in their own homes. Two states (Delaware and District of Columbia) reported fewer than 25 own-home settings and fewer than 25 people living in their own home. The number of people living in homes that they own or rent increased to 107,157 from 90,597 in the previous year.

#### Family Home Settings and Residents

Table 2.9 presents statistics on persons with ID/DD receiving services while living in the home of a family member on June 30, 2004. States had an estimated total of 503,641 persons with ID/DD receiving services in their family home.

California and New York accounted for 43.6% of all "family support" recipients with 141,583 recipients and 78,056 recipients, respectively. In 23 states the number of people receiving services while living in their family home was equal to or greater than the number of people receiving "non-family" residential support. In four states (Alaska, Arizona, California and Idaho ) 70% or more of all service recipients received services while living in a family home. The estimated 503,641 persons receiving support in a family home on June 30, 2004 represented an increase from 500,004 on June 30, 2003.

## Changing Patterns in Residential Service Systems: 1977-2004

Robert W. Prouty, K. Charlie Lakin, and Robert Bruininks

**Changing Patterns in Residential Settings** 

Table 2.10 presents summary statistics on the number of residential settings in which services were provided to persons with intellectual disabilities and related developmental disabilities (ID/DD) by state licensed nonstate agencies on June 30th of 1977, 1982, 1987, 1992, 1997, 2002 and 2004. Totals are reported by type of operator (state or nonstate) and size of residential setting (6 or fewer residents, 7-15 residents, and 16 or more residents).

Between 1977 and 2004 the estimated total number of residential settings in which services to persons with ID/DD were provided increased from 11,008 to 148,520 (1,250%). All of this growth occurred in settings with 15 or fewer residents, with settings of 7-15 residents increasing by an estimated 144% (3,471 settings) and settings with 6 or fewer residents increasing by an estimated 1,952% (134,686 settings).

Of the estimated increase of 134,686 in residential settings with 6 or fewer residents between 1977 and 2004, 133,108 of these settings (98.8%) were supported by employees of nonstate agencies. The number of residential settings with 16 or more residents decreased by 645 (37.8%) between 1977 and 2004, with the number of large nonstate facilities declining by an estimated 547 (39.7%). The net increase in all nonstate residential settings (135,424) accounted for 98.5% of the overall increase in all residential settings. There was a decrease of 98 large (16 or more residents) state residential settings (30.0%), and an increase of 2,186 state community residential settings (15 or fewer residents) during the same period (1,584.1%).

Community settings of 15 or fewer residents increased by 1,485.1% to 147,460 total settings. Virtually all (97.5%) of the increase in the number of community settings (15 or fewer residents) occurred in settings with six or fewer residents.

Between 1977 and 2004 there was considerable stability in the proportions of residential settings operated by state and nonstate agencies. Between 1977 and 2004 the nonstate share of all community residential settings of 15 or fewer residents decreased slightly from 98.5% to 98.4%. During the same period the nonstate share of all large residential facilities decreased slightly from 80.8% to 78.4%. On June 30, 1977, 95.8% of all residential settings were nonstate operated; on June 30, 2004, 98.3% were nonstate operated.

The period between 1992 and 2004 brought the greatest annual growth in number of community residential settings ever recorded. Between 1992 and

Table 2.10 State and Nonstate Residential Settings for Persons with ID/DD on June 30 of 1977, 1982, 1987, 1992, 1997, 2002 and 2004

	Residential Settings											
	Nonstate				State				Total			
Year	1-6	7-15	16+	Total	1-6	7-15	16+	Total	1-6	7-15	16+	Total

1997	87,917	5,578	1,040	94,535	1,047	702	246	1,995	88,964	6,280	1,286	96,530
2002	116,189	5,880	1,026	123,095	1,634	713	233	2,580	117,823	6,593	1,259	125,675
2004	139,963	5,173	831	145,967	1,621	703	229	2,553	141,584	5,876	1,060	148,520

2004 the number of community residential settings increased by 99,624 (208.3%) or an estimated average of about 8,302 new settings per year. This included an annual average increase of 91 additional state community settings. As a point of comparison, between 1982 and 1992 total community settings increased at an annual average of 3,397 new settings per year and state community settings had an average increase of 63 facilities per year.

## Changes in Number of Residential Service Recipients

Table 2.11 presents summary statistics on the number of residents with ID/DD in residential settings served by state or nonstate agencies on June 30<sup>th</sup> of 1977, 1982, 1987, 1992, 1997, 2002 and 2004. Totals are reported by type of operator (state or nonstate) and size of residential setting ("community" settings with 1-6 and 7-15 residents; and "large" facilities with 16 or more residents).

Between 1977 and 2004 the total number of residents of state and nonstate settings in which residential services were provided to persons with ID/DD increased from 247,780 to an estimated 420,202, an increase of 172,422 (69.6%) residents over the 27 year period. All of this growth occurred in settings with 15 or fewer residents. Of the estimated 310,630 increase in residents of community residential settings between 1977 and 2004, 299,446 (96.4%) occurred in nonstate settings, 269,272 (89.9%) of which occurred in settings with 6 or fewer residents. The number of residents of large nonstate residential settings (16 or more residents) decreased by 25,223 (47.8%) between 1977 and 2004. There was, of course, a dramatic decrease in the number of people receiving residential services directly from state agencies, with a large decrease of 112,985 (73.1%) in the population of large state residential facilities and a much smaller increase of 11,184 (959.2%) residents of state community residential settings.

Between 1977 and 1982 the resident population of nonstate community settings increased at an average annual rate of 4,377 persons; between 1982 to 1992 the rate of population increase in nonstate community settings more than doubled to an average annual rate of 10,318 persons. Between 1992 and 2004 the average annual increase in nonstate community settings was 14,531 persons.

Between 1977 and 2004 the total population of large nonstate residential settings fluctuated consid-

erably. Between 1977 and 1982 it increased by 4,678 persons, followed by a decrease of 15,315 between 1982 and 1987. Between 1987 and 1992 there was an increase of 3,724 large nonstate residential facility residents as the OBRA 1987 nursing facility legislation (described in Chapter 6) caused many large private settings once operated outside the ID/DD system as nursing facilities to be converted to ICFs-MR within the ID/DD system. Between 1992 and 2004 the decrease of large nonstate facility residents was again evident with 18,310 fewer residents in 2004 than in 1992. Between 1977 and 2004 the proportion of all large facility residents living in nonstate facilities increased from 25.4% to 39.8%.

In summary, while the total population of all residential settings for persons with ID/DD increased by 69.6% between 1977 and 2004, the number of residents of large nonstate and large state residential facilities declined significantly (47.8% in nonstate facilities; 73.1% in state facilities; 66.7% in all large facilities). The total population of state and nonstate community residential settings increased dramatically (763% in nonstate settings; 959% in state settings; 768% in all settings). Small settings with 6 or fewer residents were most prominent in these increases. Residents of such settings increased more than fourteen-fold (about 274,596 individuals) between 1977 and 2004. During the most recent 7-year period, 1997-2004, these trends have continued with an increase of 100,028 (51.3%) people living in residential settings of 6 or fewer residents.

Figure 2.4 depicts graphically the residential service trends from 1977 to 2004 summarized in Table 2.11, with one change. This breakdown shows that the rapid growth from June 30, 1977 to June 30, 2004 in the number of people living in community residential settings of 15 or fewer residents came primarily from growth in number of persons in residential settings with 1-6 residents. This breakdown also clearly shows the significant decrease in the total population of large state and combined large state and nonstate residential facilities.

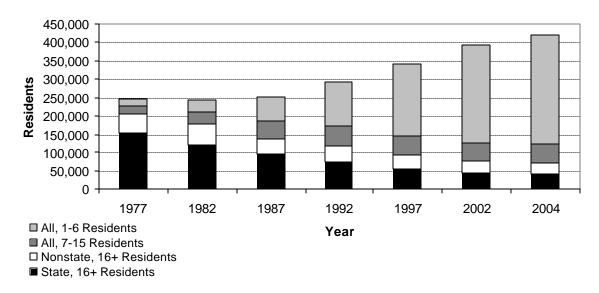

## Residential Settings, by Size, of Persons with ID/DD in 1982 and 2004

Figure 2.5 presents statistics on the number of persons with ID/DD receiving residential services, including nursing facility residents, by setting size in 1982 and 2004. Residential services for the 453,101 persons reported on June 30, 2004 provide a very

Data Points for Figure 2.5 Persons with ID/DD in Residential Settings of Different Sizes and Types on June 30, 1982 and June 30, 2004

Year	1-3 Residents	4-6 Residents	7-15 Residents	16+ Residents/ Nonstate	16+ Residents/ State	Nursing Facilities
1982	15,702	17,486	30,515	57,396	122,750	40,538
2004	193,931	101,065	56,058	27,495	41,653	32,899

different profile than those of the 284,387 persons with ID/DD reported on June 30, 1982.

In 1982, more than three-fifths (63.3%) of all residents lived in state and nonstate ID/DD settings of 16 or more persons, 68.1% of whom were in state facilities. An additional 14.3% were in generic nursing facilities. In total, in 1982 more than three-quarters (77.6%) of persons with ID/DD receiving long-term services and support received them in institutional (large ID/DD or nursing) facilities; only 11.7% lived in settings of 6 or fewer residents, with an additional

10.7% in settings of 7 to 15 residents.

By 2004, over three-fifths (65.1%) of all residents lived in ID/DD settings of 6 or fewer persons, with an additional 12.4% living in settings of 7 to 15 persons. Only an estimated 69,148 (15.3%) were in ID/DD settings of 16 or more residents, 60.2% of whom were in state facilities. Generic nursing facility residents with ID/DD were 7.3% of the estimated total population in June 2004. In total, in 2004 only 22.5% of persons with ID/DD receiving long-term services and support received them in institutional settings. Nevertheless this constituted about 102,047 institutionalized individuals.

# Section 3

Status and Changes in Medicaid Funded Residential and Related Services

# **Chapter 8**

## **Background and Summary of Medicaid Long-Term Care Programs**

This chapter provides a brief overview of Medicaid programs for persons with intellectual disabilities and related developmental disabilities (ID/DD) on which statistics are presented in Chapter 9.

#### **Establishment of the ICF-MR Program**

Before 1965 there was no federal participation in longterm care for persons with intellectual disabilities and related developmental disabilities. In 1965, Medicaid was enacted as Medical Assistance, Title XIX of the Social Security Act. It provided federal matching funds from 50% to 83%, depending on each state's per capita income, for medical assistance, including Skilled Nursing Facilities (SNFs), for people in the categories of elderly, blind, disabled, and dependent children and their families.

It was only shortly after the introduction of federal reimbursement for skilled nursing care in 1965 that government officials noted rapid growth in the number of patients in SNFs. It was further documented that many of these individuals were receiving far more medical care than they actually needed, at a greater cost than was needed, largely because of the incentives of placing people in facilities for which half or more of the costs were reimbursed through the federal Title XIX program. Therefore, in 1967, a less medically oriented and less expensive "Intermediate Care Facility" (ICF) program for elderly and disabled adults was authorized under Title XI of the Social Security Act.

In 1971 the SNF and ICF programs were combined under Title XIX. Within the legislation combining the two programs was a little noticed, scarcely debated amendment that for the first time authorized federal financial participation (FFP) for "intermediate care" provided in facilities specifically for people with ID/DD. Three primary outcomes of the new ICF-MR legislation appear to have been intended by proponents of this legislation: 1) to provide substantial federal incentives for upgrading the physical environment and the quality of care and habilitation being provided in large public ID/DD facilities; 2) to neutralize incentives for states to place persons with ID/DD in nonstate nursing homes and/or to certify their large state facilities as SNFs; and 3) to provide a program for care and habilitation ("active treatment") specifically focused on the needs of persons with ID/DD rather than upon medical care. It was also a way to enlist the federal government in assisting states with their rapidly increasing large state facility costs, which were averaging real dollar increases of 14% per year in the five years prior to the passage of the ICF-MR legislation (Greenberg, Lakin, Hill, Bruininks, & Hauber, 1985).

The ICF-MR program was initiated in a period of rapid change in residential care for persons with ID/ DD. By Fiscal Year 1973 state facility populations had already decreased to 173,775 from their high of 194,650 in Fiscal Year 1967 (Lakin, 1979). Nevertheless, states overwhelmingly opted to certify their public institutions to participate in the ICF-MR program, with two notable outcomes: 1) nearly every state took steps to secure federal participation in paving for large state facility services, and 2) in order to maintain federal participation, most states were compelled to invest substantial amounts of state dollars in bringing large state facilities into conformity with ICF-MR standards. Forty states had at least one ICF-MR certified state facility by June 30, 1977. Nearly a billion state dollars were invested in facility improvement efforts in Fiscal Years 1978-1980 alone, primarily to meet ICF-MR standards (Gettings & Mitchell, 1980).

In the context of growing support for community residential services, such statistics were used by a growing number of critics to charge that the ICF-MR program 1) had created direct incentives for maintaining people in large state facilities by providing federal contributions to the costs of those facilities; 2) had diverted funds that could otherwise have been spent on community program development into facility renovations solely to obtain FFP; 3) had promoted the development of large private ICF-MR facilities for people leaving large state facilities through available FFP (11,943 people were living in large private ICFs-MR by June 1977); and 4) had promoted organiza-

tional inefficiency and individual dependency by promoting a single uniform standard for care and oversight of ICF-MR residents irrespective of the nature and degree of their disabilities and/or their relative capacity for independence. These criticisms, and the growing desire to increase residential opportunities in community settings, along with the continued desire of states to avail themselves of the favorable Medicaid cost-share, helped stimulate the development of community ICFs-MR and the eventual clarification by the Health Care Financing Administration (HCFA) of how the ICF-MR level of care could be delivered in 4-15 person group homes.

#### **Community ICF-MR Group Homes**

Expansion of ICF-MR services to privately-operated programs in the late 1970s and the 1980s was a major development in the evolution of the program. Private residential facilities were not an issue at the time of original ICF-MR enactment in 1971, probably because: 1) most private facilities were already technically covered under the 1967 amendments to the Social Security Act authorizing private ICF programs, and 2) in 1971 large state facilities were by far the predominant model of residential care. Indeed, the 1969 Master Facility Inventory indicated a total population in nonstate ID/DD facilities of about 25,000, compared with a large state ID/DD facility population of 190,000 (Lakin, Bruininks, Doth, Hill, & Hauber, 1982).

Although Congressional debate about the ICF-MR program had focused on large public facilities, the statute did not specifically limit ICF-MR coverage either to large public facilities, or to "institutions" in the common meaning of the term. The definition of "institution" which served as the basis for participation in the ICF-MR program was (and remains) the one that also covered the general ICF institution: "four or more people in single or multiple units" (45 CFR Sec. 448.60 (6) (1)). Although it cannot be determined whether Congress, in authorizing a "four or more bed" facility, purposely intended the ICF-MR benefit to be available in small settings, it does seem reasonable to suppose, in the absence of specific limitations, that Congress was more interested in improving the general quality of residential care than it was in targeting specific types of residential settings. ICF-MR regulations, first published in January 1974, also supported the option of developing relatively small settings, delineating two categories of ICFs-MR, those housing

16 or more people ("large") and those housing 15 or fewer people ("community") and providing several specifications that allowed greater flexibility in meeting ICF-MR standards in the smaller settings.

Despite the regulatory recognition of community ICFs-MR, the numbers of such ICFs-MR actually developed varied enormously among states and regions. In some DHHS regions (e.g., Region V) hundreds of community ICFs-MR were developed while other regions (e.g., II and X) had none. By mid-1977 three-quarters (74.5%) of the 188 community ICFs-MR were located in just two states (Minnesota and Texas), and by mid-1982 nearly half (46.4%) of the 1.202 community ICFs-MR were located in Minnesota and New York and nearly two-thirds (65.1%) were located in Minnesota, New York, Michigan and Texas. These variations reflected what some states and national organizations considered a failure of HCFA to delineate clear and consistent policy guidelines for certifying community settings for ICF-MR participation and/or reluctance on the part of some regional HCFA agencies to promote the option.

In response to continued complaints from the states that there was a need to clarify policy regarding the certification of community ICFs-MR, in 1981 HCFA issued "Interpretive Guidelines" for certifying community ICFs-MR. These guidelines did not change the existing standards for the ICF-MR program, but clarified how the existing standards could be applied to delivering the ICF-MR level of care in community settings with 4 to 15 residents. The publication of the 1981 guidelines was followed by substantially greater numbers of states exercising the option to develop community ICFs-MR. Ironically, these guidelines were published in the same year (1981) that Congress enacted legislation that would give even greater opportunity and flexibility to states to use Medicaid funding for community services through the Medicaid Home and Community Based Services waiver authority (Section 2176 of P.L. 97-35).

## Home and Community Based Services (HCBS)

Section 2176 of the Omnibus Budget Reconciliation Act of 1981 (P.L. 97-35), passed on August 13, 1981, granted the Secretary of Health and Human Services the authority to waive certain existing Medicaid requirements and allow states to finance "noninstitutional" services for Medicaid-eligible individuals. The Medicaid Home and Community-Based Services (HCBS) waiver program was designed to provide noninstitutional, community services to people who are aged, blind, disabled, or who have ID/DD and who, in the absence of alternative noninstitutional services, would remain in or would be at a risk of being placed in a Medicaid facility (i.e., a Nursing Facility or an ICF-MR). Final regulations were published in March 1985 and since then a number of new regulations and interpretations have been developed, although none have changed the fundamental premise of the program, that of using community services to reduce the need for institutional services.

A wide variety of noninstitutional services are provided in state HCBS programs, most frequently these include service coordination/case management; inhome supports; vocational and day habilitation services; and respite care. Although not allowed to use HCBS reimbursements to pay for room and board, all states provide residential support services under categories such as personal care, residential habilitation, and in-home supports. HCBS recipients with ID/DD use their own resources, usually cash assistance from other Social Security Act programs and state supplements to cover room and board costs. In June 2004 about 56.6% of HCBS recipients in the states reporting such data received services in settings other than the home of natural or adoptive family members.

Given both its flexibility and its potential for promoting individualization of services, the HCBS program is recognized in all states as a significant resource in the provision of community services as an alternative to institutional care. Beginning in the early 1990s, stringent standards that previously required states to demonstrate reductions in projected ICF-MR residents and expenditures roughly equal to the increases in HCBS participants and expenditures were considerably relaxed and then dropped in the 1994 revision of the HCBS regulations. As a result, from 1992 to 2004 there was dramatic growth (581%) in the number of HCBS participants, even as the number of ICF-MR residents declined by 28.6%. All states now provide HCBS and more than four times as many persons with ID/DD (424,855) participate in the HCBS program as live in ICFs-MR (104,526).

#### **Medicaid Nursing Facilities**

Almost from the inception of Medicaid, states noted incentives for placing persons with ID/DD in Medicaid certified nursing facilities. Almost as soon as this began to happen, there was a sense among the advocacy community that many more people with ID/ DD were living in nursing homes than were appropriately served in them (National Association for Retarded Citizens, 1975). In 1987 Congress responded to these and other criticisms of nursing facility care in the Omnibus Budget Reconciliation Act (OBRA) of 1987 (P.L. 100-203). Provisions of this legislation restricted criteria for admissions to Medicaid reimbursed nursing facilities, so that only those persons requiring the medical/nursing services offered would be admitted. Current residents not in need of nursing services were required to be moved to "more appropriate" residential settings, with the exception of individuals living in a specific nursing home for more than 30 months should they choose to stay. In either case nursing facilities were required to assure that each person's needs for "active treatment" (later termed "specialized services") were met. The estimated number of people with ID/DD in Medicaid-certified nursing facilities in June 2004 (32,899), was based on direct reports from 50 states. The estimated number of nursing facility residents with ID/DD in June 2004 was 13.4% less than the number in 1970 (38,000), the year before the ICF-MR program began and 16.7% less than in 1986 (39,528), the year before OBRA 1987 reform was enacted.

# **Chapter 9**

### Utilization of and Expenditures for Medicaid Institutional and Home and Community Based Services

#### K. Charlie Lakin, Kathryn Coucouvanis, and Robert W. Prouty

This chapter provides statistics on the utilization of the three primary Medicaid long-term care programs for persons with intellectual disabilities and related developmental disabilities (ID/DD): Intermediate Care Facilities for (persons with) Mental Retardation (ICF-MR), Home and Community Based Services (HCBS), and Nursing Facilities (NF). These statistics are reported on a state-by-state basis, reflecting the independent state administration and the substantial variability among states in the use of these programs.

### ICF-MR Program Utilization on June 30, 2004

**Number of facilities**. Table 3.1 presents state-bystate statistics on the number of ICFs-MR in the United States by size and state/nonstate operation on June 30, 2004. The total of 6,535 ICFs-MR on June 30, 2004 compares with 574 ICFs-MR reported on June 30, 1977; 1,889 on June 30, 1982; 3,913 on June 30, 1987; 6,512 on June 30, 1992; 7,249 on June 30, 1997; 6,623 on June 30, 2002 and 6,645 on June 30, 2003.

The period between June 1993 and June 1995 provided the first ever decrease in the total number of ICFs-MR. Between June 1993 and June 1995 there was a substantial reduction of 664 from the 1993 total of 7,611. The major contributor to this reduction was New York which was operating 526 fewer ICFs-MR in 1994 than 1993, and 515 fewer in June 1995 than in 1994, due to the conversion of community ICFs-MR (with 15 or fewer residents) to settings financed by the Medicaid Home and Community Based Services (HCBS) waiver. Between 1995 and 2004, the total number of ICFs-MR has been somewhat variable: increasing by 136 settings between 1995 and 1996 (112 of which served 6 or fewer residents), and by 166 settings between 1996 and 1997 (again mostly settings with 6 or fewer residents). Between 1997 and 1998 ICFs-MR decreased by 133 settings, and then by another 363 settings between 1998 and 1999 due to Michigan's conversion of 436 nonstate ICFs-MR of 6 or fewer residents to HCBS sites. Between 2001 and 2002 the number of ICFs-MR increased by 8 settings and by 22 between 2002 and 2003. The number decreased by 110 between 2003 and 2004.

Over five-sixths (85.9%) of the 6,645 ICFs-MR on June 30, 2004 were in the 13 states with 100 or more ICFs-MR each. Of these, almost three-fifths (59.5%) were concentrated in four states (California, Indiana, New York, and Texas) with more than 500 ICFs-MR each. In contrast, 17 states with ICFs-MR had fewer than 10 each and their combined total of 62 was just 1% of all ICFs-MR. Alaska had no ICFs-MR.

The vast majority of all ICFs-MR (89.8%) on June 30, 2004 were community settings (15 or fewer residents), of which more than three-fifths (61.9%) had six or fewer residents. Most (81.8%) of all ICFs-MR with six or fewer residents were in seven states (California, Indiana, Louisiana, Minnesota, North Carolina, Pennsylvania, and Texas) with more than 100 ICFs-MR each. Nineteen states reported no ICFs-MR with six or fewer residents and twelve states reported no community ICFs-MR of any size.

Five states (Alaska, District of Columbia, Hawaii, New Mexico and Vermont) reported having no large ICFs-MR (16 or more residents) on June 30, 2004. Twenty-five other states reported having five or fewer large ICFs-MR. Over two-fifths (43.0%) of all large ICFs-MR were located in four states with 50 or more large ICFs-MR each (Florida, Illinois, New York, and Ohio) and almost two-thirds (58.2%) were in the seven states with 30 or more large ICFs-MR each.

Most large ICFs-MR (66.8%) were operated by nonstate agencies. Almost all ICFs-MR (99.2%) with six or fewer residents were nonstate operated, as were almost all ICFs-MR (96.1%) of 7 to 15 residents. Of the total 6,535 ICFs-MR reported on June 30, 2004, 6,197 (94.8%) were operated by nonstate agencies.

Table 3.1 ICF-MR Certified Settings by State and Size on June 30, 2004

Number of residents. Table 3.2 presents state-bystate statistics on the number of people residing in ICFs-MR of different sizes and state/nonstate operation on June 30, 2004. There was a total of 104,526 ICF-MR residents on June 30, 2004. This represented the eleventh consecutive year of decrease in ICF-MR populations. The decrease of 2,539 residents in ICF-MR populations between June 2003 and June 2004 was less than the annual decreases between 2002 and 2003 (3,507) and 2001 and 2002 (3,335). It was somewhat less than the average annual decrease of 3,110 between June 1996 and June 2001, and substantially less than the average annual decrease of 5,784 between June 1993 and June 1996. Forty-one states reported reduction in their total population of ICF-MR residents between June 30, 2003 and June 30, 2004. The largest reduction was in North Carolina in which there were 625 fewer ICF-MR residents on June 30, 2004 than on June 30, 2003. In June 2004 the largest numbers of ICF-MR residents were in Texas (12,300), California (10,585), Illinois (9,723) and New York (9,220). Alaska had none, and New Hampshire and Vermont each had fewer than 50.

#### **Nonstate ICFs-MR**

Throughout the period from 1977 to 2004, there has been a steady and substantial shift toward nonstate operation of ICFs-MR, although significantly less than the shift toward nonstate residential services generally. In 1977 there were 13,312 nonstate ICF-MR residents. They made up only 12.5% of all ICF-MR residents. In 1987, the 53,052 nonstate ICF-MR residents were 36.8% of all ICF-MR residents and by June 30, 1995, a majority (73,437 or 54.6%) of all ICF-MR residents were in nonstate ICFs-MR. On June 30, 2004, there were 62,515 residents of nonstate ICFs-MR and they made up 59.8% of all ICF-MR residents, almost the same percentage as in June 2003.

Large nonstate ICFs-MR. Most of the growth in the number of residents in large nonstate ICFs- MR took place in the decade between program inception and 1982. There were 23,686 residents of large nonstate ICF-MR facilities on June 30, 1982, 11,728 more than on June 30, 1977. The ICF-MR certification of large nonstate facilities continued at a generally high rate until 1987, when there were 32,398 residents. Between 1987 and 2004, large nonstate ICF-MR populations decreased by 9,632 residents (an average of 567 per year) to 22,766 persons with ID/DD on June 30, 2004.

Nonstate community ICFs-MR. On June 30, 2004 nonstate community ICFs-MR (15 or fewer residents)

made up 88.0% of all ICFs-MR, although only 38.0% of all ICF-MR residents lived in them. These numbers compare with 26.0% of ICF-MR certified settings and 1.3% of residents in 1977; 56.0% of settings and 6.0% of residents in 1982; 70.3% of settings and 14.3% of residents in 1987; 73.5% of settings and 23.9% of residents in 1992; 87.3% of settings and 34.6% of residents in 2002 and 87.7% of settings and 37.2% of residents in 2003. Between 1982 and 2004, nonstate community ICFs-MR grew by 30,391 residents as compared with a decrease of 920 residents in large nonstate ICFs-MR.

Further broken down, on June 30, 2004 of the 39,749 people living in nonstate community ICFs-MR, 47.9% (19,033) were living in ICFs-MR of six or fewer residents. In comparison, on June 30, 1982, 28.3% (2,364) of the 8,358 community nonstate ICF-MR residents, were living in ICFs-MR of six or fewer residents.

On June 30, 2004 the ten states with the greatest number of nonstate community ICF-MR residents (California, Illinois, Indiana, Louisiana, Minnesota, New York, North Carolina, Ohio, Pennsylvania and Texas) had 83.9% of all nonstate community ICF-MR residents. California, New York and Texas each had more than 5,000 residents in nonstate community ICFs-MR. In contrast, the 10 states with the smallest resident populations had a total of only 1.0% of all residents on June 30, 2004. Sixteen states had no nonstate community ICFs-MR.

#### **State ICF-MR Utilization**

The proportion of ICF-MR residents living in state facilities has been decreasing steadily since 1982. FY 2004 was the twelfth year that fewer ICF-MR residents lived in state settings than in nonstate settings (40.2% of all ICF-MR residents on June 30, 2004).

Large state ICFs-MR. Nationally on June 30, 2004, the population of large state ICFs-MR was 41,068 (out of a total residential population of all large state institutions of 42,059). Although the percentage of large state ID/DD facility residents living in ICF-MR certified units increased from 88% to 98.6% between 1982 and 2004, there was a large overall reduction in the population of large state ICFs-MR. From June 30, 1982 to June 30, 2004 there was a national net decrease of 66,013 residents of large state ICFs-MR, as compared with a net increase of 14,583 residents between June 30, 1977 and June 30, 1982.

Two major factors affected the rather notable change from an average increase of about 2,917 per

Table 3.2 Persons with ID/DD Living In ICF-MR Certified Settings by State and Size on June 30, 2004

year in the number of ICF-MR recipients living in large state facilities between 1977 and 1982 to an average decrease of about 3,001 per year between 1982 and 2004. Between June 30, 1977 and June 30, 1982 states were increasing the proportion of their large state ID/ DD facility capacity certified to participate in the ICF-MR program from about 60% of the national total to about 88%. Therefore, although states were decreasing large state ID/DD facility populations over the period by about a quarter, the number of newly certified facilities led to an overall increase in persons living in ICF-MR certified units.

By 1982, with 88% of large state ID/DD facility residents already living in units with ICF-MR certification, the ongoing depopulation of these facilities caused substantial decreases in the number of residents in ICF-MR units. The decreasing populations in large state ID/DD facilities continues to reduce the extent to which the ICF-MR program is essentially a large state ID/DD facility-centered program. In 2004, 39.3% of ICF-MR residents lived in large state ID/DD facilities. This compares with 87.1% in 1977; 76.3% in 1982; 61.3% in 1987; 48.7% in 1992; and 42.1% in 1997, 39.4% in 2002 and 39.4% in 2003.

State community ICFs-MR. On June 30, 2004 there were only 117 state community ICFs-MR still operating in the United States and only 943 (0.9%) of all ICF-MR residents lived in these settings. This compares with 742 state community ICFs-MR and 6,526 residents in June 1993. The dramatic decrease in the number of people living in state community ICFs-MR began in FYs 1994 and 1995 as New York reduced the number of persons living in state community ICFs-MR from 5,227 in June 1993 to 136. These changes reflected little change in place of residence, but simple conversion of state community ICFs-MR to group homes financed through the Medicaid Home and Community Based Services waiver. In FY 2004, more than three-fifths of the dwindling population of state community ICFs-MR lived in one state. Of the total 943 residents of state community ICFs-MR in June 2004, 603 (63.9%) lived in Mississippi.

Figure 3.1 shows ICF-MR residents as a proportion of all persons receiving residential services in state and nonstate settings of different sizes on June 30,

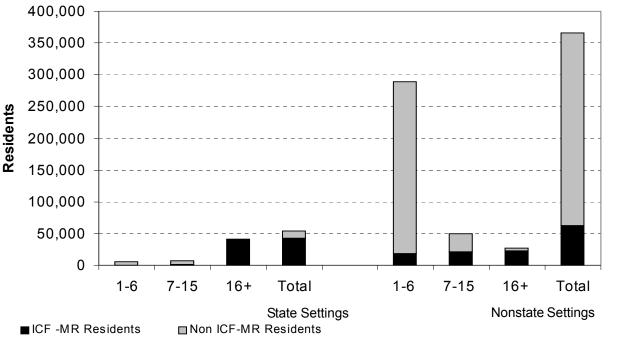

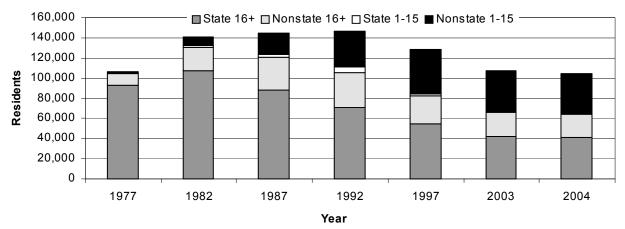

Figure 3.1 ICF-MR Residents as a Proportion of all Residents of State and Nonstate Settings by Size on June 30, 2004

Data Points for Figure 3.1: ICF-MR Residents as a Proportion of All Residents of State and Nonstate Settings by Size on June 30, 2004

## Figure 3.2 Residents of ICFs-MR by Size and State/Nonstate Operation on June 30, 1977, 1982, 1987, 1992, 1997, 2003 and 2004

Data Points for Figure 3.2: Residents of ICFs-MR by Size and State/Nonstate Operation on June 30, 1977, 1982, 1987, 1992, 1997, 2003 and 2004

	Sta	ate Settings		Non	state Settings	
Year	1-15 Residents	16+ Residents	Total	1-15 Residents	16+ Residents	Total
1977	356	92,498	92,854	1,354	11,958	13,312
1982	1,627	107,081	108,708	8,358	23,686	32,044
1987	2,874	88,424	91,298	20,654	32,398	53,052
1992	6,366	71,279	77,645	34,908	33,707	68,615
1997	1,264	54,636	54,636	43,880	28,181	72,061
2003	929	42,226	43,155	39,850	24,060	63,910
2004	943	41,068	42,011	39,749	22,766	62,515

2004. As shown, 98.6% of large state ID/DD facility residents lived in ICF-MR units, as did 82.0% of large nonstate facility residents (a combined total of 92.3%). Nationally, 42.1% of the people living in nonstate settings of 7 to 15 residents, and 6.6% of the people living in nonstate settings of six or fewer residents resided in ICFs-MR. About 7.6% of state community setting residents lived in ICFs-MR.

Figure 3.2 shows the proportion of all ICF-MR residents living in each of the four types of ICFs-MR described above from 1982 to 2004. It shows the substantial proportional growth in the number of residents in ICFs-MR other than large residential facilities, but also that large state residential facilities remain the single most frequently used setting for ICF-MR services (with 41,068 residents, barely more than the 39,749 persons living in nonstate settings with 15 or fewer residents).

#### Large and Community ICFs-MR

Table 3.3 reports the total number of persons with ID/ DD who live in large (16 or more residents) and community (15 or fewer residents) ICFs-MR, the number who live in all ICF/MR and non-ICF-MR residential settings for persons with ID/DD (420,202 residents), and the percentages of all residents of large and community residential settings who were living in places with ICF-MR certification on June 30, 2004.

A total of 40,692 persons were reported living in community ICFs-MR nationwide on June 30, 2004 (38.9% of all ICF-MR residents). However, states varied greatly in their particular use of large and community ICFs-MR. Use of community ICFs-MR on June 30, 2004 was dominated by seven states (California, Illinois, Indiana, Louisiana, New York, Ohio and Texas), each having more than 2,000 residents. Together they served 72.5% of all community ICF-MR residents. Thirteen states had at least 50% of their total ICF-MR population in community settings, while eleven other states participating in the ICF-MR program had no residents in community ICFs-MR.

The "All Residents" columns of Table 3.3 present statistics on combined ICF-MR and non-ICF-MR (state and nonstate) residential services. It shows that nationally on June 30, 2004, more than four-fifths (83.5%) of persons in all state and nonstate ICF-MR

Table 3.3 Number and Percentage of Residents in ICF-MR Settings by State and Size on June 30, 2004

93

and non-ICF-MR residential programs were in settings with 15 or fewer residents.

The "Percentage in ICF-MR" columns of Table 3.3 indicate the percentage of all ID/DD residential service recipients who were living in ICFs-MR by size of residential setting. It shows that 24.9% of all residential service recipients nationally were in ICFs-MR, but that only 11.6% of all people living in community residential settings were ICF-MR residents. In contrast, 92.3% of residents of large residential facilities lived in ICF-MR certified units.

Figure 3.3 shows variations in utilization of ICF-MR services on a state-by-state basis. A total of three states reported more than 60% of their total residential populations living in ICFs-MR on June 30, 2004. Twenty-six states reported less than 20% of their residents in ICF-MR certified settings.

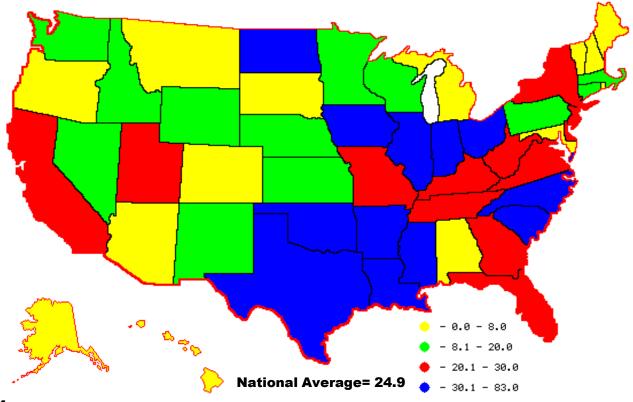

Figure 3.4 shows the number of people living in ICF-MR and non-ICF-MR residential settings of 1-15 and 16 or more total residents on June 30, 1977, 1982, 1987, 1992, 1997, 2002 and 2004. It shows the decreasing role of ICFs-MR in residential services and the overall growth in the number of people living in community residential settings, both ICF-MR and non-ICF-MR.

In 1977, only 4.2% (1,710) of the total 40,400 persons in community residential settings were in ICFs-MR; in 1982, 15.7% (9,985) of 63,700 persons in community residential settings; in 1987, 19.8% (23,528) of 118,570 residents; and at the highest point ever, in 1992, a quarter (25.1%), or 48,669 of 193,747 total community setting residents, were living in ICFs-MR. Since then, with greatly accelerated use of the Medicaid HCBS option, ICF-MR certification of community residential settings decreased substantially. In 2004 the 40,692 community ICF-MR residents were only 11.6% of all community residents, a decrease from 18.1% in 1997.

The expanded use of the HCBS option is reflected in the rapid growth in the non-ICF-MR residential services since 1992. From the 103,000 persons in residential settings without ICF-MR certification in 1982, at the end of the first year of the HCBS program, persons living in non-certified settings grew to 111,353 in 1987 and to 147,655 in 1992, before increasing dramatically to 248,882 in 1997 and to 316,676 persons in 2004.

Between 1992 and 2004 total HCBS participants with ID/DD grew by 545%. On June 30, 2004 an estimated 240,468 individuals with ID/DD were receiving

Figure 3.3 Percentage of All Residential Service Recipients in ICFs-MR on June 30, 2004

HCBS financed residential services outside their natural or adoptive family home (see Table 3.12). In June 2004, therefore, an estimated 69.7% of the 344,994 persons with ID/DD who were living outside their family home and who were receiving residential services financed by either ICF-MR or HCBS programs, had those services financed through HCBS. Since 1982, the number of people receiving services outside their family home financed by neither the ICF-MR program nor its HCBS alternative actually decreased by about 26,579 to an estimated 75,207 persons (or about 17.9% of residential service recipients).

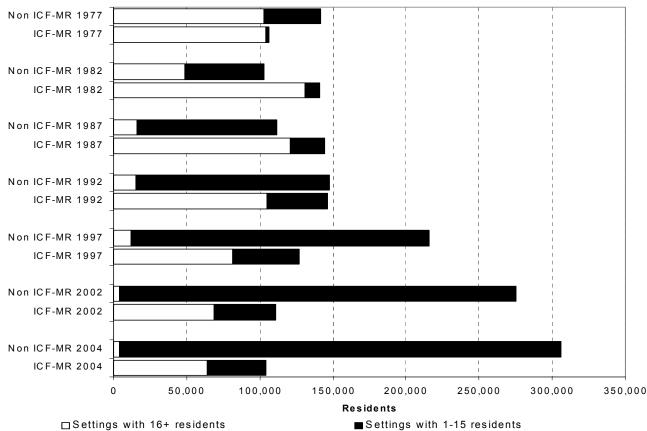

#### **Expenditures for ICF-MR Services**

Table 3.4 shows national totals and interstate variations in ICF-MR program recipients and expenditures for FY 2004. Since 1993, national expenditures for ICFs-MR have increased from \$9.2 billion in FY 1993 to \$11.9 billion dollars in FY 2004. In 2004, reported ICF-MR expenditures increased from the previous year by 3.5%. It is notable, however, that while total ICF-MR expenditures increased by 29.3% between FY 1993 and FY 2004, the number of ICF-MR residents decreased by 29.7% between June 30, 1993 and June 30, 2004 (from 148,729 to 104,526). As a result average ICF-MR expenditures per average daily ICF-MR resident increased between June 30, 1993 and June 30, 2004 from \$62,491 to \$112,762 or an average increase of 7.3% per person per year.

Total ICF-MR expenditures of \$11.9 billion dollars in FY 2004 compare with \$1.1 billion in FY 1977, \$3.6 billion in FY 1982, \$5.6 billion in FY 1987, \$8.8 billion in FY 1992, \$10.0 billion in FY 1997, \$10.7 billion in FY 2002 and \$11.5 billion in FY 2003. Before 1982 ICF-MR program expenditures were pushed upward by both increased numbers of recipients and increased expenditures per recipient. Since 1982 growing expenditures per recipient have been the only significant factor in the increasing expenditures for providing ICF-MR services. Between June 30, 1982 and June 30, 2004, average per person ICF-MR expenditures have increased by a compounded average of 7.4% per year.

In addition to the changing patterns in overall expenditures, there has also been a substantial reduction in the past decade in the per resident rate of increase in expenditures for ICF-MR care. While per

# Table 3.4 Summary Statistics on ICF-MR Expenditures for Persons with ID/DDby State for Fiscal Year 2004

NA = not applicable

<sup>2</sup>estimate based on FY03 costs and FY04 residents

compared to other periods. For the most part, attention now given to Medicaid services by federal and state policy makers is directed toward issues of systemwide expenditures, guality, and equity of access. States have much more attended to the rapidly growing HCBS alternative as the program focus of these considerations. However, cost management in ICF-MR services remains a major concern in a number of states, and opportunities to reallocate ICF-MR expenditures to more flexible and less costly HCBS and similar services have been of growing interest to states. Between 1992 and 2004 that interest was expressed in efforts to depopulate and close ICFs-MR, in efforts to simply "decertify" community ICFs-MR to finance them under HCBS, and in the explosive growth in HCBS enrollments (581% increase) as ICF-MR populations decreased by 25.6%.

#### Interstate Variations in ICF-MR Expenditures

There are major differences between states in their expenditures for ICF-MR services. The variability in state ICF-MR expenditures, and federal contributions to those expenditures, is by no means predictable solely by general factors such as total ICF-MR residents or state size. Table 3.4 presents FY 2004 statistics for ICF-MR expenditures across the states. It shows total expenditures, federal expenditures, per recipient average annual expenditures, per capita annual ICF-MR expenditures (ICF-MR expenditures per resident of the state), and each state's proportion of the total federal ICF-MR expenditures.

Per capita cost variations. One indicator of the variation among states in ICF-MR expenditures is the average expenditure for ICF-MR services per resident of the state. Table 3.4 shows the great variation in these expenditures among the states. While nationally in FY 2004 the average daily expenditure for ICF-MR services was \$40.62 per U.S. resident, the average varied from well over three times the national average in the District of Columbia and New York to less than one-third the national average in twelve states with ICFs-MR (Alabama, Arizona, Colorado, Hawaii, Maryland, Michigan, Nevada, New Hampshire, New Mexico, Oregon, Rhode Island and Vermont). The variability in total and per resident expenditures among states is affected by two major factors: the number of people living in ICFs-MR and the amount spent per resident.

Variations due to disproportionate placements. Variations in ICF-MR utilization rates across states have a direct effect on interstate differences in total expenditures and federal contributions. As an example of the variability, on June 30, 2004, three states housed more than 60% of their total residential care population in ICF-MR certified settings, and 26 states housed 20% or less of their residents in ICFs-MR. Obviously states with disproportionately high placement rates tended to account for disproportionate amounts of total ICF-MR expenditures.

Variations in per resident costs. Average cost expended per ICF-MR resident is also a key factor in total expenditures. Table 3.4 shows the enormous variations among states in the average per resident expenditures for ICFs-MR. The national average expenditures for ICF-MR services per recipient in FY 2004 (total ICF-MR expenditures in the year divided by the number of average daily recipients in 2004) was \$112,762 per year. Among the states with the highest per recipient expenditures in 2004 were Connecticut (\$216,851), Maine (\$246,131), Massachusetts (\$202,640), Missouri (\$202,912), New York (\$275,687) and Oregon (\$265,618). Among the states with the lowest per recipient expenditures were California (\$68,526), Minnesota (\$69,091), Texas (\$66,913) and Utah (\$68.937). The effects of relatively high per resident expenditures are straightforward. Maine, New York, Oregon had 8.5% of all ICF-MR average daily residents in FY04, but accounted for 22.2% of total FY 2004 ICF-MR expenditures.

#### Medicaid HCBS Recipients

The Medicaid Home and Community Based Services (HCBS) program is associated with the ICF-MR program through its dedication to persons who but for the services available through the Medicaid HCBS program would be at risk of placement in an ICF-MR. Between enactment of the Medicaid HCBS program in 1981 and June 30, 2004, all states have received authorization to provide Home and Community Based Services as an alternative to ICF-MR services. This growth in state participation is shown in Table 3.5.

At the end of the HCBS program's first year on June 30, 1982, there were 1,381 HCBS program participants. By June 30, 1987 there were 22,689 HCBS recipients. On June 30, 1992 there were 62,429 persons with ID/DD receiving Medicaid Home and Community Based Services. In just two years between June 30, 1992 and June 30, 1994, states nearly doubled again the number of HCBS recipients, with an increase of 95.5% to 122,075 residents. Between June

#### Table 3.5b Summary Statistics on HCBS Recipients by State on June 30 of Years 1995 through 2004

sons with ID/DD receiving Medicaid Home and Community Based Services. In just two years between June 30, 1992 and June 30, 1994, states nearly doubled again the number of HCBS recipients, with an increase of 95.5% to 122,075 residents. Between June 1994 and June 1996 HCBS recipients increased by 55.8% to 190,230 persons. Between June 30, 1996 and June 30, 1999 HCBS recipients increased another 37.6% to a total of 261,788 persons. Between June 30, 1999 and June 30, 2004 HCBS recipients increased by 163,067 (62.3%) to 424,855 individuals.

States with the greatest increase in total recipients between June 1990 to June 2004 were California (53,905), Florida (21,464), New York (51,427), and Pennsylvania (23,253). Between June 1990 and June 2004, all states more than doubled HCBS recipients.

#### **Expenditures for HCBS Recipients**

Table 3.6 shows the total annual Medicaid expenditures for HCBS by state and national totals in each of the FYs 1987 through 2004. In the seventeen years between June 30, 1987 and June 30, 2004, the number of states providing HCBS increased from 35 to 51. During the same period, HCBS expenditures increased from \$293,938,668 to \$15,505,753,695 (5,175.2%) as the number of HCBS recipients rose from 22,689 to 424,855 recipients (1,772.5%). New York's HCBS expenditures of \$2,517,127,492 (16.2% of the U.S. total) were the highest among all the states in 2004. By contrast, in 1987, California led all states with HCBS expenditures of \$42,499,500 (14.5% of the U.S. total).

Table 3.7 presents FY 2004 statistics for HCBS expenditures across states including total expenditures, federal expenditures, per participant average annual expenditures, per capita annual HCBS expenditures (HCBS expenditures per resident of the state), and each state's proportion of the federal HCBS expenditures. FY 2004 HCBS expenditures were \$15,505,753,695 for 424,855 end-of-year HCBS recipients. FY 2004 expenditures divided by end of year HCBS recipients yielded an "average" cost per recipient of \$36,497 Because large numbers of persons were being added to the HCBS program during FY 2004, this statistic underestimates the annualized average cost. Assuming persons were being added to the HCBS program at an even rate all through the year, the estimated average number of HCBS participants during the year was 413,647. This yields an annualized average expenditure of \$37,486. The unadjusted "average" HCBS expenditure of \$36,497 represents a 71.9% increase over June 30, 1990, when HCBS expenditures were 846 million dollars for 36,564 recipients or \$21,236 per recipient.

**Per capita cost variations**. Table 3.7 shows the variation among states in HCBS expenditures per citizen of the state. Nationally, in FY 2004, the average daily expenditure for HCBS per citizen was \$52.80. The average varied from more than twice the national average in seven states (Connecticut, Maine, Minnesota, New York, Rhode Island, Vermont and Wyoming) to one-third or less of the national average in four states (District of Columbia, Mississippi, Nevada, and Texas). The variability in total and per citizen expenditures among states is affected by both the number of persons who received HCBS and the amount of money spent per recipient.

**Variations due to differences in per recipient expenditures**. The average expenditures per HCBS participant is also a key factor in interstate differences in total expenditures. Table 3.7 shows the substantial variations among the states in the average per participant expenditures. The national average expenditures for HCBS per recipient in FY 2004 (total HCBS expenditures divided by average daily recipients) was \$36,486. Among the states with the highest per recipient expenditures in 2004 were Alaska (\$63,342), Connecticut (\$67,431), Delaware (\$74,048), Maine (\$72,299) and Rhode Island (\$76,677). The states with the lowest per recipient expenditures were District of Columbia (\$14,796) and Mississippi (\$15,388).

Variations due to disproportionate HCBS use. Variations in HCBS utilization rates across states have an important direct effect on interstate differences in total and per capita expenditures. Nationally, on June 30, 2004, HCBS recipients were 80.3% of the total HCBS and ICF-MR recipient population. In two states HCBS recipients made up less than 45% of combined HCBS and ICF-MR recipients, while in 19 states HCBS recipients were more than 90% of the total HCBS and ICF-MR populations.

#### HCBS Recipients and Residents of Community ICFs-MR

Table 3.8 summarizes the combined use of the Medicaid HCBS and ICF-MR to provide community services within the individual states. On June 30, 2004 there were 424,855 people receiving Medicaid HCBS services and 40,692 persons living in community ICFs-MR. This combined total of community Medicaid service recipients (465,547) was 87.9% of the

#### Table 3.8 HCBS Recipients and Community ICF-MR Residents by State on June 30, 2004

529,381 total of all HCBS and ICF-MR recipients. In all of the 51 states the majority of recipients of the Medicaid-financed long-term care for persons with ID/ DD were served in HCBS or ICF-MR funded community programs. Forty-five states were serving threequarters or more of their Medicaid-financed long-term care recipients with ID/DD in community settings. Figure 3.5 shows this variation on a state-by-state basis.

Figure 3.6 shows the total of large (16 or more residents) state and nonstate ICF-MR residents, community state and nonstate ICF-MR residents, and HCBS recipients for 1982, 1987, 1992, 1997 and 2004. It shows the dramatic increase in Medicaid community service recipients from 1982 to 2004, from 9,985 to 465,547. It also shows the substantial decrease of the population of large ICFs-MR from 1982 to 2004, from 130,767 to an estimated 63,834.

### ICF-MR and HCBS Recipients and Expenditures

Medicaid Intermediate Care Facilities (ICFs-MR) and Home and Community Based Services (HCBS) share common eligibility criteria and are intended to serve the same general population. Yet, as reported in Table 3.9, expenditures for ICF-MR and HCBS services tend to be disproportionately higher in the former. In 2004, nationally, HCBS recipients made up 80.3% of the total HCBS and ICF-MR recipient population but used only 56.5% of total HCBS and ICF-MR expenditures. FY 2001 was a milestone in that for the first time ever, HCBS expenditures were greater than for ICFs-MR.

HCBS and ICF-MR recipients and expenditures varied among individual states but in most states the HCBS share of total expenditures was disproportionately low when measured against the HCBS share of total recipient population. In two states (District of Columbia and Mississippi), HCBS recipients as a proportion of all recipients exceeded HCBS expenditures as a proportion of all expenditures by a factor of 3 or greater.

Direct comparisons of the costs of ICF-MR and HCBS approaches to financing residential services are complicated by a number of factors. In some states, disproportionately higher expenditures for ICF-MR recipients may be explained by artificially inflated institutional costs resulting from deinstitutionalization. The consistent pattern of relatively lower expenditures for HCBS recipients in some states is an intended and controlled program goal. In almost all states substantial numbers of HCBS recipients live in their fam-

ily homes (an estimated 43.4% nationally), reducing long-term care costs by the relative value of the supports provided by family members and other non-paid support providers. Somewhat related, children and youth are more likely to be served under HCBS than ICF-MR and as a result "day program" costs are more likely to be covered by educational agencies. In addition, although federal regulations require that both HCBS and ICF-MR recipients meet the same eligibility criteria and level of care needs, in actual practice some state HCBS tend to be a less intensive service than ICF-MR, making HCBS in some states, almost by definition, less costly than ICF-MR. Finally, because Medicaid law specifically prohibits HCBS financing of room and board costs, HCBS recipients pay for such costs through their own funds, typically from Social Security Act cash benefit programs. These individual "contributions" to room and board represent approximately \$6,500 per HCBS recipient per year, and can be even higher because of state supplements.

#### Variations in State Financial Benefit for Combined ICF-MR and HCBS Programs

As in all Medicaid programs, the federal government shares the costs of the ICF-MR and HCBS programs with the states as a function of the state per capita income relative to national per capita income (see Table 3.7 for 2004 federal contributions or "match" rates). Relatively rich states share total expenditures on an equal basis with the federal government; relatively poor states may have federal involvement in financing Medicaid services up to 83% (Mississippi's 80% was the highest federal share in 2004). It is often presumed, therefore, that the extent to which states benefit from ICF-MR and HCBS program participation is directly related to their general need for assistance as reflected in the federal Medicaid cost share ratio. Because states vary considerably in their ICF-MR and HCBS utilization rates, proportions of ICF-MR and HCBS recipients, and expenditures per recipient, some variation is expected among states in relative benefit from federal matching funds beyond that built into the actual cost-share rate for Medicaid. To assess the differences among states in their relative "return" on current contributions to Medicaid, a "state benefit ratio" was computed. The state Medicaid benefit ratio in Table 3.10 represents a ratio of all federal ICF-MR and HCBS reimbursements paid to each state divided by the proportion of all dollars contributed to the program through personal income tax paid by citizens of the state. Obviously not all federal revenues for the Med-

# Table 3.10 Summary of Combined ICF-MR and HCBS Contributions and StateBenefit Ratios by State for Fiscal Year 2004

\* Most recent data available is from: "Tax Year 2001: Expanded Unpublished Version from IRS Tax Statistics"

icaid program come exclusively through personal income tax, but, despite the oversimplification, the index provides a way of assessing the balance between state contributions to the federal government for ICF-MR and HCBS programs and federal reimbursements back to the states.

Table 3.10 shows that in FY 2004, nine states got back over two dollars in federal reimbursements for every dollar contributed. Five states got back less than \$0.50 in reimbursements for every dollar contributed. Among the 33 states showing a favorable "State Benefit Ratio" (state's percentage of total federal ICF-MR reimbursements divided by state's percentage of total federal income tax payments being greater than 1.00), were all but two (Arkansas and District of Columbia) of the 15 poorest states (with federal Medicaid matching rates of 70% or greater). Only three of the thirteen "richest" states with federal Medicaid matching rates of 52.95% had a favorable "state benefit ratio" (Connecticut, Minnesota and New York). Therefore, while differential ICF-MR and HCBS utilization and average costs may still allow that a poor state like Arkansas (with a federal cost share of 78% and a benefit ratio of .94) subsidizes the combined ICF-MR and HCBS expenditures of a relatively wealthy state like New York (with a federal cost share of 52.95% and a benefit ratio 1.88), the highly favorable Medicaid federal/state cost share for the poorer states has been effective in establishing a general tendency for them to receive more federal funds for long-term care for persons with ID/DD than they contribute through federal income tax.

#### **Indexed Utilization Rates**

Table 3.11 presents the number of ICF-MR residents and HCBS recipients in each state per 100,000 of that state's population, along with national totals. On June 30, 2004 there were 35.6 ICF-MR residents per 100,000 of the national population. That included 13.9 persons per 100,000 in community ICFs-MR (6.6 in places with 6 or fewer residents and 7.3 in places with 7-15 residents) and 21.7 persons per 100,000 in large ICFs-MR. There was rather remarkable variation in utilization among the states. The District of Columbia had the highest utilization rate nationally, with 134.8 ICF-MR residents per 100,000 population, followed by Louisiana with 120.5 residents per 100,000 population. Ten states had more than 150% of the national rate. In contrast, 18 states were less than 50% of the national rate.

On June 30, 2004 there were 144.7 HCBS recipi-

ents per 100,000 of the national population. Variations among states were very large. There were 15 states with more than 200 HCBS recipients per 100,000 of the state's population. Texas. with 50 HCBS recipients per 100,000 of the state's population, reported the lowest HCBS utilization rate.

Combined ICF-MR and HCBS utilization for persons with ID/DD also showed high interstate variability. Nationally on June 30, 2004 there were 180.3 ICF-MR and HCBS recipients per 100,000 of the nation's population. One state (North Dakota) had a rate more than twice the national utilization rate. Kentucky and Nevada each had combined ICF-MR and HCBS rates that were less than half the national rate. Figure 3.7 shows the variation among states in the number of combined ICF-MR and HCBS recipients per 100,000 of their state population.

Utilization rates for Medicaid community services (both HCBS and community ICFs-MR) were 158.5 per 100,000. Kentucky, Nevada and Texas had rates that were less than half the national average; two states had rates that were more than twice the national average: Minnesota (319.1) and North Dakota (488.5). Figure 3.8 shows this variation on a state-by-state basis.

It is important to recognize that some of the variability among states in the utilization of Medicaid ICF-MR and HCBS services is a reflection of the size of state residential systems in general. On June 30, 2004 states had an average total utilization rate for all residential services (both Medicaid and non-Medicaid) of 143.1 per 100,000. States varied from 56.7 residential service recipients per 100,000 in Georgia to 305.8 in North Dakota. While states vary markedly in their total utilization of residential placements for persons with ID/DD, state policy decisions create even greater variability in their relative utilization of Medicaid ICF-MR and HCBS programs to finance those services.

Figure 3.9 shows patterns of overall U.S. residential services and ICF-MR services utilization from 1962 to 2004. It shows the decreasing ICF-MR utilization rates since 1982. It also shows the steadily increasing overall residential services utilization rate since 1987, when residential services utilization reached 105.1 service recipients per 100,00 of the general U.S. population. It is notable that while the residential utilization rate was increasing by 38 residents per 100,000 in the U.S. population in the seventeen years between 1987 and 2004, the ICF-MR utilization rate decreased by 23.7 residents per 100,000 in the gen-

Table 3.11 Utilization Rates per 100,000 of State Population for ICF-MR, HCBS and All Residential Service Recipients by State on June 30, 2004

\* excludes service recipients living in their family homes

\*\* Source: US Census Bureau, Population Estimates Program, July 1, 2004.

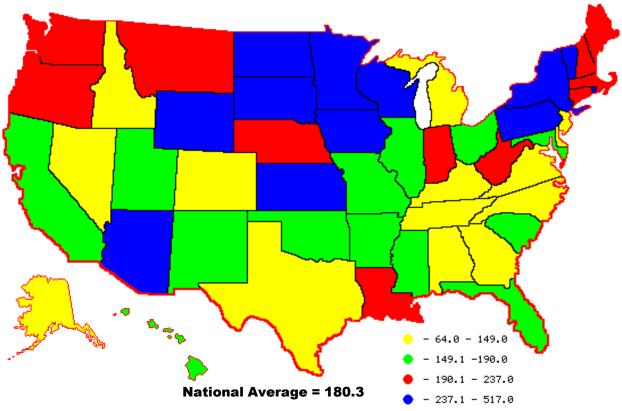

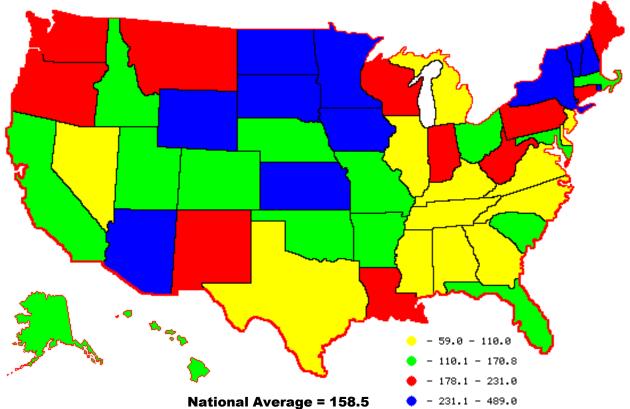

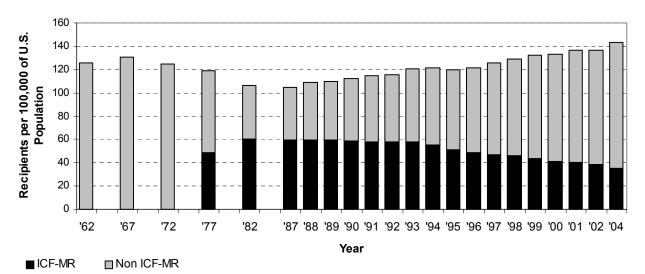

Figure 3.7 Total ICF-MR and HCBS Recipients per 100,000 of State Population by State on June 30, 2004

Figure 3.8 Total Community ICF-MR and HCBS Recipients per 100,000 of State Population by State on June 30, 2004

### Figure 3.9 ICF-MR and Non ICF-MR Residential Service Recipients per 100,000 of the U.S. Population, 1962 to 2004

eral population.

The aging of the "baby boom" generation into adulthood has been a primary driving force of increasing overall placement rates and is contributing to the growing number of people waiting for services. As shown in Table 3.12, the HCBS program played a major role in funding the residential services of persons not living in ICFs-MR, with an estimated 56.6% of HCBS recipients receiving residential services outside of a home shared with relatives. Applying that statistic to all 424,855 HCBS recipients on June 30, 2004 would yield an estimated 240,468 persons or 81.9 persons per 100,000 of the U.S. population, receiving residential services outside their family home financed by Medicaid Home and Community Based Services. This means that an estimated 82.1% of residential services placements are financed by ICF-MR or HCBS.

#### Residential Arrangements of HCBS Recipients

Forty-four states (with 64.7% of HCBS recipients) were able to provide in whole or part, the type of residential situation in which most HCBS service recipients lived. These reports are summarized in Table 3.12 by state and residential arrangement. A reported 30.3% of HCBS recipients lived in a residence owned, rented, or managed by an agency, in which agency staff provide care, instruction, supervision, and support to residents with ID/DD. The estimated national total of HCBS recipients living in such arrangements was 128,731. The most frequently utilized residential arrangement of HCBS recipients was living in a home that was also the home of other family member(s). An estimated 184,386 HCBS recipients (43.4% of the total) lived with other family members.

The third largest group of HCBS recipients (18.2%) on June 30, 2004 lived in their own homes (i.e., homes rented or owned by them to which persons come to provide personal assistance, supervision and support). An estimated 77,326 persons lived in their own homes.

The fourth largest group of HCBS recipients, an estimated 29,739 persons (or 7.0% of HCBS recipients), lived in family foster or host family homes (i.e., homes rented or owned by a family or individual in which they live and provide care to one or more unrelated persons with ID/DD). A small proportion of HCBS recipients (1.1%) were reported to be served in "other" types of residential arrangements.

Between 1994 and 2004 there was a notable increase in the proportion of HCBS recipients reported to be living in their family home or in their own homes. The estimated proportion of HCBS recipients living with parents or other relatives increased from 23.8% to 43.5% over the ten years. Between 1994 and 2004 the proportion of HCBS recipients living in homes that they themselves rented or owned increased from 11.1% to 18.2%.

### Persons with ID/DD in Medicaid Nursing Facilities

Table 3.13 presents statistics on people with ID/DD reported in "Medicaid certified nursing facilities (NFs) not primarily for persons with ID/DD." The ability of

 Table 3.13 Persons with ID/DD in Nursing Facilities by State on June 30, 2004

number of NF residents with ID/DD in FY 2004. The estimated national total of 32,899 nursing facility residents in June 30, 2004 is a decrease (6.0%) from the 35,005 residents reported in FY 2003.

Persons with ID/DD in NFs were 5.9% of the combined total of all persons with ID/DD in NFs, ICFs/MR and Medicaid Home and Community Based Services programs and 7.3% of all persons with ID/DD in residences for persons with ID/DD and NFs. For FY 2004, six states reported persons with ID/DD living in NFs as more than 10% of the total of their combined ID/DD residential program residents and NF residents with ID/DD.

### Combined Per Person ICF-MR and HCBS Expenditures

Table 3.14 presents for each state and the U.S. the average per person annual expenditures for the combined Medicaid ICF-MR and HCBS programs for persons with ID/DD for FY 2004 and for comparison purposes FY 1993. Per person expenditures were computed by adding the total expenditures for the ICF-MR and HCBS programs for the fiscal year and dividing that total by the total ICF-MR and HCBS service recipients on June 30 of that year. In FY 2004 the average per person expenditures for the combined ICF-MR and HCBS programs was \$51,826. This compares with \$48,505 per person in FY 1993. The 6.8% increase in average per person Medicaid long-term services and supports (LTSS) expenditures between FY 1993 and FY 2004 was less than one-quarter of

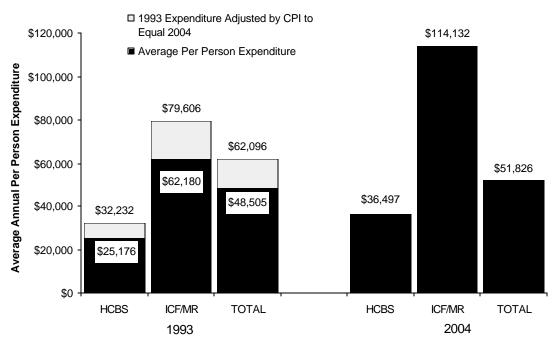

the 28.0% increase in the Consumer Price Index (CPI) and was about one-eighth of the 54% growth in Medical Care Index reported by the Bureau of Labor Statistics (US Bureau of the Census, 2005). In CPI-adjusted dollars, the average annual per person Medicaid expenditure decreased by 23.9%. (The 1993 average per person expenditure of \$48,505, when adjusted for CPI inflation [\$48,505 x 1.2802] was \$68,096 in 2004 dollars).

As shown in Figure 3.10, between FY 1993 and FY 2004 the average ICF/MR expenditures increased from \$62,180 to \$114,132 (83.6%) and the average per person HCBS expenditures increased from \$25,176 to \$36,497 (45.0%). What caused the low rate of growth in the combined ICF-MR and HCBS average per person expenditures was the shift from ICF-MR to HCBS as the primary Medicaid program for financing long-term services and supports for persons with ID/DD. In 1993, 63.0% of 234,333 Medicaid LTSS recipients with ID/DD were enrolled in the more costly ICF-MR option; by 2004 only 19.7% % of the 529,381 total ICF-MR and HCBS recipients were residing in ICFs-MR.

#### ICF-MR and HCBS for Persons with ID/DD as a Proportion of All Federal Medicaid Expenditures

Between 1992 and 2004 most of the growth in federal Medicaid expenditures for ICF-MR and HCBS for per-

#### ICF-MR and HCBS for Persons with ID/DD as a Proportion of All Federal Medicaid Expenditures

Between 1992 and 2004 most of the growth in federal Medicaid expenditures for ICF-MR and HCBS for persons with ID/DD was due to growth in expenditures for HCBS. In FY 1992, states received \$888,900,000 in federal reimbursements for Medicaid HCBS services for persons with ID/DD. By FY 1994 federal reimbursements for Medicaid HCBS services had more than doubled to \$1,665,390,500. In the ten years between FYs 1994 and 2004 federal reimbursements for Medicaid HCBS increased five-fold to \$9,206,408,708 Although ICF-MR populations decreased between June 1992 and June 2004 from 146,260 to 104,526 residents, there was an increase in federal ICF-MR reimbursements from \$5.08 to \$7.13 billion. This increase of \$2.05 billion over the twelve years compared with a \$8.51 billion increase in federal HCBS reimbursements over the same period.

Because Medicaid long-term care services are being steadily transformed from ICF-MR to HCBS programs, by rapid growth in new HCBS recipients, by moving people out of ICFs-MR, and by converting community ICFs-MR into HCBS financed community settings, it is instructive to examine federal allocations to the combined ICF-MR and HCBS programs for persons with ID/DD. Doing so stimulates two observations. First, long-term care payments for persons with ID/DD make up a substantial and disproportionately large amount of total federal Medicaid expenditures (i.e., per recipient costs for persons with ID/DD receiving long-term care are much greater than the per recipient Medicaid costs for the general Medicaid population). Second, the proportion of total federal Medicaid expenditures going to the ICF-MR and HCBS programs for persons with ID/DD has remained in a fairly stable range over the past two decades (between about 9% and 12% of federal Medicaid expenditures).

As shown in Table 3.15, federal expenditures for Medicaid ICF-MR and HCBS programs for persons with ID/DD increased by 347.9% between 1988 and 2004 (increased by \$12.69 billion dollars from \$3.65 billion dollars). These increases contributed significantly to the overall growth in total federal Medicaid expenditures. Still, the annual average growth rate of federal ICF-MR and HCBS expenditures for persons with ID/ DD between 1988 and 2004 (21.7%) was substantially less than the overall Medicaid growth rate. As a result, federal reimbursements for the ICF-MR and HCBS programs for persons with ID/DD decreased from 12.0% to 9.7% of all federal Medicaid expenditures.

Between 1998 and 2004 the decrease in the proportion of federal ICF-MR and HCBS expenditures within the total Medicaid program (from 10.2% to 9.7%) was primarily attributable to the relatively large growth in total Medicaid expenditures during the six-year period (75.6%), as compared with the 67.3% increase in combined ICF-MR and HCBS expenditures. Between 2000 and 2004 federal payments for ICF-MR and HCBS programs for persons with ID/DD increased by 48.0%, more than the 45.6% increase in all Medicaid expenditures between 2000 and 2004.

Despite their generally stable proportion of all federal Medicaid expenditures, it is hard to overlook the disproportionately high expenditures for ICF-MR and HCBS recipients with ID/DD in comparison with the average for all Medicaid recipients. In 2004 the average expenditure for each Medicaid beneficiary was an estimated \$5,170 (based on Report of 54.6 million to total Medicaid beneficiaries in 2004 reported in "Med-Beneficiaries" icaid Enrollment and at www.cms.hhs.gov/researchers/pub/datacompendium/ current). This is compared to an average expenditure of \$51,826 for each ICF-MR and HCBS recipient with ID/DD (excluding medical services).

### Medicaid ID/DD Expenditures Within the Larger State Medicaid Programs

Table 3.16 presents a summary of Medicaid ICF-MR and HCBS expenditures by state as a portion of all Medicaid long-term care and all Medicaid expenditures. The statistics on all Medicaid expenditures were provided by Brian Burwell of the Medstat Group from CMS Form 64 reports and are presented here with permission. States varied considerably in FY 2004 in the proportion of all Medicaid long-term care expenditures that went to HCBS and ICF-MR services for persons with ID/DD. On average, 30.7% of states' Medicaid total long-term care expenditures were for HCBS and ICFs-MR for persons with ID/DD. In two states less than 20%, and in nine states more than 40% of all Medicaid long-term care expenditures were for persons with ID/DD who received ICF-MR or HCBS services.

State and federal ICF-MR and HCBS expenditures for persons with ID/DD equalled 9.7% of all state and federal Medicaid expenditures. States varied from more than 20% in three states to 4.0% in one state.

### HCBS and ICF-MR Expenditures, by State, between 1994 and 2004

Table 3.17 shows the annual expenditures in thousands of dollars for HCBS, ICF-MR and combined totals, by state, in the years 1994 to 2004. Nationally, HCBS expenditures increased by \$12,534,128,600 (an average annual increase of (\$1,253,412,860) over the ten year period. ICF-MR expenditures increased by \$2,707,492,680 (an average annual increase of \$270,749,268). Combined expenditures more than doubled from 1994 to 2004 from \$12,193,882,600 to \$27,435,503,800 (an average annual increase of \$1,524,162,120). Indiana had the highest percentage increase in HCBS expenditures (9,754%) and New Hampshire had the lowest increase (92%). West Virginia had the highest ICF-MR expenditure increase (280%) and Alaska has had no ICF-MR expenditures since 1999. Combined expenditures increased by the greatest percentage in West Virginia (478%) and the least percentage in Iowa (26%).

# Section 4

State Profiles of Selected Service Indicators, 1977-2004

# Chapter 10

#### Profiles of Trends in State Residential Services by State

Kathryn Coucouvanis, K. Charlie Lakin, and Robert W. Prouty

Each year the Residential Information System Project (RISP) receives requests from more than half of all states for trend data on specific aspects of their state's residential services system. These requests come from state agencies, advocacy and consumer organizations, service provider groups and others. Responses to these requests utilize statistics that have been collected by the Research and Training Center on Community Living since 1977. In this chapter, some of the statistics that are frequently requested have been used to create a "profile" for each state and for the United States as a whole. The data points are for June 30 of each year shown on the profiles unless otherwise noted. On occasion states have not been able to provide an updated report for each year of the RISP survey. In such instances statistics from the previous year have been repeated and the year has been marked with an asterisk (\*). The statistics included in each state profile include: a) the number of persons with intellectual disabilities and developmental disabilities (ID/DD) living in residential settings of different sizes; b) the number of persons with ID/DD receiving residential services per 100,000 of the state's population; c) state ID/DD large facility populations; d) average daily state ID/ DD large facility per diem rates; e) percentage of state ID/DD large facility residents who are children and youth (0-21 years old); f) the number of residents of

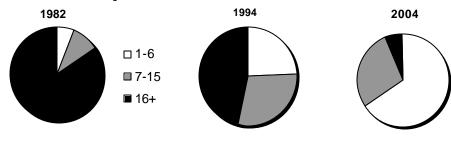

Intermediate Care Facilities (for people with) Mental Retardation (ICF-MR); g) the number of persons with ID/DD receiving Medicaid Home and Community Based Services (HCBS); and h) the number of persons with ID/DD living in Medicaid-certified generic nursing homes.

The statistics presented in the state profiles for 1977 and 1982 come from national surveys of individual residential facilities in those years. The sites surveyed included all residential settings that were identifiable as being state-licensed or state-operated to serve persons with intellectual disabilities and other developmental disabilities. Data for 1987 to 2004 come from annual surveys of state ID/DD, Medicaid and other relevant program agencies. The former studies' outcomes were shaped by state licensing data bases, while the latter studies relied on state information systems. In most states these two approaches included the same settings. But a few states' residential programs that serve significant numbers of persons with ID/DD are operated as generic programs without involvement of and information to the state agency that has general program responsibility for persons with ID/DD. In these few states the 1977 and 1982 data were inclusive of a wider range of residential settings than were the data for 1987 and later.
